Complete list of stock ticker symbols

Abbreviation used to exclusively identify publicly traded stocks or cryptocurrency This article requires additional appointments for verification. Please help improve this article by adding quotes to reliable sources. The non-source material can be challenged and removed. Search sources: Ticker symbol – news - newspapers - books - the scholar - JSTOR (January 2013) (Learn how and when to delete this template message) Thomas Edison's Stock Telegraph Marker Machine A bookmark symbol or stock symbol is an abbreviation used to uniquely identify publicly traded shares of a particular stock in a particular stock market. A stock symbol can consist of letters, numbers, or a combination of both. Ticker symbol refers to symbols that were printed on the marker tape of a ticking tape machine. The interpretation of the stock symbols are unique identifiers assigned to each security marketed in a given market. A stock symbol can consist of letters, numbers or a combination of both, and is a way to exclusively identify that stock. The symbols were kept as short as possible to reduce the number of characters to be printed on the bookmark tape, and to make it easier to recognize them by traders and investors. The assignment of symbols and the format convention is specific to each bag. In the US, for example, stock brands are usually between 1 and 4 letters and represent the company name when possible. For example, the shares of U.S.-based computer company Apple Inc. traded on the Nasdaq stock exchange has the symbol AAPL, while shares of auto company Ford that is traded on the New York Stock Exchange has the one-letter Ticker F. In Europe, most exchanges use three-letter codes; for example, the Dutch consumer goods company Unilever listed on the Euronext exchange in Amsterdam has the symbol UNA. In Asia, numbers are often used as stock markers to avoid problems for international investors when using non-Latin scripts. For example, the shares of HSBC bank traded on the Hong Kong Stock Exchange has the ticker symbol 0005. Symbols sometimes change to reflect mergers. Prior to the 1999 merger with Mobil Oil, Exxon used a phonetic spelling of the XON company as its marker symbol. The symbol of the company after the merger was XOM. Symbols are sometimes reused. In the US, single-letter symbols are particularly sought after as symbols of vanity. For example, since March 2008 Visa Inc. has used the V symbol that had previously been used by Vivendi that had disappeared and renounced the symbol. [1] To fully qualify an action, both the scoreboard and the or ad country must be known. On many systems both must be specified to uniquely identify security. This is often done by adding the location or exchange code to the bookmark. Example Vodafone Group plc stock brand symbol Location Reuters Instrument Code Bloomberg ticker London Stock Exchange VOD. L VOD LN LN Vod. Or VOD UQ Singapore Stock Exchange VOD.SI VOD SP Other identifiers Although stock markers identify a security, they are exchange dependent, usually limited to stocks and may change. These limitations have led to the development of other codes in the financial markets to identify securities for settlement purposes. The most prevalent of these is the International Securities Identification Number (ISIN). [2] An ISIN uniquely identifies a security and its structure is defined in iso 6166. The securities for which ISIN is issued include bonds, commercial paper, shares and warrants. The ISIN code is an alphanumeric code of 12 characters that does not contain information that characterizes financial instruments, but serves for the uniform identification of a security in the trade and liquidation. The ISIN identifies security, not the exchange (if any) on which it negotiates; therefore, it is not a replacement for the bookmark symbol. For example, daimler AG is listed on twenty-two different stock exchanges worldwide, and is priced in five different currencies; has the same ISIN in each (DE0007100000), although not the same marker symbol. ISIN cannot specify a particular trade in this case, and another identifier, usually the three- or four-letter exchange code (such as the Market ID Code) must be specified in addition to the ISIN. Symbol of stock market indices While generally a tweak identifies a security that can be traded, stock market indices are also sometimes assigned a symbol, although they usually cannot be traded. Symbols for indexes are usually distinguished by adding a symbol in front of the name, such as a facet (^)[3] or a dot. For example, Reuters lists the Nasdaq Composite index under the symbol. IXIC. [4] Symbols by country Australia In Australia, the Australian Securities Exchange uses the following conventions: base symbol of 3 characters with the first and third alphanumeric character and the second alphabetic. ETFs, ETMFs can be 3 or 4 characters long. The exchange-negotiated warrants and exchange options are 6 characters long. ETOs can have numbers in the sixth character. Asx fourth, fifth and sixth letter codes extensions D[A-Z] Deferred settlement security, temporary code typically used during a consolidation division / reverse. It is used for both equities and business options. H[A-Z] Bonds/Debt F[A-Z][A-Z] Warrants exchanged G or G[A-Z] Convertible debt H or H[A-Z] Uninsured note I[A-Z][A-Z] Fractional guarantee LV no vote or limited vote O or O[A-G] Company option P[A-Z] Preference/interest warrants exchanged U[A-Z][A-Z] Exchanged warrants