Download from Toyota.comManual DescriptionDriving in distance control mode from vehicle to vehicle: This mode uses radar to detect the presence of vehicles up to approximately 328 feet (100 m) ahead, identifies the current vehicle to the vehicle following distances, and works to maintain a suitable next distance from the vehicle ahead. The required distance between the vehicle and the vehicle can also be established by operating a distance switch from vehicle to vehicle. When the vehicle is detected running ahead of you, the system automatically slows down your car. If you need to reduce the speed of the vehicle, the system uses brakes (at this time will prepare stop lights). The system will respond to changes in the speed of the vehicle ahead in order to maintain the distance from the vehicle to the vehicle set by the driver. An approach warning alerts you when the system can't slow down enough to prevent your car from closing in on the vehicle in front. When the vehicle in front of you stops, your car will also stop (the vehicle is stopped by the control system). Once the vehicle in front is launched, pressing the SEE switch or bending the accelerator pedal (launching the operation) will resume subsequent cruising. If the startup is not performed, system control continues to keep your car stopped. Toyota Avensis 1997 - 2005: repair, maintenance and owner manual, diagram wiring - free PDF download.
