Order of draw phlebotomy 2020

Blood samples must be taken by phlebotomists in a specific order to avoid cross-contamination of the sample by additives contained in different collection tubes. The order of collection of phlebotomy is the same for samples taken with a syringe, tube holder or tubes taken in advance at the time of collection. The following is the order of collection: Blood culture tube or bottle Sodium citrate (e.g. blue closure) Serum tubes, including tubes with clot activator and gels (e.g. red, red-spotted, gold caps) Heparin tube with or without gel (e.g. dark green, light green, spotted green caps) EDTA tube with or without gel separator (e.g. lavender, pearl, pink caps) Sodium fluoride/glycolytic inhibitor of potassium oxalate (e.g. grey cap) The location of the tubes not listed here should take into account the possibility for their additive to change the results obtained from the next tube should there be transfer. Plastic serum tubes containing a precipitate activator may interfere with coagulation testing. Only blood culture tubes, glass non-additive serum tubes or plastic serum tubes without a precipitate activator may be taken in front of the coagulation tube. During the collection and handling of blood samples, a number of avoidable errors may occur that pose significant risks to the patient and the phlebotomist. If global standards are not fully implemented, patients are more likely to be injured during the procedure, biologically representative samples will not be obtained from patients and test results will not be comparable from one facility to another. CLSI GP41 — The collection of diagnostic vesicular blood samples provides a descriptive, gradual process and procedures reflecting the format of the basic quality systems for the diagnostic collection of vesicular blood samples. Specific considerations are included on collections from vascular access facilities, blood culture collection and collections in an isolated environment, as well as on how to manage emergencies. The Extended Annex provides useful tips for sampling paediatric and other demanding patients. . . . Go Back Home » Resources » Phlebotomy Order drawAs you may already know blood must be taken and taken in tubes in a specific order, known as draw order. This is necessary to avoid cross-contamination of the ingredients between the pipes. Unfortunately, this order can be difficult to remember for those who are in training and even for those on the field.*Tip: Bookmark this page for future use pin as an image! Everyone learns effectively and remembers in different ways. That's why we've designed a few learning tools below to help you learn the right drawing order and easily remember it in the field.*Tip: If you're looking for a handheld size guide that's could carry you with you the field that gives you quick access to order draw and other important information then you have to check the best selling Phlebotomy Notes: Pocket Guide to Blood Collection.Order of Draw ChartBlood Draw OrderTube ColorDescription1Color VariesBlood Cultures2Light BlueSodium Citrate3RedClot Activator4GoldSST5Light GreenLithium Heparin6Dark GreenSodium Heparin7LavenderEDTA8GraySodium Flouride9YellowACD SolutionSources: [1], [2]Order Of Draw AcronymSometimes trick to remember a lot of information is to create an acronym. This helps spread the information into easy-to-remember pieces with enough information in each block to help you remember a larger picture. Acronyms are not carved into stone, and you can create your own shortcut to help you easily remember the order of blood collection. Below is a simple and easy-to-remember shortcut that you can use right away. This will help you remember the order of blood collection along with the color of the tube when performing venipuncture. The acronym is Boys Love Ravishing Girls Like Dieters Love Greek Yogurt! Boys – Blood CultureLove – Light BlueRavishing – RedGirls – GoldLike – Light GreenDieters – Dark greenLove – LavenderGreek – GrayYogurt – YellowFeel switch for free to make it easy for you to remember. Drawing order Infographic We have compiled the above information in an easy-to-understand infographic so that you can easily save or share it. Order Draw QuizUse the chart below to take the quiz yourself to the correct draw order. Click show/hide all to hide the color and descriptions of the pipes. Then simply scroll down the list in order and recite each color of the tube and its appropriate description. To check your response, simply click the appropriate color and descriptive cell (the gray box to the right of the order draw number) and it will appear. good luck!
