BeatSnoop provides access to more than a thousand songs, with more music being added around the day, including albums, albums, and singles. By allowing embedded audio files anywhere, BeatSnoop can be combined with Twitter and Facebook to allow members to reach a better audience. By clicking the Share button, which corresponds to the site where they want to promote shared content, such as Facebook, and by endorsing the post, artists and publishers can allow audiences on that site to see the content through the desired content. More than half of the songs that are downloaded play within the first 30 minutes, and 90% of all downloaded tracks get listened to by at least one user. It only takes one click to share sounds on Twitter, Google, Facebook Beatsnoop offers advertisers the different types of ads described in their Ad Specs as: banner Ads.It is available worldwide - music can be viewed or searched by artist, album, genre, playlist, and label. Beatsnoop was launched in September 2016.Features - Users can create and share playlists, or edit them with other users, making this playlist a joint playlist. Supports AIFF, WAV, FLAC, ALAC, OGG, MP2, MP3, AAC, AMR and WMA files and transcodes them at 128 kbps. FOLLOW US Fildo is an app that will allow you to stream and download your favorite music. You can download your favorite singles, whole albums and with just a touch you'll even have access to a whole discography if you want. And all this in a matter of seconds. of Fildo's main advantage over other similar apps is that it doesn't actually store any content. The app simply acts as a link between users and other services (such as NetEase) from there you will be able to The songs are comfortable. All you have to do is enter in the title of the band you are looking for or the track you want, and after a few clicks it will be ready for you to listen and enjoy. Fildo is a pretty solid music download service, despite how ugly this interface really is. This will give you the opportunity to enjoy thousands of new songs, via streaming or live downloads. Setting it up is simple, just look at the app's configuration to choose which folder you want your files to download by default. Update and correct information about the album. Change the name of the song, edit the artist, album title, genre and others. Create an album cover/art while playing music/mp3 songs. The music album editor will fix and update id3 (ID3v2) tags from Music/MP3 files, as well as update information about the Song Database (MediaStore) from your Android phone. With the music album editor, you can manage your song list for Google Play Music.*** App Features *** the song's title Update, Artist, Album, Year and Genre** Update ID3 Art/Image/Cover* Update Mediastore Album Art/Image/Cover* Merge Songs on Album* Unmerge Song from Album* View From The Song List* View from the list of files (update the list of songs) * UNDO latest stream updates and download the best new songs and playlists Browse music from the best categories such as hip hop, rap, RCB, EDM, Afropop and Reggae in the free Audiomack music app. Download songs and even listen offline, without using your data! Apply the means of your music bass booster or volume steering to create a phenomenal sound you will never forget! Download this app now and start listening to free music! Thank you. We're well into the streaming generation of media consumption with music downloads in the Spotify era, and it's starting to feel a bit like DVDs in the Netflix era. With what's said, there's just something reassuring about having your music right there on your device without worrying about the vagaries of bad internet connections or keeping yourself entertained on long-haul flights. You probably want an app to download music for your Android phone to download music to your device. Here are our favorite apps to download music for Android that won't cost you a dime. Note: Some of these apps must be downloaded from outside the Play Store and will require you to have unknown sources on Android. 1. Fildo there are two different versions of the Fildo app - one Music Player on the Play Store, but that won't help you MP3 downloader you're looking for. To get a version of Fildo that allows you to download free music, you need to install APK from the official Fildo website. If you have one, use the app search to search for specific songs or albums you want to search for. You can also use various top charts from different music sites that the app integrates with if you want to explore the hits. Once you find the album or song you want, click the I icon in the top right corner and then choose the appropriate option to either download the music, create a playlist or its right then. 2. YMusic One of the most elegant and official looking music download apps, YMusic lets you play any YouTube video as an audio file, even allowing you to run it in the background on on Phone. The real kicker here is that you can also download videos as audio files. You have the option to download them in M4A and MP3 formats, and it has a great library user interface that subsequently lets you manage your music files just like you would in the music player app. Of all the options on this list, YMusic is the hands down the most convenient (although you have to download it from outside the Play Store) and is the most reliable. For these reasons, he tops our list. 3. SoundCloud Downloader Note: requires Xposed Framework and root Android device. Most of the apps on this list don't require rooting or Xposed Framework, but it's a challenge to find an app that can download mixes and tracks from popular music streaming site SoundCloud. SoundCloud Downloader Xposed Module integrates into the SoundCloud app, creating an additional option in the three-point menu that lets you download all the tracks you want. That's all there is to it. It's a very simple module to use, but if you don't want the hassle of rooting your phone and installing the Xposed Framework, read on for our more easily accessible apps. NewPipe While NewPipe still feels like a bit of work in progress, it certainly does the job when it comes to downloading music. It's open source and constantly improving. Now it has the support of SoundCloud, MediaCCC and FramaTube downloads as well. By default, the app opens as a YouTube interface. Simply select the video you want to download and then tap the download icon at the top right and choose whether you want to download it as video or audio and in what format you want it in. 5. GTunes Music Downloader Stary, but goodie ... like Tom Waits. GTunes is looking through a few great areas of downloadable music for your queries - you'll find millions of artists and songs from generation to generation. The search options are pretty rudimentary, so it's best to use if you know exactly what songs you're looking for and just want to get out there and download them. Note that when we used an app from four search engines, only C got the results, so try using that one before complaining that it all doesn't work! GTunes has its own built-in player, too, and even lets you trim your tunes and set songs like tunes. It's all pretty basic stuff, but rounds it up to a decent little package. 6. SONGily Play Store ad for this is somewhat confusing, suggesting that you should be some sort of member to enjoy this app. Just This is. The free version of SONGily is supported by advertising and has access to a healthy supply of music, new and old, from artists, both mainstream and obscure, from music to charts to sea shacks. (It's true I found the shacks out of Creed IV is here.) With each song you find, you'll see options like playing and downloading songs that you listen to, and they recently added a feature that lets you upload videos as well. This is exactly the kind of app that I can imagine Google doesn't like too much, so don't be surprised if it disappears from the Play Store and you find yourself having to download it manually. 7. TubeMate Sometimes the best apps for free music download are those that are not even designed specifically for this purpose. TubeMate is an app that allows you to upload YouTube videos in a number of formats, including audio only. As you probably know, YouTube is one of the best places to listen to your favorite music, and thanks to TubeMate, this is one of the best places to download this music, too. You can download TubeMate here (Google doesn't allow it in the Play Store, presumably because it encroaches on YouTube), and when you try to download videos as audio (M4A or MP3), you'll also get prompted to download the MP3 Video Converter, which syncs with TubeMate to convert the video into audio. 8. 4Shared Famous file-sharing repository 4Shared has been doing rounds on PCs for years and it has proven a huge hit on Android as well. Again, this isn't just for music, since users can download any files they want to it, but it's as good for finding music as anything else. (There is even the ability to search specifically for music files.) 4Shared can be downloaded from the Play Store, but not in all countries. If you can't get it from the Play Store in your country, you can download the free APK here. 9. Audiomack If you want to know that the music you download won't infringe any copyright and you're also open to testing new talent in hip hop, electronic and reggae arenas, then give Audiomack a try. This app gives a platform to artists without official distribution points at the same time with the content filtering system in place to make sure that the material there is of good quality. This good-natured project has already led to the fact that such hip-hop stars as T-Wayne, Fetty Wap and Migos, began to record deals with the label and give you a chance to find the next big star. Looking for more apps to play around with on Android? How about a list of the best Android screen recording apps, or if you want to test your hacking skills, here's a list of some of the best Android hacking apps. Related: Is this article useful?
