什么是话题 无论是一部作品、一个人,还是一件事,都往往可以衍生出许多不同的话题。 将这些话题细分出来,分别进行讨论,会有更多收获。 Chen C and Cheng K (2008) Sharp-dependent Sharp Recovery Filter Features in Refurbished 3D Grid Models, IEEE Visualization Deals and Computer Graphics, 14:1, (200-212), Online Publishing Date: 1-Yang-2008. Lee S, Um S and Choi J Color correction system using color compensation diagrams for images from the digital camera Proceedings of the first Pacific Conference on Advances in Imaging and Video Technology, (258-269) Chou and Mohanram K Cost-effective Radiation Tempering Method for Combined Logic Proceedings 2004 IEEE/ACM International Conference on Computer Assistance Design, (100-106)Chen T, Huang K and Chung Y (2004) Modified cryptographic key assignment scheme to overcome misplacery of CHW schemes, applied mathematics and computation, 159:1, (147-155), Online publication date: 1-November-2004.Kribari-Neto F (1999) C for Econometrics, Computing Economy, 14:1-2, (135-149), Online publication date: 1-October-1999. Al-Aloui M (1996) Class rules numerical integration with first-order derivatives, ACM SIGNUM newsletter, 31:2, (25-44), Online publication date: 1-apr-1996. Demirer M and Grimsdale R Approaching techniques of high performance texture display Proceedings of the tenth Eurographics conference on the hardware schedule, (25-32) Showing 1-31 Beginning of your review of applied numerical methods in C Sepidroo rated it was amazing October 13, 2015 Ardal rated it was ok October 10, 2017 Deeny Utami rated it was amazing February 25, 2019 Brenda appreciated it was amazing November 30, 2017 Bilal tagged it as a reading october 15, 2014 quark marked it as a k-read November 14, 2014 Asdf marked it as a reading April 29, 2015 Sathyasri marked it as a k-read August 02, 2016 BookDB marked it as a read on September 17, 2016. , 2017 Mya Thet is currently reading it Apr 09, 2018 Phyu noted it as a c-read 09 August 2018 Myo Min marked it as a c-read August 28, 2018 Roy noted it as a k-read October 24, 2018 Learn about the virtual library forum Leaders going this month Stock Image On this paragraph: Prentice Hall, 1993. Solid cover. Condition: Very good. 604 pages, glossy picturesque boards. Clean inside and day. The book is designed for engineers and scientists and students who program in C. Each chapter begins with a simple step-by-step approach using complete programming examples. Content includes: Polynomial Interpolation; Solving non-linear equations; numerical integration, differentiation, linear algebra; Curve setting for measured data; Elliptical partial Equations Parabolic partial differential equations; Etc. Use. Seller Inventory No 020265 020265 Information about this seller Contact this seller 5. Stock image of this item: PTR Prentice Hall, Englewood Cliffs, New Jersey, 1993. Solid cover. Condition: Almost fine. No jacket. 1st place. 604pp.incl.index-advertising; HB beige-red w/white; the spine caught fire to grey; clean, dense pgs. .this is the first comprehensive treatment of numerical methods offering full programming code in C. Size: 8vo - over 73/4 - 93/4 high. Seller Inventory No. 041167 For more information about this seller Contact this seller 6. Stock image of this item: Thomson-Engineering (Nels 1999-09-16, 1999. Photos of stock photos, not the actual item. Seller Inventory - DS-0534370144-3 More details this seller Contact this seller 11. Stock image of this item: CRAM101, USA, 2010. Paperback. Includes all the terms, concepts, faces, locations and events that are being tested. Cram101 Just the FACTS101 studyguides gives all the outlines, highlights and quizzes for your tutorial with additional online comprehensive practical tests. Only Cram101 is textbook-specific. Accompanying: 9780073132907. This item is printed on demand. Seller Inventory - AAV9781616980122 For more information about this seller Contact this seller 12. Stock image of this item: Prentice Hall, 1992. Paperback. Condition: Used; Ok. Sent from the UK within 48 hours of order. The book is perfectly readable and suitable for use, although it shows signs of previous ownership. The spine is most likely creased and the lid is shabby or slightly torn. Textbooks usually have a number of accents and/or highlights, as well as notes. If this book is over 5 years old, please expect the pages to turn yellow or have age spots. Having withstood the book. Tanned pages and age spots, however, it does not interfere with reading. Damaged coating. The lid is slightly damaged, such as a torn or curved angle. Seller Inventory - CHL5799671 For more information about this seller Contact this seller 20. Page 2 Mark as downloaded by Stephen C. Chapra ISBN 13: 978-0-07-339796-2 File will be sent to your email address. It can take up to 1-5 minutes before you get it. Numerical methods in C Iterative Solutions for Nonlineous In this block we will discuss 5 methods for solving the nonlinear modeled equation, namely - Fixed point iteration of Bisection Method Regula Falsi Method Newton Rafson Method Secant Method First of all, and all the codes illustrated in this tutorial are tested and collected on linux linux To compile code C, run the CTRL-ALT-T terminal and enter a test.c name for the program we want to compose. To perform the Program Denial of Responsibility: Well, please refer to the standard text book for detailed coverage of the theory, in this tutorial only minimal theoretical information will be tolerated, which is important for