As soon as I tried it with my iPhone 7 Plus, I started hearing a clicking sound that then sounded like my heartbeat as soon as I played music. I visited several forums and found that one of the fix is to press the volume button for 1-2 seconds. It works. However, the control buttons don't work. I need to use my iPhone volume and call button to control. I checked and found that the KK20i is primarily designed for Android devices and that qC20i is compatible with iOS headphones. I have the following questions: 1. Is there a click/heartbeat sound question in KK20i?2. Do the KK20i control buttons work when using the iPhone 7Plus?3. Are there any problems reported when using KK20i with Android phones? I'm thinking about going back to KK20 and trying to get the KK20i, depending on the answers to the above questions. These headphones are ideal for long-haul flights. In addition to overall impressive noise cancellation (-33dB at all frequencies on some tests), these headphones excel when you need to undo low frequencies like jet engine sounds (-45dB). The absence of a connective cable further minimizes weight. There is no strip or cable connecting the headphones. You don't have to deal with the noise caused by cable rubbing against your clothes or body. These headphones produce some low-end, but the bass doesn't come with great power and oomph. The highs and middles are good though. They are not too forward and represent a good level of clarity. Most genres of music will sound good with them, although bass-heavy tracks like dance, hip hop, EDM and the like may seem lacking. With the proprietary connection chip used, the AirPods sync with Apple devices without a hitch. This is a notable advantage over many third-party wireless headphones, where you may need to go through many steps just to get them synchronized properly. The signal is turned off only in very few cases. Normally, you should have a stable wireless listening experience. Also, there is no noticeable lag between what happens on the screen and when you hear the sound these headphones when watching the video. The voices sound clear and complete, so conversations won't be a problem. Problem. Problem.