V[A-Z][A-Z] Exchanged warrants U[A-Z][A-Z] Warrants exchanged V[A-Z][A-Z] Canadian exchange warrants in Canada the Toronto Stock Exchange TSX and the TSXV use the following codes after the bookmark symbol: TSX behind the point extensions and other specials A-B - stock class NO, NS, NT - notes S - special US terms DB - debenture P - Capital Pool Company U, V - US funds E - PR equity dividend - PREFERRED UN - units H - NEX market R - subscription receipts W - when IR is issued - RT fractional receipts - WT rights - UK warrants In the UK, before 1996, securities codes were known as EPICs, the name of the London Exchange Price Information Computer (e.g. MKS for Brands and Spencer). After the introduction of the sequence trading platform in 1996, EPICs were renamed the Tradable Instrument Display Mnemonics (TIDM), but are still widely known as EPICs. The shares can also be identified using their SEDOL number (Stock Exchange Daily Official List) or their ISIN (International Securities Identification Number). United States In the United States, modern letter-only symbols were developed by Standard & Poor's (S&P; Q) to bring a national standard to investment. Previously, a single company could have many different tickle symbols as they varied among the dozens of individual stock markets. The term ticker refers to the noise made by tickle tape machines once widely used by bags. The S&P;amp;P system P was later standardized by the securities industry and modified as the years passed. Stock symbols for preferred shares have not been standardized. [6] Some companies use a product known as their bookmark symbol. Belgian brewer InBev, the Brewer of Budweiser Beer, uses BUD as its three-letter marker for American depository receipts, symbolizing its main product in the United States. Its rival, the Molson Coors Brewing Company, uses a similar beer-related symbol, TAP. Southwest Airlines also pays tribute to its headquarters at Love Field in Dallas through its LUV symbol. Cedar Fair Entertainment Company, which operates large amusement parks in the United States, uses FUN as a symbol. Harley-Davidson uses HOG, which is the jargon of one of his motorcycles. Yamana Gold uses AUU, because in the periodic table of elements, Au is the symbol of gold. Sotheby's (the famous auction house) uses the BID symbol. While most of the symbols come from the company name, it sometimes happens the other way around. Tricon Global, owner of KFC, Pizza Hut and Taco Bell, adopted the YUM symbol to represent its corporate mission when the company broke away from PepsiCo in 1997. In 2002, the company changed its name to match its symbol, adopting the name Yum! Brands. [8] Symbols sometimes change to reflect mergers. Prior to the 1999 merger with Mobil Oil, Exxon used a phonetic spelling of the XON as your bookmark symbol. The symbol of the company after the merger was XOM. After Hewlett-Packard merged with Compaq, the new firm assumed the symbol of the HPQ ticker. (The above symbols were HWP and CPQ.) &Amp;At&Amp;; T's (At&Amp;amp; T's) (At&Amp;s; You're) is simply T; Consequently, the company is known simply as Phone on Wall Street (the T symbol is so well known that when the company was acquired by SBC, it took the name AT&Amp;amp; T, capitalizing on its history and keeping the desired unique font symbol). Examples of US stock symbols include: A - Agilent Technologies AAPL - APPLE BRK. A - Berkshire Hathaway (Class A shares) C - Citigroup GOOG - Alphabet Inc. HOG - Harley-Davidson HPO - Hewlett-Packard INTC - Intel KO - The Coca-Cola Company LUV - Southwest Airlines (after its main center at Love Field) MMM - Minnesota Mining and Manufacturing (3M) MSFT - Microsoft T - AT&Amp;amp; TGT - Target Corporation TXN - Texas Instruments WMT - Walmart Previously, a look at a U.S. stock symbol and its added codes would allow an investor to determine where a stock trade; However, in July 2007, the SEC approved a rules change that allowed companies to move from the New York Stock Exchange to the Nasdaq to retain their three letter symbols; DirecTV was one of the first companies to make such a move. When first implemented, the rule change was not applied to companies with one or two letter symbols,[9] but subsequently any action was able to move from the NYSE to the Nasdaq without changing its symbol. CA, Inc., which trades under the symbol CA, moved from the NYSE to the Nasdaq in April 2008 and kept its two-letter symbol. [10] NYSE behind the point or Nasdaq codes fifth letter and other special codes A - Class A K - Non-voter (common) U - Units B - Class B L - Various V - Pending issue and distribution C - NextShares M - fourth class - preferred shares W - Warrant D - New issue or reverse division N - third class - preferred shares X - Investment funds E - Delinquent presentations SEC O - second class - Preferred securities Y - Receipt of American Depository (ADR) F - Foreign P - first class preferential shares Z - Various situations G - first convertible good Q - Bankruptcy Special codes H - second convertible bond R - Rights PK - A Pink Sheet, indicating over-the-counter I - third convertible bond S - Shares of beneficial interest SC - Nasdaq Small Cap J - Vote share - special T - With warrants or NM rights - Nasdaq National Market Single-letter brand symbols A - Agilent Technologies (formerly used by Amaconda Co., American Medical Buildings Inc., Atwoods PLC, and Astra AB[11]) B - Barnes Group (previously used by Bankers Utilities Corp. and Baldwin Lima Hamilton Corp.)
