With Box, you can safely store files in the cloud. You can also access information wherever you are at any time. This intuitive app syncs information from your desktop and phone. It is a handy tool when you are in meetings or away from your desk. With Box, you can share the necessary files with your colleagues or update documents from your mobile device. There's also the ability to view different types of files and enjoy full-screen quality. When you install Box, you get 10GB of cloud storage for free. You can add extra security to more sensitive files with file-level security controls. You can access your information and folders offline for added convenience. You can view documents and stored files using a real-time search tool. There is also an easy way to share large files with friends and colleagues. This is done through the link-sharing method. All you have to do is copy the automatically generated link and you're good to go. It's a versatile cloud storage program because you can save photos and videos too. The download speed is slow at times, but in most cases it depends on your network connection. Box is a secure, fast, and user-friendly system to manage important files wherever you are. If you have a phone, you have access to all your important information and folders at the touch of a button. Where can you run this program? This app requires Android version 5.0 and up. Is there a better alternative? No. Box is a reliable cloud storage system for Android phone users. Dropbox works in a similar way, but with less space. Switching to cloud storage makes it easier to access files. Box is a safe and secure place to store your information. It's an effective tool and a top-notch folder management option while you're out of the office at any time. Should you download it? Yes. If you find yourself away from your desk and need critical information on the go, this is an effective system to use. This music search engine for Android devices allows you to view thousands of third-party MP3 websites through a single interface. You can even listen to and download tunes. MP3 Juice is a free app that lets you search and play MP3 music files as well as download them for offline listening. MP3 Juice is an app that aims to simplify the search for music. However, the execution is not as smooth as you might hope, despite the fact that the app is safe and does not contain malware. The user interface will help you get through available tracks with titles, artists and albums. If you're a fan of a particular genre, the app can also provide new tunes recommendations. The library is massive, so you'll never have a shortage of options. Once you find the headline you like, you can play through the built-in MP3 player. The player performs all the necessary functions, but not much more. More. You can go for a download feature that stores MP3 audio files on your phone. This app is free, but it will ask you to leave a review or evaluate it before you can play the song. In addition, the song may appear, but will not be available for download. Where can you run this program? You can run the MP3 Juice Free Music Download app on Android 4.3 and up. Is there a better alternative? Yes. MP3 downloaders are numerous now, and there are more polished alternatives. Such examples include Google Play Music, Music Paradise Pro, and SoundCloud. While the idea of MP3 Juice is excellent, the actual app is lacking. It's too simple, pop-ups are annoying, and too often, songs don't exist to download. Should you download it? No. There are much better free music downloaders. Apple Music is a great system, overshadowed by a terrible application with many errors. Songs will randomly get dropped from playlists, downloading music to play offline can be unreliable, and the app itself often crashes right without warning. More images Play and listen to your favorite songs on your Android with Apple Music. Apple Music allows you to access your Apple Music account along with your own music collection and enjoy it on your Android smartphone or tablet. Apple Music offers a collection of more than 50 million songs from its catalog. You can browse and stream the latest songs, get hand-picked personalized recommendations from music experts based on the music you love, and view the best music curated by the service's editors. The service also offers a radio-like system that allows you to discover new music and tune in to radio shows, interviews and more, either on Beats 1 or at stations made by Apple editors. You will also get to connect with your favorite artists by learning about their inspiration and effort with photos and videos as well as their music. Apple Music lets you create playlists in the app that's transferred to all devices. You can mix in your own local files with music from the service. Visit Tom's Guide for free Android apps and for the latest news and apps. And if you have any Android problems, check out the tips on the Toma Guide forums. Download YouTube Music uses a huge amount of music already on the video service YouTube and creates a service that is more acceptable for listening to sound. The app itself is really more of a modified YouTube, where curation is focused on music and videos related to music, but YouTube Red completely changes the game, turning the app into a full-fledged music streaming service, complete with standalone and background streaming, and even the great feature of just streaming audio without video. More images Listen and watch music on your Android device with YouTube Music. YouTube Music is a free app for Android that not only allows you to find all the songs of the song looking, but also allows you to discover new songs. Explore the various playlists and recommendations offered by YouTube Music to fit your context, tastes and trends. This new music streaming service from YouTube has been completely reimagined. It's even easier to find the albums, singles, concerts, covers or remixes you're looking for. For example, a new feature might find a song by entering lyrics. The paid version of YouTube Music (Music Premium) offers continuous listening without advertising or downloading for offline listening through the Offline Mixtape feature. Check out Tom's guide for more information about Android and Android apps. Visit the Tom's Guide forums for Android issues Download a lot of people these days have switched to some kind of music streaming service like Pandora, Spotify, Google Play Music, or Apple Music. However, there are those of us on the left who hang on to our media collection because streaming isn't quite good enough yet. If you have your own music collection and a stock music player doesn't do it for you, then here are our picks for the best music player apps on Android! Of course, if you need apps that stream music, we have a list for that here! Those with LG V-series smartphones should probably use Poweramp, LG Stock Music Player, or UAPP. They just work better with the LG V-Series amplifier/DAC combination. Finally, here's our list of recommendations for music players on Android Auto! AIMPBlackPlayer EXJetAudio HDMediaMonkeyMusicletNeutron PlayerPhonographPlayerPropowerSarBonus: USB Audio Player ProRead Next: The best free music download sites on the Internet that are legalAIMPPrice: FreeAIMP is a pretty powerful mobile music app. It supports the most common types of music files, including props such as FLAC, MP3, MP4 and others. You'll also get plenty of customization options, themed and