IPMI was the main reason I bought The Mainboard, since I don't have a display in the rack and don't want to work in the basement if something goes wrong. But I can't make it work, probably. After a couple of hours - I have a connection to the network, you can read the data in linux (ipmitool), but the web interface does not accept any user credentials. First I tried with the administrator/administrator and after going through all the browsers, I added a second manually with ipmitool - not working. Does anyone have an idea? In my search results to the topic I found many questions but no solutions. I have two weeks to make him work to decide to return him or live with him. Best Tim;dr; bought a new billboard with ipmi, but the user's credentials don't work.
