Use this sewing machine foot guide to make your sewing faster, more accurate and easier. There are a huge number of foot presses on the market, and while they all perform different tasks, you only need 10 of them in a sewing kit that you will use on a regular basis. SEWING MACHINE FEET GUIDE

I'm sure you have quite a few sewing machine feet that came with your machine. Why not try them and see how much it improves your sewing. A little more time fading to get your right leg and needle in your car can make your project turn into a professional kind of item you'll be proud of. Snap-On vs. Screw-on Depending on the brand of your machine, sewing machine feet can be snap or screw-on. Most modern machines use a binding method, making it quick and easy to change legs. Older machines tend to have screw-on feet that attach to a machine with a large screw. Although they take a couple of seconds longer to put on, they are still very easy and you should feel confident switching your legs. Sewing Machine Foot GuideWhat is the best sewing machine legs? The best sewing machine feet to start sewing with are -The first 4 sewing machine feet on the list most likely came with your machine and the last 6 can be purchased either individually or bundled. Of all these legs, my most commonly used is the Teflon leg so take note of that section.1. Universal Foot (Universal Foot) All machines are equipped with universal sewing knives, which are used for straight sewing and simple zigzag on a wide variety of fabrics. They can also be called a general purpose leg, a straight leg stitch, standard legs or multipurpose legs. If you have an old-fashioned machine with just this one foot you will be able to sew 90% sewing projects successfully. Having trendy gadgets don't need to sew beautiful clothes and designs and this will be your most important foot sewing machine. Further reading: How to sieve seam2. Rolled Hemming FootA hemming feet (sometimes referred to as the hem sewing machine legs) is used to sew a narrow rolled hemline on thin fabrics and clean fabrics. It turns the hem and sews it in place all at the same time, so that saves you a lot of time in clicking. See how it has a curved cutting edge to rotate the hem. The rolled-up hem is best used for straight hemlines rather than curved hemlines. Overall sizes include 1/8 inch (3 mm) and 1/4 inch (6 mm). Further reading: How to use the rolling hem of the footAll Target and rolled the Hem Sewing Machine Feet3. The Zipper FootThese sewing machine feet allow you to sew close to the edge of lightning teeth, piping and bulky edges. Most leg zippers allow you to position the needle either to the left or right of the foot. The photo below shows several different structures of the zipper leg. One All they have in common is that the needle slot left or right, not in the center as usual. You can get specialty feet feet Sew invisible zippers, but even they can be sewn successfully with regular leg zippers. When you start sewing just get the basics and built your kit as you grow in experience and confidence. Further reading: Tzipper Sewing Machine Feet4. Overedge FootMost modern machines are able to create a closed edge for knitwear and woven products. These sewing machines feet will help tie the edges neatly. The edge created by the castle leg is a little different for this from the sergeant. The sergeant will cut the damp edge before sewing while the foot acceleration does not cut. This means that it is important to trim the raw edge just before sewing to prevent wear. Next in a series reading:Seam ends without serger How to use serger5. Blind-Hem FootThe blind leg hem or hem of the leg has a metal sewing machine leg guide to create accurate stitching for your invisible blind hem. Further reading: How to sew a blind hemOveredge and a blind hem sewing machine Feet6. Teflon leg (non-stick leg) This useful leg slides on leather and vinyl fabrics without sticking. I use a Teflon foot sewing machine a lot for sewing Lycra and other complex fabrics and even keep it on for regular sewing instead of all purpose feet. Since they are made of plastic substances, they wear out a bit and I replace mine every year or so. You can see the one in the photo below well loved. Further reading: How to sew a skin As to sew Spandex 7. Collect your feet This comfortable foot collects light tissue as you sew. It can even collect and connect tissues at the same time. If you collect regularly it will save you so much time. The main thing to remember is that these sewing legs are for light or thin fabrics and this only creates gentle collects. If you want to collect feet for thicker fabrics or deeper collects then look for a ruffler in the number 10 spot. Further reading: Collect your feet tutorial - how to assemble a quick Teflon and collect a clothes machine Feet8. Buttonhole FootThe kind of foot loops really vary greatly from brand to brand, but its purpose is to create a smooth and perfect looking loop. Loops can also be created by zigzag legs, as clear plastic feet are depicted below. The long white leg of the loop automatically sews to the correct length of the loop, as the button is placed in the back with a spring mechanism. These sewing legs are from my Janome machine. Next in life: How to sew loops As to sew a button with the help of a machine. The sewing machine feet for Buttonholes9. 