other fun things like this. The app has a simple user interface, and we had no problem getting around and listening to music. It keeps it simple with a decent material design interface. We also praised its outstanding equalizer, http live streaming, and volume normalization. It's definitely a step up from most major music player apps. There is also a desktop version in case you want to kill two birds using one app. BlackPlayer EXPrice: \$3.29BlackPlayer is a simple but elegant music player that puts very little between you and your music. It works on the tab structure and you can set up tabs to only use the ones you really want. On top of that, it has an equalizer, widgets, scrobbling, ID3 tag editor, ad-free, theme, and the most commonly used music files. This is an delightfully simple and fantastic option for fans of minimalism. The free version is a bit bare dice with a paid version providing a lot more features. Fortunately, the pro version is not expensive. By Po Po July 2019 update, the free version of BlackPlayer seems to be missing in action. We'll check back in a few months to see if it comes back.jetAudio HDPrice: Free/\$3.99 and \$2.99jetAudio long time favorite Android users because it has enough features to be better than most, but still simple enough for everyone to use. This one features various audio enhancements that come as plugins, so you can customize your music experience a little more than usual. It also comes with

an equalizer (complete with 32 presets), simple effects like bass pulse, tag editor, widgets, and even MIDI playback. Free and paid versions are almost identical. The paid version simply removes ads and adds themes. You can also use this for free if you subscribe to Google Play Pass. MediaMonkey Price: Free/\$2.49 MediaMonkey is a bit of a dark horse in the music player app business. It has a ton of features, including organizational functions for things like audiobooks, podcasts, and the ability to sort songs by things like composer (instead of just being an artist). It also has basic things like an equalizer. What makes MediaMonkey a truly unique music player is the ability to sync a music library from computer to phone (and back) via Wi-Fi. It's a bit of a complicated setup, but it's almost a one-of-a-kind feature. Despite the learning curve, mobile and desktop versions are some of the best one-two combos, even if the desktop version is a bit pricey. Musicolet Price: Free Musicolet is an app for no-BS music players. It has many desirable features, including many that you don't often associate with a player's music apps. This includes a truly standalone experience, a lightweight user interface, and a small APK size. In addition, the app has several bursts (another rarity), equalizer, tag editor, support for embedded texts, widgets, browsing folders and more. His non-nonsense approach is refreshing. This is a great option for people who just want a music player who plays music without a ton of extra stuff. It is also completely free without any in-app purchases and, due to lack of internet access, without advertising. Neutron Player Price: Free trial / \$5.99 Neutron Music Player is another music app that is not as popular as it probably should be. It has a 32/64-bit audio rendering engine that (according to developers) is independent of Android. The idea is that it helps the music sound better. It also has many other features, including support for more unique file types (flak, MPC, etc.) built-in and a host of other audiophile-specific features. It's a bit expensive, and the user interface is definitely not the best on the list. However, everything else about it is good. Phonograph Price: Free/optional donation Phonograph is one of the few good open source applications. It positions itself as simple, lightweight, and and Use. In most cases, this is true. It has a classic, simple user interface Of Material Design. It is quick to move through as needed. You can also change the theme if you want, but the theme editor is not particularly powerful. Along with this, you'll get Last.fm, tag editor, playlist features, home screen widget and some other navigation features. This is a very simple and great option for those who just want to listen to their music without anything getting in the way. This app is also available without in-app purchases with Google Play Pass. PlayerPro Music Player Price: Free/\$4.99 PlayerPro Music Player is another lesser known music app that should be getting a little more traffic. It has a good interface that makes everything easy to use along with skins that you can download and install for more customization. You'll also get support for video playback, rare ten-team equalizer, Android Auto and Chromecast support, various sound effects, widgets, and some fun little features such as the ability to shake the phone to get it to change tracks. It even supports Hi-Fi music (up to 32-bit, 384 kHz). You can demo the app for free before forking out \$4.99. Poweramp Music Player Price: Free/\$3.99 Poweramp has long been one of the go-to music player apps of choice for many Android users. It has a sleek interface with themes that you can download from the Google Play Store. The interface can be too smart for its own good sometimes. Otherwise fast, efficient and powerful and themes are available if you want to this route. The app also includes a variety of playback features, including gapless playback, crossfade, and it has support for multiple types of playlists along with Android Auto support. You'll also find widgets, tag editing and other settings. This is a powerful player who seems to strike the right chord with almost everyone. Pulsar Music Player Price: Free/\$1.99 Pulsar is definitely one of the best music player apps available right now. Features include beautifully made Material Design, Tag Editing, Gapless Playback, Smart Playlists, Sleep Timer, and Last.fm scrobbling. Puslar also has Chromecast support and some of the best Android Auto Support we've seen of any app on the list. It's not as feature heavy as some of the paid options, but that doesn't necessarily mean it's bad. This is a great option for those looking for something minimal, light, and good view. The pro version is inexpensive and only adds a few more features. Neither the free version nor the premium version has advertising. Bonus: USB Audio Player Pro Price: \$7.99 USB Audio Player Pro is the king of its own niche. He Works as an audio player for just about anyone. It comes with UPnP support, a bit of extras like gapless playback, a 10-band equalizer, and an attractive, functional user interface. However, where this one really really for the audiophile crowd. The app supports up to 32-bit, 394kHz native audio with support for FLAC, MSA, DSD, SACD, and a ton of other audio codecs. In addition, it works specifically well with USB DACs as well as HiRes DACs like the one in LG phones. That's good because most other music players don't do it very well. You can even stream music (via TIDAL, zobuz and Shoutcast) through this app to use your hardware. It's a bit expensive, and those without special DACs definitely don't need anything like that, but it's better for those who use such equipment. If we missed any of the best music player apps for Android, tell us about them in the comments! This is an update to an earlier article, so check out the comments for some suggestions from our readers! You can also click here to check out our latest Android app and game lists!