understanding the work of the method. So, lets dive in... Nonlinear equations are a set of equations in which unknowns appear as polynomial variables higher than one. Examples include the beginning of split x2 and 25 y2y'6"x2-sinx-split These powers and vaibles may become more complex in this case, in which case hand calculations will be too troublesome, so we can use numerical methods to do computing on computers and get results. Computer code, try to solve a specific problem, must have these characters properly specified (1) Algorithm or Method Formula There are two types of Methods (-----) Iterative Methods Direct Methods (2) Stopping Condition: In the case of iterative methods we are closer to the actual solution in each iteration, so we may need to identify sufficient and necessary condition that will stop further iterations and prints the results in the desired accuracy. Built with the help of the Sphinx using a theme provided by Read the Docs. Numerical techniques in engineering and science: with programs in C and C e BS Grewal is a very good book in the numerical method of the subject of engineering mathematics.This book is very popular among engineering students of the 4th Semester.We provide this book for free download in PDF format. This book is available to everyone. If you want a copy of it, then you can buy it on Amazon.Otherwise, you can download numerical methods in engineering and science: with programs in C and C e BS Grewal PDF from the links below. S. Ge halal - Indian academic writer and scholar. He was also the author of numerical techniques in engineering and science with programs in C and C and higher engineering mathematics.How to buy numerical techniques in engineering and science: with programs in C and C BS GrewalBuy This book about Amazon How to download numerical methods in C and C The funniest thing you can do is tell a funny story. The jokes are great, too, but your audience will most likely find that what actually happened to you will be a little more humorous. Think about a few funny things that have happened to you and tell those stories when necessary. For example, your group of friends may be starting to discuss coffee shops. You can say something like: Oh no. Never again. The last time I went to the coffee shop, the barista poured hot coffee on all my pants. And yes... it got into my underpants. 2 Keep your stories brief. Telling a joke or a funny story, get to the point. People have a short attention span in general, but they are even shorter for jokes. Keep your story fast, essentially, and hilarious. 3 Make the end funny. Trying to surprise your friends or colleagues with a funny story or a joke, put a surprise at the end. This will keep them on the edge of their seats and make sure they don't laugh until you're done with your offer. You can say, You know what was in my car when I opened the door, Rebecca? Cat! It's going to be funnier than saying, Rebecca, the cat was in my car when I opened the door! 4 Use exaggeration. Telling a funny story, it's okay to exaggerate the sometimes comedic effect. Make sure, however, that you exaggerate wildly so that your audience knows that you are not telling the truth; They'll still laugh! For example, you can say, Yes, steaks at this new MASSIVE place. They're bigger than my first apartment! 5 Swap out boring words for funnier ones. Some words are just funnier than others; use it to your advantage. These words often allow more attention than words that are more monotonous. One example of this is the word Pop-Tart, which sounds funnier than just saying breakfast. Other examples include the use of cowards instead of underwear. 6 Make fun of yourself. Sometimes the funniest thing you can do is make fun of yourself. Think about it - you'll probably do some hilarious stuff on a daily basis that no one knows but you! Share these things with others and laugh with them. For example, maybe you're a neat freak, but you left the dish in the sink this morning. You can tell a colleague: I'm so stressed right now! I'm such a clean freak and I left the dish in the sink this morning. Is this the first step to becoming a treasure?! 7 Find at least one funny joke or story you can tell. Identify some funny story, event or joke that can work in any situation and with any group. Use this when the moment has come or when you want to lighten your mood. Avoid making up stories or use what you've seen on TV as your own. Chances are you'll get caught and you'll you try too hard. For example, use a funny story about your friends, family, or yourself. [7] 8 8 telling jokes in the mirror. Repetition is the mother of the teaching! While you develop a sense of humor, practice your jokes on yourself. Look in the mirror and notice how you deliver it and what parts are funny for you. Be sure to keep the climax at the end and keep your facial expression fun and optimistic. 1 Watch comedy. The funnier the things that surround yourself, the funnier you will be in real life. When you get home from work or school every day, watch a few episodes of funny movie or TV shows. Choose something that is sure you laugh. For example, you can watch reruns of The Office or Bridesmaids. 