1/4 inch seam leg This leg will give you a perfect 1/4 inch (6 mm) seams. You can purchase them with or without additional guidance on the side. The foot with the guide is great for topstitching flaps on bags and clutches. Further reading: How topstitch bagsSewing machine legs - 1/4 inch Feet10. Ruffler feet Last item in my sewing machine leg guide ruffles Fantasy is dodgy amazing for pleating and collecting all kinds of fabrics. As you collect the feet, it can ruffle and sew onto a flat piece of cloth all at the same time. Further reading: How to use a ruffler footSewing Machine Feet - RufflerMore Sewing Machine Foot Walking Foot - Walking Foot Is Useful for Sewing Blankets, Leather and Lycra Fabric as its up and down movement means it doesn't stick to any fabric and releases any shrivelled fabric. Binder Foot - This specialized leg attaches the displacement tape to the untreated edges of the fabric. Best for straight edges. Edge stitch leg - The edge of the stitch leg come with a guide that allows you to sew into the crease of the seams exactly. It's great for quilted. Walking FootBinding FootEdgestitchWhere Buy a clothes machine FeetSave money and buy a sewing machine legs in a few packages. These packages will fit the lowest shank machine and can greatly increase sewing pleasure, quality and performance. I found that the common kits found on Amazon and eBay are actually pretty good. Just don't lose your markings and packaging as it can get a little confusing when you have 30 to 50 free feet and you have to identify them all. More ArticlesHave Sewing Tools have you tried most of them in my sewing machine leg guide? Which one is your favorite? Please share your thoughts. Here we have a collection of tutorials related to our Machine Presser Legs kits. First of all - these are the names of the feet you get. You can download this image here. Video Tutorial Guide: Braided Foot: Feet: Hole Lace Feet: Hole Lace Feet: Joining Feet: Quilted Feet: Foot Embroidery: Beaded Feet: FootWork: Pintuck Legs: (or acceleration of leg edging): guide leg: pintuck legs: leg stitch: Blind Leg Hem - Edgestitch Leg designed specifically for easy stitching of blind hem. A blind hem is a stitch along the hem that is not visible on the right side of the fabric. Watch this tutorial on how to blind the hem stitch with a sewing machine. Can be adjustable foot as well as good for top sewing and can be used for pintucking (although there is a specialty foot specifically for this as well). Rolled Hem Foot - Hemmer Foot - Hemming Foot Best for hemming light tissues such as chiffon and silk because the leg is automatic hem while stitching. See this tutorial for using hemming feet. Edge joining the foot - - - Leg For joining two pieces of fabric, narrow edge of top sewing, and for stitching into a piece of seam ditches on blankets and seams. Cloudy leg - Cloudy leg - Leg acceleration - Overedge FootUse with a dispersal stitch as a replacement for the sergeant. Serger is a specialized sewing machine for finishing the edge of a sewing project to prevent fabric untangling. This leg has a guide that builds up with the center needle position and cannot be used with straight stitches. Read more: Presser Legs review: Cloudy Leg Felling Foot - Lap Seam Foot To create flat log of seams, or closed side seams commonly found on jeans, men's shirts and reversible clothing. This foot saves time by doing folding and pressing as you stitch the seam. See this tutorial to create a flat seam cut down from the leg log. Collect feet - Shirring FootFor production smock-like collect. See this tutorial using foot collection. Ruffling Legs - Ruffler FootFor making ruffled or pleated fabrics of various sizes. More for comparison between picking your feet against a ruffler. Pintuck FootFine grooves allow for precise distance of hollow or wired pintucks. Pintucks are small folds that provide texture and delicate details for fabrics. Read more and get tips to work with this specialty foot here and here. Roller Foot or Teflon FootSpecialty feet to work with a cloth that sticks to normal feet such as leather, plastic, vinyl and suede. Rolling feet have a textured roller in front of the needle, while the Teflon leg is similar to all the purpose feet with a nonstick surface. Learn more about roller-foot sewing. The FootA zipper should have for sewing with zippers. Adjustable for sewing on the left or right side for zipper insertion. It can also be used for attaching pipes or decorative edging. Invisible Leg Cipper - Hidden Leg of the Cipper - Hidden Lightning FootFor installation of invisible lightning. The zipper coils actually act as a guide, allowing perfectly arranged stitches that won't show up on the front of the garment. See this tutorial to install invisible lightning. The FootFor button make the hole button. It can be automatic or manual. Cording Foot-Welting Foot- Pipping FootUsed to make trim for pillows, pillows, bags, etc. or multiple cords. Comes in different sizes because the foot has a groove/divot to hold the cord in place. Can also come with a different amount of cord grooves for decorative cords. Bias Binding Foot - Bias Binder FootFor use with packaged or pre-made binding or some binding legs eliminates the need for a biased creator by taking untreated strips of offset and folding, feeding, flattening and ending with binding. See one type feet here and cone shapes here. A quarter of an inch of leg - The quilting footFor accurate 1/4 seam surcharge, can also include itself hand or marked manuals. More specific quilted legs will include a 1/4 seam guide, but is also designed for ease in turns and can usually only be used for direct stitching due to a very small needle opening. Open Foot Feet - Open toe Applique FootOpen width before the needle to improve visibility and as a result is often used for appliques and other complex works. Free Movement quilting feet - Darning Foot - Embroidery FootFor is a free style of decorative quilted, darn, and embroidery work. The spring is loaded to keep the fabric in place with an open or closed circle of metal or plastic. The food is disconnected when using this leg and the fabric is guided by sewerage. Walking Feet - Even feed FootFor even poop on top as well as bottom to help feed multiple layers evenly without displacement. Useful for straight line quilted and matching plaids and other patterned fabrics.
