Big ideas in fourth-grade science include the study of science within the following topics: Organisms and their environment (behavioural models and changes in the environment); Astronomy (Earth, Sun, Moon and Planets); Weather (water cycle, clouds and severe weather conditions); and Properties of light and electricity (reflection, refraction, as well as series and parallel circuits). The life cycle is the stages of development through which the body goes, starting from the egg and growing up in adulthood. Each of the living organisms has its own unique way of reproduction, childbirth, growth and development. Read more often...

iWorksheets: 4Study Guides: 1Vocabulary: 5FreeCells are the building blocks of life. All living things are made up of cells. A single-celled organism consists of only one cell, while multicellular organisms are made up of cells only. Read more often... iWorksheets: 4Study Guides: 1Vocabulary: 3Agon classification is the process of grouping living organisms into certain categories based on their characteristics, characteristics and appearance. The order of scientific classification of the kingdom, the phylum, the class, the order, the family, the genus, and the species. Each time we move to a different classification category, the groups are smaller and more specific. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 4Did you know? There are more than 600 named muscles in the human body. Your HEART is considered a muscle, a heart muscle. The biggest bone in your body is your femur, which is your femur. If you make a mark on the trunk of a tree, it will remain the same distance from the ground! Read more often... iWorksheets: 3Study Guides: 1Gae look at Earth from the inside... The Earth consists of three main layers called bark, mantle and nucleus. Read more often... iWorksheets: 4Study Guides: 1Vocabulary: 9Did Do you know that three-quarters (3/4) of the Earth is covered with water? Fresh water is water containing very little salt. The oceans are made of salt water. Ninety-seven percent (97%) of those who said they would like to have a Earth's water is salt water. Throughout the water cycle, water can be solid, liquid and gas. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 2What is an ecosystem? The ecosystem is a living and inanimate component of the environment and how they interact with each other and the environment. There are several different ecosystems on Earth. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 3Electricity flow electric charge. The atoms are made of three different particles, some of which have a positive charge, some have a negative charge and some have no charge at all. Static electricity is an imbalance of positive or negative charges between objects. If two objects have opposite charges, they will pull towards each other. Read more often... iWorksheets: 4Study Guides: 1Vocabulary: 2S All Need Energy. Every living organism on energy to live, including plants, animals and us! The main source of energy for all living things on Earth is the Sun. iWorksheets: 4Study Guides: 1Vocabulary: 3Motion is the process of changing the location or position of an object. Strength is a push or pull on an object. Speed refers to the rate at which an object is positioned. Acceleration means going faster; slowing down means slowing down. Read more often... iWorksheets: 4Study Guides: 1Vocabulary: 3Many animals have become extinct over millions of years. Extinct means no longer live on Earth. Animas that are extinct include dinosaurs, saber-toothed tigers, and dodo birds. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 4 When you investigate, you can make predictions, interpret your conclusions, draw conclusions and justify your conclusions. The experiment should collect data to justify its findings. In the course of the study, you can formulate and justify your predictions based on the relationship of cause and effect. The reason makes something else happen. The effect that comes from the cause. Read more often... iWorksheets: 3Study Guides: 1Animals have certain body parts and structures to help them survive in the Earth's environment. For example, animals have certain parts of the body, such as legs or wings that help them move, and mouths or trunks or beaks that help them drink water. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 4Animals are categorized into groups to make it easier for scientists around the world to study them. Scientists classify animals into two main groups: vertebrates and invertebrates. Read more often... iWorksheets: 4Study Guides: 1Vocabulary: 5Light is a form of energy that travels in waves. Reflection occurs when light rays bounce off the surface, such as when you see your reflection in the mirror. Absorption is when an object receives a light wave. Refraction is when light bends, moving from one environment to another. Sound is a type of energy that travels in waves that is caused by vibrations. Vibrations are movements that develop quickly back and forth. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 3Why are you measuring, calculating, creating graphs and diagrams, or using numbers anyway... it's the use of your math skills. During many scientific studies you may have to measure the length, width, height or weight of different objects. You may also need to measure the temperature of the air or various liquids at the conclusion of the scientific study as well. Read more often... iWorksheets: 3Study Guides: 1Matter is all around us! Matter is all that takes place and has mass. Matter is made up of atoms. Atoms are the main building blocks of matter and make up all objects. States of change solid, liquid or gas. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 2Our body consists of many organs and systems that all work To keep your body working properly: skeletal system, muscle system, circulatory system, respiratory system, digestive system, nervous system, excretory system. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 5What can be found in the solar system? The planet is a large body that orbits the Sun. Asteroids, comets and meteors are made of pieces of rock and ice. Asteroids are small pieces of rock that orbit the Sun. The comet's tail consists of evaporating gases and dust that flow behind them as they fly through space at a very fast pace! Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 3 Reproduction Process. Fertilization. Seeds. Lessons checkpoints: What is one of the reasons why a plant has nectar? What do mosses and ferns produce instead of seeds? What is the name of the female flower organ? Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 2Plants are living organisms, composed of cells. Plants need sunlight and water to live and grow healthy. The plant has different parts that are all important for keeping the plant alive and healthy: roots, stem, leaves. The roots of the plant collect water and minerals from the soil for the rest of the plant. The main work of the stem of the plant is to transfer water and minerals from the roots to the rest of the plant. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 4FreeWhat is in the rock? The rock is made up of many tiny pieces of minerals. What are minerals? Minerals are natural, inanimate crystals. They come in different sizes, shapes and colors. Rock types: Sedimentary cliffs, Igneous Rocks, Metamorphic cliffs. Rock cycle. Read more often... iWorksheets: 4Study Guides: 1Vocabulary: 4Have Have You Ever Seen a Meteor Shower? Meteors are small fragments of debris from space that enter the Earth's atmosphere at an extremely high rate. They then turn into a par r leaving a strip of light that quickly disappears. You hear on the radio that the high air pressure system will move tomorrow, which means that there is a very good chance of clear skies. Read more often... iWorksheets: 3Study Guides: 1Vocabulary: 1Scientists classify animals into two categories depending on whether the animal has a spine or not. As you know, invertebrates are animals that do not have a spine and vertebrates that have a spine. Vertebrates are divided by scientists into five classes: fish, amphibians, reptiles, birds and mammals. Read more often... iWorksheets: 4Study Guides: 1Vocabulary: 4Many factors affect weather such as sun, atmosphere, temperature, water and air pressure. When the air moves from a high-pressure area to a low-pressure location, WIND is created. The movement and interaction of the air masses cause most weather conditions. The word climate refers to typical weather throughout the year in the same area. Read more often... iWork Sheets: iWork: Guides: 1Vocabulary: 4 In order to continue to enjoy our site, we ask you to confirm your identity as a person. Thank you so much for your cooperation. What does a living thing do? Give your blossoming learner a fun way to identify live things with this coloring series. See if it can show you what makes every living survive in these pictures (air, water and energy). ☐I need to collect☐Incommon Basic State StandardsTexas Basic Knowledge and Skills (TEKS)Virginia Standards of Learning (SOL)BC Performance Standards Alberta Research Program Australian Curriculum (ACARA)Victorian Curriculum (F-10) No standards related to this content. Rainforest Food ChainRainforest FoodChildren learn about the feeding cycle in the rainforest as they color in a scene of snakes, butterflies, leopards and other forest creatures.
