The challenge is to provide the best solution that meets the requirements of an individual clinical situation and the aesthetics of expectations. The IPS-tested Empress Leucit glass-ceramics gave a key impetus to the aesthetics of dentistry in the nineties and never lost its value. Currently, the innovative all-ceramic system IPS e.max includes several new types of materials: lithium disilicate, fluorapatite and zirconium oxide glass ceramics. Lithium-dysilicate ceramics are suitable for both press technology and CAD/CAM. They are available in multiple degrees of translucency, providing the maximum level of aesthetics - but not only that. Given their high strength (500 MPa), IPS e.max lithium-dysilicate ceramics can be used for a wide range of indications. means two-axis flexibility for 10 years (IPS e.max CAD 530 MPa, IPS e.max Press 470 MPa).
