The Maven project was launched in early 2017 as part of the Defense Department's efforts to integrate AI and machine learning into its defense strategies. Drones, robots and AI are increasingly used in reconnaissance and combat operations during what was considered an arms race of the 21st century. While Google described its role as an offensive, the memo argued that participating in the Maven project could damage its reputation and ability to attract talent at a time when public confidence in technology is waning. The case puts students in the shoes of a recent hiring faced with the choice of signing a memo. He also invites them to consider how they would respond, as CEO, to such a petition against one of the company's contracts. Hot on the heels of Android 11 Developer Preview, Android Studio 3.6 is now available on a

stable channel, which means that developers can start making confident use of it for their projects. This brings a number of useful features and including the new Split View's design editor for faster design and preview of XML layouts. Another exciting new feature is the support of several displays in the Android emulator. Automatic memory leak detection meanwhile to make debugging that much easier. You can check out the full array of features from the Android Developers blog, or get the highlights below. Split View and EditingPerhaps The most interesting new feature in Android Studio 3.6 is Split View for Design Editors. This allows you to see the XML code side by side along with the preview render. It's a small thing, but in fact it makes life a lot easier to view the effect that changes the code right away (and vice versa). The view you choose will also be saved on a case-by-case basis, which means you can easily download the preferred setup depending on the file you're editing. While we discuss design, we should also note the new color collector, making it much easier to select and fill color values without a set of values. It's available through the XML editor and design tools. Faster development When it comes to development, a few new changes should make life easier for Android Developers in Android Studio 3.6.View Binding is a particularly welcome inclusion that will offer a compilation of security time when linking to opinions. With this option, you'll create a binding class for each XML layout file in the module. This will actually replace the need for findViewById: you can easily refer to any type of ID without risking zero pointer exceptions or class exceptions. This can prove very useful and reduce a lot of patterns. Other new updates include the release of the IntelliJ 2019.2 platform with better launch time and new tool services, as well as support for Kotlin for more Android NDK features. Updates to the Android Gradle plug-in include support for the Maven Publish Gradle plug-in. This allows you to create artifacts in the Apache Maven repository. Testing and debugging Android Emulator 29.2.12 makes it easier for developers to interact with the location of the emulation device. Google Maps is now built into the advanced control menu, making it easy to specify locations and create routes. Perhaps more appropriate is still the support of several virtual displays that will be useful for those designing for devices such as Samsung Galaxy Fold.Read also: Development for folding devices: What you need to know, memory detection Profiler will detect activity and instances of a snippet that may have leaked. Build time has also improved for debugging builds thanks to the use of zipflinger. A better quality of life changesIt's only a small selection of updates available in Android Studio 3.6. You'll find plenty of other small updates as you use the new software too: including the resumed SDK downloads, which is perfect for those who don't always have an hour spare to download the latest image Android! Grab Android Studio 3.6 here. Of course, on the Canary Channel you can already get your hands on Android Studio 4.1. What do you think of these new new What would you like to see come to Android Studio in the future? Chic, stylish gifts for the style of maven 1 of 12 Salvatore Ferragamo. \$590. ferragamo.com 2 out of 12 Alexander Wang. \$150. alexanderwang.com 3 of 12 Rei Kawakubo of Comme des Garçons splashes some spots through the signature chair of Alvar Aalto, \$450. artekstore.com 4 of Chanel's 12 premiere watches. \$24,500. 800-550-0005 5 of 12 loafers from Dior. \$780. 800-929-3467 6 of Eddie Borgo's 12.\$450. neimanmarcus.com 7 of Isabelle Marant's 12 gloves. \$240. 212-219-2284 8 of 12 Kelly Wearstler. \$350. kellywearstler.com 9 of 12 Maison Martin Margiela. \$280. sweetbellausa.com 10 of La Maison du Chocolat's 12. \$260. lamaisonduchocolat.com 11 of 12 Narciso Rodriguez. \$1,395. barneys.com 12 of 12 Ralph Lauren Home. \$595. ralphlaurenhome.com I recently attended a meeting where the number one rule of personal branding was broken: Never say anything negative about a person or company. At the meeting, the woman we'd call Sue asked where she was from. A simple question that requires a simple answer. Instead, Sue, it was what I sometimes think of as a throwback to a high school moment, these irrefutable moments when what should be hidden is exposed. Sue, answering the question, threw in gratuitous information the name of the former employer and added a dash of negativity about the company. Not only is it completely unnecessary, but this type of behavior can put you in a bad light. It is important to remember that in the end people want to know that they can trust you to say positive things about them and their company. All of this particularly hit the house when I read Ken Auletta's excellent profile of PR maven extraordinaire Howard Rubenstein in the current issue of The New Yorker Auletta writes: To get Rubenstein to say a bad word about a public figure, you'll have to torture him. Now, I'm not suggesting that we all need to walk around spouting Polyannish statements. Instead, it all comes down to discretion and knowing when to express your opinion and when to keep your mouth shut. Yes, you can be passionate and have strong opinions on issues, people and institutions. It's just not in your best interest to say anything that might be interpreted negatively about other people or companies, especially when it relates to people in your working life. Obviously, if corporate culture encourages railings against a competitor it is normal to follow suit. The key, however, is the exercise of discretion. Which brings us back to Rubenstein, who has a rare ability to easily slide from representing disparate forces such as Democrats to Republicans and still remains friends with everyone. His secret? Auletta concludes that Rubenstein is much more than a slippery politician, since he is so believable and reliable. Eliot Spitzer is quoted speaking in Piece: His Rubenstein business needs to be close and reliable enough that when he wants to be an intermediary and wants to say something that is not for public consumption, you will know that he is reliable. This is because his vested interests are in protecting this trust, which is his greatest asset that I can trust him with. Remember that trust is your biggest asset as well. No one wants to associate or do business with someone they don't trust. So the next time you want to say something negative about someone, it's in your own interest to kindly shut your mouth. Wendy Marks - President of Public Relations/Marketing Communications, Marks Communications, wendy@marxcommunications.com Inc. marxcommunications.com Android Studio is a prime tool produced by Google to create android apps. Like many larger modern applications, it is installed through a small installation utility that prompts a full load during the installation process. The browser automatically detects your operating system. Tap the download buttons to manually download another OS-specific version if your automatic version is not accurate. Google To launch Android Studio on Linux, Google recommends the following system specifications: GNOME or KDE desktop64-bit distribution, capable of running 32-bit applicationsGNU C Library (glibc) 2.19 or later4GB of RAM minimum, 8GB of RAM is recommended 2GB of affordable storage space minimum, 4GB Recommended (500MB for IDE and 1.5GB for Android SDK and Image System Emulator)1280 x 800 Minimum Screen Resolution Running Android Studio requires multiple hand-satisfied dependencies. On the 64-bit version of Ubuntu install 32-bit libraries with command: sudo apt install libc6:i386 libcurses5:i386 libstdc-6:i386 lib32z1 libbz2-1.0:i386 On the 64-bit version of Fedora, install 32-bit libraries with a command: sudo yum install zlib.i686 ncurses-libs.i686 bzip2-libs.i686 With these libraries installed, unpack the zip file for the installation of Android Studio. For a user-specific setup, unpack it elsewhere, like /usr/local, or for general users, consider/opt. Start the installation master by performing /android-studio/bin/studio.sh from where you unpacked the SIP. Complete the installation with the graphics installer's tips.
