Jeff Xu/Car and Driver Advertising - Continue reading below the Mazda MX-5 Miata There's a reason the Mazda MX-5 Miata has been on our 10Best Cars list so many times. When it comes to convertibles, the few cars available today are just as clearly focused on the pleasure of driving as the Miata. This is an authentic driver's car that is useful for both qualified drivers and those who just want an affordable convertible. The increase in power in 2019 makes the standard four-cylinder engine even more capable of providing the performance of sports cars, but the Mazda Miata has not lost any of its easy-to-use nature. It is a convertible in its purest form that makes this choice of editors one of the best convertibles available. Review, prices and specifications of the Porsche 718 Boxster Long-term resident of our list of 10Best cars and the choice of the winner's editors, too, the Porsche 718 Boxster remains the standard for high performance convertibles. If the Mazda Miata is the basis for a large convertible, the 718 Boxster is the best convertible taken to the extreme. The Boxster is every bit of a sports car like its 718 Cayman Coupe counterpart and is arguably the best. The sweet song of the previous flat sixes may disappear, but the new turbocharged four-cylinder will quickly become your friends with their considerable low power. Add precise steering and confident handling, and there's no better drive on a sunny day than a Porsche 718 Boxster from top to bottom. This is one of the best convertibles, hands down. Review, prices and specs of Mercedes-Benz E-Class We named Mercedes-Benz E450 in our list of 10Best cars because it does all well and that includes top-down driving. It's more than just a great top-down driver, though. It has an exquisitely designed interior and is a blast for driving, thanks to its 362-hp twin-turbo 3.0-liter V-6. You can adapt the E450 to match your driving mood, whether it's an energetic romp on a curvy ride or as a smooth interstate rocket ride. Put the top and the interior is quiet and snug. Every element of this Editor's Choice E-Class convertible exudes a premium look that makes each trip special. Review, prices and specifications of Mercedes-AMG E53 The old adage that you can never have too much good especially, in our estimation, to horsepower. The newly available Mercedes-AMG E53 pushes the E-Class into serious performance territory with its 429-hp straight six, which has both a turbocharger as well as an electric supercharger-more good stuff! In our testing, the E53 hit 60 mph in 4.1 seconds. There's plenty of technology on hand, too, with automated emergency braking, blind spot monitoring (especially useful with recharge), and a 12.3-inch digital panel Each E53 has all-wheel drive and suspension. Once again, Mercedes is able to combine performance and sophistication, earning it a place not only in our editor-in-chief's list in our 10Best list, too. Review, prices and specifications of the BMW 2-series It would be easy to call the BMW 2-series convertible a less serious version of its pint-sized sports coupe brother. But the truth is that even with a little extra weight on board, this choice of editor-in-chief winner is still the car driver throughout and through. Buyers can't get a raucous M2 in convertible form, but the available 248 hp 230i and 335-hp. M235i convertibles have all get up and get out of their coupe counterparts. Sharp handling, fast steering and instantaneous power make either the BMW model a joy for driving, up or down. The review, prices and specifications of the Mercedes-Benz C-Class Compact Dimensions, Powerful Engines, and elegant interior give the Mercedes-Benz C-Class convertible a sporty and pricey feel that makes it one of the best convertibles in its class. The C300 and its turbocharged four-cylinder offers sharp handling and strong acceleration, but its ride can be tight over the rough pavement. While its interior is beautiful and can be equipped with many upscale amenities, its back seat is cramped and really not suitable for adults. Its modern cabin design complements its sleek look and it looks particularly beautiful with a top-down. It's a pleasure from driving a luxury convertible and you get your money's worth with every drive. It's on our list of editors' choices as a result. The review, price and specs of the Mercedes-Benz S-Class Mercedes-Benz S-Class is the best convertible to choose when you want a little bit of everything and you have the means to make it happen. Few convertibles on the road have the presence of a Mercedes S560 convertible, making it one of our editor's choice winners. Its 463-hp twin-turbocharged V-8 is silky smooth, and the suspension underneath is equally expert in filtering out road irritations. And then there is the interior, which is a combination of rich materials that look and feel supreme in every way. Even the convertible is a soft top exhibits a level of craftsmanship that exudes quality. The S-Class is a great car, so it's not the most nimble convertible on any stretch, but if all you want to do is eat miles from top to bottom, there's no more luxurious way to do it. Audi's review, price and specs offer several open-top options, but this is a convertible version of the A5 convertible that requires the least amount of compromise. It's not as small as a sporty Audi TT or prohibitively expensive, like an exotic Audi R8 roadster. Instead, the A5 sits