Mogul Compag H. Frystyk W3C/MIT L. Masinter Xerox P. Leach Microsoft T. Berners-Lee W3C/MIT June 1999 Hypertext Transfer Protocol -- HTTP/1.1 Status of this memo This document sets out an Internet standards monitoring protocol for the Internet community and calls for discussion and suggestions for improvements. Refer to the current version of the Official Internet Protocol Standards (STD 1) for the standardization status and status of this protocol. The distribution of this memo is unlimited. Copyright Statement Copyright (C) The Internet Society (1999). All rights reserved ID: 445F6 Summary The Hypertext Transfer Protocol (HTTP) is an application-level protocol for distributed, collaborative, hypermedia information systems. It is a general, state-of-the-art protocol that can be used for many tasks beyond its use for supermatant, such as name servers and distributed object management systems, by extending its request methods, error codes, and headers [47]. An HTTP feature is typing and negotiating data representation, allowing systems to be created regardless of the data transferred. HTTP has been used by the World Wide Web Information Initiative since 1990. This specification defines the protocol referred to as HTTP/1.1 and is an update to RFC 2068 [33]. Fielding, et al.