2 Go to local comedy clubs. Check out the comedy clubs in your area and explore the comedians. What jokes or stories worked with the audience and which did not? Note that things made you laugh the most and tell similar stories and jokes in your personal life. You can also watch comedy shows online if you can't find a local club. 3 Use YouTube to learn from others and get feedback. Watch other comedians on YouTube to learn new ways to be funny and enjoy humor. It's also a good idea to start your own YouTube channel to get feedback on your own funny stories and jokes. 4 Reflect on what you are grateful for. Focus on the positive aspects in your life and more on the negative. This will help improve your overall mood and make it easier for you to laugh all day long. Every day, think of one thing that you are grateful for and meditate on it. You can also store on your phone. 5 Spend more time with funny people. Do you have a colleague who you think is hilarious? Or maybe the aunt who keeps everyone laughing? Hang out with them sometimes! Ask your colleague for a drink or go to your aunt's house to chat. Do something fun every day. You don't need to skydive to have more fun though you can if you want, but plan at least one fun thing a day. You can go see a new movie that has just come out or play with your kids for an hour. Whatever you choose, sit back, relax and enjoy it. A lot of experience and interaction with other people will give you extra material for your own comedy. 7 Spend the evening of the game. Plan a fun night game for you and your friends. Bring board games, card games, or just play charades. This will give you the opportunity to relax and spend time with those you love. Hang a magazine to record funny events and things that make you happy. Not only will it help you remember funny stories to tell later, it will also train you to look for comedic moments in your own life. Over time, this will help better sense of humor. Every time you notice and record something with a sense of humor, you'll get more practice! Collect funny stories about your own life or moments in other people's lives that you find amusing. Write down Write down things you find, such as quotes, messages on signs, or silly coincidences. 9 Reduce stress in your life. You can't really enjoy life if your stress levels are high, so cut some of them! Maybe you took a second job to pay for the boat you just bought and you don't have time for yourself. Sell! No material thing is worth losing your world. Maybe you're stressed at work or at school. Make a to-do list and prioritize everything. Do the most important tasks first. Take breaks to give yourself some relief. You can also talk to your boss or teachers if your workload is too much. 1 Make different voices or impressions. Impressions can be a great way to get laughter from others. You can mock celebrities, politicians or even your friends and family if they are not sensitive. Avoid impersonating people of different nationalities from you. For example, never mock someone who has a thick Asian or Mexican accent while speaking English. 2 Use the mics to be more attractive. When you tell a funny story, don't forget to be expressive. Smile and laugh with everyone. If you're telling the shocking part of the story, expand your eyes and lean forward for dramatic effect. You can also use your hands to be more expressive, too. 3 Tell stories with your body language as well. The way you move and gesture, communicates a lot with the people you talk to. The way you tell a story goes a long way to making it funny, so practice making gestures as you say. See how you tell a story in front of a mirror. Film yourself telling the story to see what your body language looks like. Continue practicing on camera to improve the tin. 4 Laugh at the jokes of other nations. Being funny is also about recognizing humor in others. When your friends, family, or colleagues are funny, share in a joke, laughing with them. People will see you as having the best sense of humor if you are able to laugh and make others laugh. 5 Fun! The most important thing is to have fun! Don't get caught up in making people laugh that you forget to enjoy. Remember that you are more than your humor. So go out there and enjoy life! Add a new question, why do you think having a good sense of humor helps people to be always positive and happy? A good sense of humor can help you make other people laugh and be happy, while those who have a good sense of humor seem to be positive and happy. However, he said people with a sense of humor spend so much time making other people happy that they are not happy themselves. The question is how to improve Humor? Spend time with friends and family, or go out in your community. Observing and participating in social events will help you develop a sense of humor. The question is, how can I go back to someone to make fun of me? You don't know. Tell them they hurt your feelings, make them regret, and just forgive them. Ask a question This article was co-authored by Natalia S. David, PsyD. Dr. David is an assistant professor of psychology at the University of Texas Southwestern Medical Center and a consultant in psychiatry at Clements University Hospital and Lipshi University Hospital. She is a member of the Sleep Behavioral Medicine Council, the Academy of Integrative Pain Management and the American Psychological Association's Division of Health Psychology. In 2017, she received the Baylor Scott Award and Scholarship and the White Runway Research Institute. In 2017, she received a psyD from Alliant International University with a focus on health psychology. This article has been viewed 403,382 times.
