Prove to everyone that you can survive these conditions. Version 12.0.8 updated! I believe that each player wants to play their game works with a high degree of freedom, the story is long, the elements of the game and more, so minecraft, adventure, construction, growth, the first person was born in a collection of RPG games collected in one. It's not just a game, it's a game maker, the same type of theme games are made with many Minecraft, including Block Story to promote today. Previously, Minecraft developed a lot of games that use scripts, so why is this the only one to promote Block Story? Since the game is carefully packed in either the map or game interface and even redesigned at the game menu, this game is a makeover. Because the game's picture style is displayed as square pixels, many players cannot accept Minecraft. Compared to today's full range of next-generation games, Minecraft is truly unique in the picture. However, it is simple because the user can easily handle the scene, so minecraft is the only one in the field, the real area of the world three times. To give the player a better visual experience, Block Story maintains the map-based block model, remaked, making the player the same number of rendering games under the premise of making the picture effect more refined. Players who have played Minecraft know that the whole game scene menu is very simple. Block Storyde, the game stage bar was redesigned, the menu joined the mission equipment system, like a similar Diablo design, and joined the original need to be synthesized by the player to get the compass tool. In addition to the more appropriate RPG style of the game, cancel the physical power settings of compulsory physical eating, but joined the element worth the mana and joined the European fantasy style magic series similar to floating technique, activate floating mode, characters can continue to jump floating, stop action will gradually fall, this setting moment so that the hero gained coveted skills, and the use of restrictions, making the game greatly reduced in difficulty and easier to use. When collecting resources, the style of the original work is preserved, and the collection progress of the resources is broken lines on bars and articles. Collected resources can be combined through the stage column or synthesis station, the game's internal synthesis guide, players need to follow this guide to collect the necessary materials for the synthesis scene. Of course, the stronger, more robust the stage, the harder it is to collect the necessary materials. For example, high-grade ore will be buried underground. Low player awaits, like traditional RPG games monster-**apkaWarD.com** will be unknown, the color of the monster's name in the game represents the attacking desires, the green name will not attack even against the monster attack, the yellow name will counter attack when the monster is attacked, and the red name player will take the initiative to play the attack. Of course, to explore in the game, for the difference between the power of more monstrosity monsters or at a great distance. When playing the game, the player may feel walking to the edge of the map, but when they get there I see something new. If you view too many system resources at the same time, the map of the game will be larger, consumed and even stuck. Therefore, such a game uses a uniform time loading mode, so the player left a distance base, the scene behind it disappears completely, resulting in the player is very easy to get lost. Based on the elements of minecraft's main game, Block Story is easier for game players to accept, again rendering the interface and scenery, making the game more compatible with rpg game style, redesigned interface and game hints, reducing the difficulty of the game's top hand compared to the original Minecraft.
