October 10, 2020 Version 2.19.2 Binance App - Trading Bitcoin and Cryptocurrencies with ease with our crypto app. This update -: Error Fix and Improve Hi there, please fix this as soon as possible, there is this strange error with stop-limit orders where stop and marginal prices are not reflected in the equivalent section and spoils the order and and btc section equivalent section in stop-limit continues to reflect the market price no matter what! Limit and market orders work properly, but the stop limit section has big problems! Check it out as soon as possible. GUI exchanges are cluttered. I ended up touching something I didn't want to touch because all the buttons were close together. I understand that they want it to be convenient by putting everything in the open, so nothing is hidden, but it just makes everything dirty. Add a menu and you can make room on gui. It is difficult to increase and decrease the price of coins we sell in exchange without hitting something else and causing the screen to swipe. The same goes for the amount of buttons to increase and reduce the number of coins that we sell and buy on the exchange screen. Also, ID would like to be able to see the market/price history on the screen buy/sell so I can see how much the coin was sold last month as I'm pricing it for sale without having to change screens and move to another market tab to deal with prices. And the most important thing should be a note when selling coins that there is a minimum of 0.1 before we go to sell our coins. I spent time creating a coin to sell just to find out then I didn't have enough coins to sell which wasted minutes of my time. Thus, the minimums and other rules should be visible at all times. Other than that, it's a good app. Four stars. In 2018, I opened a Binance account, and to this day they won't let me withdraw money from it. Every time I do a task to check who I am, they come up with another. Tell me the IP you first logged in from 2018 and the date. Send us an ID pic. Oh, not that one other species. Oh, not that he's dirty. Now we're up to the point they're asking me for a few IDs, and recording VIDEO myself showing the date and IDs and I went into the page and they still meet back saying things like Oh, you didn't say it right and you should also video your story output (which doesn't exist because they don't let me go. PLEASE keep yourself frustrated and don't invest in this site it's possible you'll never get it. Developer of the app site Support privacy policy Binance app download. Download Binance.US - Bitcoin and Crypto and enjoy it on iPhone, iPad and iPod touch. Welcome to the home of America to buy, trade and earn digital assets such as Bitcoin and Ethereum! Start work today and buy Bitcoin, Ethereum, Binance Coin, Tezos, Cardano, Link and more, all with some of the lowest transaction fees in America. Please make sure that this app is marked as trusted on your phone. Open Settings Select General Device Management Choice Select Trust in Hunan Shituo Technology Development Co., LTD 4. Your app is ready for use right now. Don't have a Binance account yet? Click here to register! Learn how to trade on Binance Advertising 50 Bitcoin that hasn't moved since 2009 were trades today. Some Bitcoin watchers suggest that these coins belong to Satoshi Nakamoto. The coins were from Bitcoin mining about a month after the network was created. BTC from the early days of the network moved today. Can Bitcoin maker Satoshi Nakamoto stand behind the transaction? Was Satoshi behind the recent Bitcoin transaction? The 50 BTC transaction, which is a lock-block fee a month after the launch of the Bitcoin network, has moved today. The coins were awarded for mining block 3654. Some scientists, of course, associated this early mining activity with the inventor of bitcoin under the pseudonym Satoshi Nakamoto. Others are not convinced that the head of the Unit's research department, Larry Chernak, believes that the deal is not related to Satoshi Nakamoto, who identifies that there were several early miners on the Bitcoin network. The blocks, which are believed to have been mined by Satoshi, have a certain pattern in their non-traditional, cryptographic number that can help identify blocks. According to this scheme, these Bitcoins do not seem to have originated from Satoshi. Courtesy of satohiblocks.info, Patoshi Blocks Another analyst noted that the deal marks the first time that the early 2009 origin of Bitcoin has moved since August 2017. However, the sleuths on the chain will closely monitor the trajectories, as the deal undoubtedly was from an early Bitcoin miner and a major holder. If these 50 BTC keep moving, then much more about this story will in recent weeks, the expansion of the range of Wall Street titans from Goldman Sachs to the New York Stock Exchange have made it clear that they are they in expanding their footprints in the booming universe of cryptocurrencies in various forms. While many market watchers believe that the entry of established Wall Street banks and stock market operators is positive for the alt-coin space, some analysts believe there are obstacles facing banks looking to expand their presence in the crypto space. Centrally refined derivatives can be a real test of margin and clearing house default procedures, especially if derivatives increase and cryptocurrencies demonstrate increased price volatility, Fitch Ratings said in a recent note. The Crypto-related derivatives currently available in the US are mostly limited to bitcoin futures, which debuted in December on Cboe and CME. Nasdaq is also considering launching bitcoin futures at some point. Other problems Some big names on Wall Street are covering digital assets. For example, Goldman Sachs recently made its first cryptocurrency rental and said it plans to use its own capital to trade bitcoin futures for clients. However, Fitch sees problems for banks wanting to take risks in digital currency derivatives. The sharp increase in the impact of financial institutions on cryptocurrency derivatives can challenge clearing centers and large financial institutions, clearing members in such a way that it was not associated with the introduction of new market products, - said in a statement of the rating agency. Cryptocurrencies are subject to extreme price volatility, which is exacerbated by a nascent, unregulated underlying market with a limited price history and no generally accepted principles of fundamental valuation. These factors make it difficult to calculate margins, especially those associated with short positions for which losses cannot be limited. Bitcoin futures, which are calculated cash, still have a light volume compared to other well-known contracts in the futures market. As of May 9, 2018, the open interests of xBT and BTC were modest at the level of 6,287 and 2,479 contracts, respectively, worth about \$59 million and \$116 million, respectively. However, if the problems associated with cryptocurrency trading are solved, including uncertainty regarding the regulatory framework, the volume of cryptocurrency derivatives may grow, Fitch said. Nasdaq Inc., one of the world's largest stock exchange operators, said it would consider launching a cryptocurrency exchange in the future if the regulatory environment promoted such a move. The view that cryptocurrencies such as BTC-BTSP bitcoin will be a future way to support trade is becoming increasingly mainstream, Nasdaq Chief Executive Officer Aden Friedman said in an interview after announcing better-than-expected quarterly revenue. Reuters. Earlier it was reported that Nasdaq will join Cboe Group and CME in the launch of bitcoin bitcoin Cboe and CME did so in December with some market watchers speculating the Nasdaq could follow suit in the current quarter. Earlier this year, the Nasdaq said it wanted to present bitcoin futures that differed from those of its competitors, but did not disclose a launch date. Waiting for regulation at the user level, part of the appeal of digital currencies is the decentralized and unregulated nature of the business, but more rules are needed for financial services firms to get involved. Banks and exchange operators such as Nasdaq are regulated at the federal level, and the current lack of federal rules regarding the cryptocurrency market makes it virtually impossible for these companies to have crypto-trading services for customers. But virtual currencies are still very easily regulated. This is part of the appeal to many early adopters, but will have to change if the Nasdaq is to run the cryptocurrency exchange. Friedman said, according to Reuters. On Wednesday, Nasdaq announced a partnership with Gemini. Gemini said that over the coming months we will be implementing Nasdaq's SMARTS market surveillance technology to monitor our market. The twins are currently offering trading in bitcoin and ethereum, but there has been some speculation the exchange may expand to offer other digital currencies. Currently, Gemini customers can trade in the following pairs: BTC/USD, ETH/USD and ETH/BTC. ET/BTC. binance ios app download