perfectly in the middle, offering a spacious interior, solid performance, and just the right level of luxury to make it feel special. Its soft top lowers itself in just 15 seconds, and when it's up, the A5 feels almost as buttoned up as the coupe. When dropped, there is a wind blocker available, but it is hardly necessary. The Audi A5 convertible is one of the best convertibles for each Pricing, and the specifications of the Mercedes-AMG C43 Luxury and powerful, Mercedes-AMG C43 convertible will impress luxury-prone buyers as well as performance enthusiasts. The interior is simply gorgeous, with fine details and rich materials. On-board Wi-Fi is standard, but we encourage you to stop posting updates on Instagram and enjoy the stunning performance of the C43 instead. With a 385-hp twin-turbocharged 3.0-liter V-6 and a nine-speed automatic transmission, it will have you smiling every time you break away from the stop signal. Fast, hilarious, and close to the humble features we can all admire, so the C43 finds itself on our list of editors' choices. Review, pricing and specifications This content is created and supported by a third party and is imported to this page to help users provide their email addresses. You can find more information about this and similar content in piano.io Macs format with Apple's HFS file system that Windows doesn't recognize or access without third-party software. Macs can also create a secure EFI section on these drives that can't be removed by conventional disk-splitting tools. Some drives are even sold as Mac-formatted drives - it just means they come with a Mac HFS file system instead of NTFS or FAT32. Macs can read NTFS drives and read and write on FAT32 discs. Reserve time data drive first, back time data on a Mac-formatted drive if you have something important on it. Instead, we're just wiping the drive and starting from scratch. Any files on the disk will be deleted. If you have a Mac lying around, you can plug the drive into your Mac and back time files. If you only have a Windows system, you can use HFSExplorer to copy files from a drive on a Windows disk or another drive. HFSExplorer unfortunately requires you to install Java to use it, but it's the only free option here. You may want to delete Java when you're done. Erase mac sections, including EFI system RELATED Partition: Understanding the hard drive section with disk drive control first, open the Windows drive management tool. Click Windows Key and R to open the Run dialogue, enter diskmgmt.msc in the box and press Enter to open it. This tool allows you to control partitions on drives connected to a computer - internal or external, connected via USB. Find a Mac in the drive list. Make sure you've identified a Mac drive - if you accidentally remove sections from another drive, you could damage your Windows installation or lose files. If you're lucky, you Just press the right button of each section on the Mac drive and choose Delete Tom to remove the sections. Then you can tap the right button in the empty space and choose a new simple volume to create a section and format it with Windows NTFS or FAT32 file systems. The Mac can have an EFI section. This section is marked as secure, so you can't just press the right button and remove it - the removal option will be disabled. To erase this section, we're going to have to destroy the entire disk. This process erases everything on the disk, including its files and all its sections. First, pay attention to the disk number in the drive control window. For example, in the screenshot below, the Mac-formatted Disk 2 drive. Then open the Command Prompt window as an administrator. To do this on Windows 8 or Windows 7, press Windows once, type cmd, and click Ctrl/Shift-Enter. The type of drive in the Team Fast and Click Enter window. The type of disk list on DISKPART hint and click Enter to view a list of drives connected to your computer. Identify the Mac number on the list. It should be the same as the disk number in the disk control window. Don't forget to double-check it out - you can accidentally destroy the wrong drive if you choose the wrong drive here. Enter the disk you've selected and click Enter to select the Mac disk, replacing it with a Mac number. For example, here we will take the chosen disc 2. Finally, enter the net and click Enter. This command erases the entire disk you've selected, including all of its files and sections, whether it's protected or not. You'll have an empty, unified drive after you do that. Close the Command Prompt window when you see a message that says DiskPart has been able to clear the disk. Create the NTFS or FAT32 section, you can now reopen your drive control window. If you've left it open, you may have to click action to update the data. Find a Mac in the list. It will be completely empty and display a message that says not initiated. Click the right button and select Initialize Disk. Select the MBR or GPT table format and click OK to create a section table for the drive. Tap the right button in the undistributed space on the initialized disk and select the New Simple Volume. Use the wizards to create a section with the NTFS or FAT32 file system. The drive will now be formatted for use by Windows systems. There will be no space wasted by protected Mac sections. Some Mac features require a formatted HFS drive. For example, Time Machine can only reserve time for formatted HFS drives.
