Woodworking is a skill that you can take as much as you want. The more you learn, the more complex projects you can solve. But regardless of your skill level, your project can always benefit from the plans someone has made. Here's how to find plans for almost any project on the internet. Gather tools before you start even the simplest projects, you'll need a few basic tools. A variety of screwdrivers, measure tape, hand saw, miter box, and sandpaper can take you far. Wireless drill/driver and puzzles can take you even further and help you finish your designs in less time. When your budget, space and ability are ready for self-store tools, consider table saws, miter saw, router, and drill press. These great power tools will help you process large lumber and make accurate and repetitive cuts. Woodworking also requires proper safety equipment, which includes eye and hearing protection and gloves. Proper store ventilation and a vacuum system, combined with a respiratory mask, are also recommended when using tools that discard small particles. What to look for in the Plans/Woodworking set and DIY project plans can vary in quality and detail, so before you start searching, get to know the kind of things you'll be looking for. Here are a few requirements that should include all plans. List cut: This list provides the amount of lumber needed for the project and what sizes it needs to be reduced by. The best lists are cut and projects will leave the least amount of lumber scrap, which means you make the most of the entire board or sheet of plywood. Tools: Every tool and accessory needed to create a project. It's even better if it lists alternative tools if the tool isn't available. Materials: All materials must be listed and include items such as screws, glue and other equipment. Charts: 3D diagrams of the finished project and blown views are useful for study. They are often available in the form of PDF or as a file for Sketchup, a free 3D modeling program used by woodworking of all stripes. Photos or videos: Visual elements, in the form of photos or videos, are incredibly useful to follow you through the project step by step. Time and Complexity: Knowing how long it will take for a project to complete, as well as the level of complexity, you can assess if the project is suitable for your needs and skills. Start searching: How to find good online Google plans is probably the first place where most people will start looking for woodworking plans, but often the best results can be a combination of articles and how-to parts that just aren't detailed enough. they'll link to plans (as we're trying here at Lifehacker), but other times, they're just showing off a cool project. There are better, more accurate ways to find what you're looking for. Use Google's Advanced Features If You're Going to Use Google, Better Better is to search Google for PDF files that are most likely from print resources and will often be very detailed plans. You can use Google File Operator to do this. For example, if you want to build a greenhouse, you can look for filetype:pdf, how to build a slaughterhouse. You can also use Google Image Search to research the project. Unlike PDF software search, image search provides a photo of what the project will look like, which is useful in determining whether you want to continue building it. By doing a search of images on how to build a step chair, you will have a ton of options that all lead to woodworking plans of varying quality. (As part of them is important, otherwise you just get pictures of step chairs.) Search around on The Woodworkers Forums are a social bunch, and there are several popular forums where people share their thoughts on tools, discuss techniques at length, and of course upload their plans. Some of the most active online woodworking communities include Lumberjocks, Woodworking Talk, Wood Magazine, WoodNet, KRG, and Sawmill Creek. Search for those to see if they have what you are looking for (either with their built-in search tool or from a Google-specific search site, such as the site:lumberjocks.com side table). Although it's not a forum, Instructables also has a ton of woodworking projects. Most are skewed toward beginner stuff, but it often feels like a forum, both because of active and helpful commentators. Contact Woodworkers' Associations The Woodworkers Guild of America provides several plans on its website, but it's best to participate in the meetup and source ideas from members. The modern woodworkers association makes weekly podcasts and has active forums, but not many projects. This is a great place to connect and find woodworkers to follow on YouTube or their blog. Subscribe to Woodworking Magazines As your interest in woodworking grows, you'll want to subscribe to Woodworking Magazine. This will help feed your new obsession with articles about woodworking tools, techniques, and plans. As a print magazine subscriber, you'll also have access to their plan database on their websites. Popular magazines include, Woodworkers Journal, Fine Woodworking, and popular Woodworking. Scour blogs and YouTube A lot of woodworkers share their projects