If you're editing multiple sheets in Microsoft Excel, it might be helpful to group them together. This allows you to make changes to the same range of cells in multiple sheets. Here's how to do it. Grouping multiple sheets in Microsoft Excel Grouping sheets together in Excel can be useful if you have an Excel work book with multiple sheets that contain different data but follow the same layout. The example below shows this in action. Our Excel workbook, called School Data, contains several sheets related to the school's operation. Three sheets have student lists for different classes, called Class A, Class B, and Class C. If we group these sheets together, any actions we perform on any of these sheets will be applied to all of them. For example, let's say we want to insert the IF formula into the G4 (G4 to G12) column on each sheet to determine whether students were born in 1998 or 1999. If we group the sheets together before inserting the formula, we can apply it to the same cell range on all three sheets. ANSWER: How to use the logical features in Excel: IF, AND, OR, XOR, NOT To group worksheets together, click and hold the Ctrl key and click on every sheet you want to group together at the bottom of the Excel window. Grouped sheets are displayed with a white background, while unselected sheets appear in gray. The example below shows the IF formula we suggested above, inserted into the Class B sheet. Grouping all the sheets in Microsoft Excel When pressed and sly Ctrl, you Choose a few more sheets and groups them together. If you have a lot more book, however, it's impractical. If you want to group all the sheets in the Excel work book, you can save time by correctly clicking on one of the sheets listed at the bottom of the Excel window. Click here to select all the sheets to group all the sheets together. By not grouping worksheets into Microsoft Excel Once you've finished making changes to multiple sheets, you can ungroup them in two ways. The quickest method is to click on the selected sheet at the bottom of the Excel window and then click Nongroup Sheets. You can also ungroup individual sheets one at a time. Simply click and hold Ctrl, and then select the sheets you want to remove from the group. The tabs of the sheet that you ungroup will return to the gray background. Background.
