MyRadar’s Hyperlocal Rain Warning using patentable technology, radar and more MyRadar Pro is a fast, easy-to-use but powerful weather app that displays animated weather radars around your current location, allowing you to quickly see what weather is coming your way. Just run the app and your location pops up with animated live radar, with a radar loop length of up to two hours. This basic functionality provides a quick way to get a quick snapshot of the weather on the go, and that’s what made MyRadar so successful over the years. Check your phone and get an instant weather assessment that will affect your day. In addition to live radar, MyRadar Pro has an ever-growing list of weather and environmental data layers that can be superimposed on top of the map; Our animated layer of winds shows an exciting visual representation of both surface winds and winds at the jet stream level; The frontal boundary layer shows high- and low-pressure systems, as well as the frontal boundaries themselves; The earthquake layer is a great way to stay on top of the latest reports on seismic activity, fully customizable depending on gravity and time; Our hurricane layer allows users to stay on top of the latest tropical storms and hurricanes around the world; The aviation layer superimposes airMETs, SIGMETs and other aviation data, including the ability to track flights and display their flight plans and paths, and the wildfire layer allows users to stay up to date with the latest firefighting activities around the United States. MyRadar Pro APK Ability In addition to layers of data, MyRadar has the ability to send weather and environmental warnings, including alerts from the National Weather Center such as Tornadoes and severe weather warnings. The new feature in this version of MyRadar includes the ability to receive alerts based on tropical storm and hurricane activity; You can set up an app to send you a warning at any time a tropical storm or hurricane form, or updated or downgraded. One of the most useful features in MyRadar Pro is the ability to provide advanced rain warnings; Our patent process for predicting hyper-local precipitation is the most accurate in the industry. Instead of checking the app all the time, MyRadar will send you a warning up to an hour in advance when the rain arrives at your current location, up to a minute, including details of the intensity and duration. These warnings can be life’s life saviour when you are on the move and don’t always have time to check the weather - our systems will actively do for you, and let you know in advance before the rain hits. All weather and environmental data presented on MyRadar is displayed in our stately custom mapping system. This mapping system uses your GPU devices, making it incredibly fast and and When you’re looking for quick weather information on the go, it makes a huge difference. The map has the standard pinch/zoom capabilities, which allows you to smoothly zoom in and pan around the United States and the rest of the world to see what the weather is like anywhere on the planet. In addition to the free app features, a few additional updates are available, including real-time hurricane tracking - great for the start of the hurricane season. The hurricane tracker provides additional data over-free versions, including cone probabilities for tropical storm/hurricane forecast tracks, and includes a detailed overview of the National Hurricane Center. Premium upgrades also include a professional radar package that allows for more information on radars from individual stations. Users can select individual radar stations across the U.S., choose the angle of the radar, and change the radar product displayed, including basic reflectivity and wind speed - great for seasoned weather lovers looking to stay on top of possible tornado formation. APK files are raw files of the Android app, similar to how .exe is designed for Windows. APK means Android Kit Package (APK for short). This is the batch file format used by the Android operating system to distribute and install mobile apps. In 4 simple steps, I’ll show you how to use the MyRadar Weather Radar Pro.apk on your phone as soon as you’ve done its download. Step 1: Download MyRadar Weather Radar Pro.apk on your device You can do it right now using any of our mirror downloads below. Its 99% guaranteed to work. If you’re uploading an apk to your computer, make sure to move it to an android device. Step 2: Allow third-party apps on your device. To install MyRadar Weather Radar Pro.apk, you need to make sure that third-party applications are being included as a source of installation. Just go to the menu for the security settings and check unknown sources to allow your phone to install apps from sources other than the Google Play Store. On Android 8.0 Oreo, instead of checking the global setting to allow installation from unknown sources, you will be asked to allow your browser or file manager to install APKs on the first attempt to do so. Step 3: Goto Your File Manager or Browser Location Now you will need to find the MyRadar Weather Radar Pro.apk file that you just downloaded. If you prefer, you can also download the file manager app here, so you can easily find files on your Android device. Once you have found the MyRadar Weather Radar Pro.apk file, click on it and it will start a normal installation process. Click Yes when asked for anything. However, be sure to read everything on the hint screen. Step 4: Enjoy MyRadar Radar Pro is now installed on your device. Enjoy! Are APK files safe? Ignore any rumors or site that says otherwise. APK files are usually as secure as the .exe Windows PC file, hence the most it should be noted that you should always download it from reliable sites. You usually don’t have anything to worry about as we have provided some of the safest sites in our Apk download mirrors below. Thanks for reading this tutorial. Download the app below!