through their own blogs or YouTube channels. In fact, we've shared many of them here before, including, Tree for Mere Mortals, Wood Whisperer, Matthias Vandel, April Wilkerson, Sawdust Girl, Tree House, FixThisBuildThat, pneumatic addict, Build-Basic, Rogue Engineer, Her Tool Belt, and Ana White. YouTube's best woodworkers create great videos, but also provide full with a list of cutouts, tools, materials and instructions. Find favorites and save them when you do your quest. Woodworkers Workshop and FreeWoodworkingPlan.com were Forever. They provide free woodworking projects covering almost everything you can imagine, but the quality of the photos and instructions is not as good as what you find elsewhere. They can still serve as great resource jumps for experienced woodworking. Manufacturers who produce woodworking tools and materials have got into the game of creating content, too, and some will share woodworking plans online. Minwax and Ryobi, for example, provide their plans for free, and Rockler offers its woodworking plans for a fee. Look for them along with other blogs and you'll have a handy list of resources that you can turn to any project. Photos of Jordanhill School's DDT department, Damien Pollet, 123 x 456. Workshop is a new blog from Lifehacker all about DIY tips, techniques and projects. Follow us on Twitter here. Damien Pollet - Flickr CC After acquiring some tools and building several major wood projects, you'll want to test your skills by creating bigger and more complex projects. There are a ton of great resources available online, but this can be overwhelming when you start searching. Here are some tips for finding the next woodworking plans for the project. Join woodworkers associations everywhere, and they are usually willing to share ideas and plans with like-minded people. Check the local branch of the Woodworkers Guild of America. They have several plans on their website, but it is better to meet with members in person. Another large organization is the Association of Modern Woodworkers. They produce podcasts and their members actively participate in their forums. Search Forums DIY and woodworking websites usually have woodworking plans available to their readers. Lumberjocks, Woodworking Talk, Wood Magazine, WoodNet, Kreg, and Sawmill Creek all have active forums. Use the search functionality for each forum to narrow down exactly what you're looking for. Google Search for PDF files and images Use the Google operator's filetype to search for PDF files. For example, if you want to create a side table, you can search for a filetype:pdf, how to build a side table. Do a Google Image Search to pull up a gallery of images and photos like the project you're planning to build. Each image usually results in a project page of different ability. Sign up for Woodworking Magazines Other woodworking magazines will help feed your newfound obsession with articles about woodworking tools, techniques, and plans. As a magazine subscriber, you'll have access to their plan database on their websites. Popular magazines include the Woodworkers Journal, Fine Woodworking, and Popular Woodworking. Search blogs and Many woodworkers share their projects through their own blogs or YouTube channels. We've shared many of them here before, including mWoodworking for mere mortals, Wood Whisperer, Matthias Vandel, April Wilkerson, Wilkerson, Girl, Tree House, FixThisBuildThat, pneumatic addict, I love doing things, Jay Bates, Rogue Engineer, Her Tool Belt, and Ana White. YouTube's best woodworkers not only create great videos, but also provide a complete blog with a list of cutouts, tools, materials and instructions. Subscribe to your favorite DIYers, many of which are after weekly projects. Other websites include woodworkers Workshop and FreeWoodworkingPlan.com. Both have been around a long time and provide free woodworking projects. The quality of their photos and tutorials is lacking, but they can be a great source of ideas and inspiration. Manufacturers and companies that produce woodworking tools and materials now share woodworking plans online. Minwax and Ryobi, provide their plans for free, and Rockler offers his detailed woodworking plans for a small fee. Add them to the list of favorite bloggers and YouTubers, and you'll never worry about finding project ideas again. This content is created and supported by a third party and is imported to this page to help users provide their email addresses. You may be able to find more information about this and similar content on piano.io Amy Kay/Getty Images Almost every woodworking project in one form or another will require you to check out some intersection, joint, or board end for square, or square. In some cases, you need to confirm that the entire build is square. For small projects, you can use a square tool such as a try square, a speed square, or a frame square. For larger projects, you can check the square by measuring diagonally between opposite angles: the assembly is square when the measurements are equal. You can also use the 3-4-5 method based on the Pythagoras theorem: a² and b². c². one plank woodworking projects pdf
