After I updated to the very last at the time (2202) I only got a black screen. I downloaded the old version and the PC started. I'm looking into trying to update again and was wondering before doing something that might cause problems with the black screen. I'm updating using a USB BIOS flashback utility. I follow the leadership. 03-25-2017 03:58 #2 It may be because it does not blink properly. 1) Empty usb flash drive format on FAT.32 2) Download the bios file from the asus 3 support center) Remove the bios file to usb flash drive 4) Rename the bios file in M8H. CAP 5) Insert a flash drive into the ROG Connect 6) Press and hold the bios flashback button until it starts flashing and then release. Blinking should get faster and faster then stop, the upgrade process should take about 90 seconds to complete 7) When flashing stops, run the computer 03-25-2017 04:06 PM #3 Will try it! Thank you. I'm actually using the max as your guide shows. Will write back after I've done it. 03-25-2017 05:40 pm #4 originally published by Nate152 This may be because it does not blink properly. 1) Empty usb flash drive format on FAT.32 2) Download the bios file from the asus 3) Remove the bios file on usb flash drive 4) What motherboard do you use? As exapmle Formula Maximus VIII will be renamed M8F. CAP 5) Insert a flash drive into the ROG Connect 6) Press and hold the bios flashback button until it starts flashing and then release. Blinking should get faster and faster then stop, the upgrade process should take about 90 seconds to complete 7) When flashing stops, run the computer I get the same. My screens don't start after the bios update. I did, however, use the M8H instead as a guide to say OT should be that. 03-25-2017 07:07 PM #5 03-25-2017 09:30 PM #6 originally published by Nate152 Try to upgrade to bios version 3101. I'm a little afraid of updates as it seems harder every time for me to get a computer to start Aka lower it back. I do, however, try later because now some friends and I'm going to play. But should I continue with USB BIOS BIOS way or should I try downloading the UEFI update from there? I read that I may need to click on the CMOS reset and when the update is completed let the computer load in a few minutes in order to start completely. 03-25-2017 09:36 #7 03-26-2017 03:20 #9 Just clarify in full. 1. Turning off your computer. 2. Open the case and click Clear CMOS. 3. Insert USB, including the M8H.cap file in root dir 4. Click the Flash button and let it flash blue until it turns 5. Start your computer and look at the updated biographies. 03-26-2017 03:32 #9 07-27-2017 09:16 #10 Hello. I finally did it and my computer is dead and it feels like this. I tried to bring it back to the old Bios, but even that doesn't work now. When I download my computer I get d0 ccode now. If I push memOK I get to Bios. I searched the internet and most talk about RMA. Update: Tinkered and made more times. Got it to boot while using the 2002 Bios Version. So I managed to save the computer but couldn't update the biography anyway. The latter, edited by Wowers: 07-27-2017 at 12:29 p.m. 01-02-2011 10:45 AM #1 How to use ASUS Republic gamers USB BIOS flash back Minimum hardware requirements for USB BIOS flash back to have a motherboard with ATX Power and connected to the wall. You don't need to have a processor, RAM, graphics card, or hard drive connected to the system. The system must not be turned on or pass the POST (Power On Self Test) 1. Purchase USB Thumb Drive 2. THE format of the USB drive with the FAT32 3 file system. Download the latest BIOS for the motherboard and place the extracted ROM file on USB drive 4. Don't forget to rename the file according to the motherboard model. If you have the extreme of Rampage III, rename the file to R3E. If you have Maximus IV Extreme to rename the file to M4E. 5. Place the USB drive in the ROG Connect 5 USB port. Keep the Rog connection button down for 5 seconds and the amber light near the BIOS chips will blink for a few seconds, and when the blinking stopped the bios has been successfully updated. Youtube Video: HiTechLegion Deno Video: BIOS Flashback Help) has also been updated for CAP update: latest edited q; 10-19-2012 at 07:04. 07-10-2011 02:08 #2 ROG Connect USB BIOS flash video guide in progress 07-10-2011 02:25 am #3 No processor, No Ram, this hoarding 07-22-2011 04:54 am #4 originally published by MarkedOne No CPU, No Ram, this accumulation of BIOS Flash back saved me a lot of time and money, avoiding RMA for bad BIOS 08-30-2011 01:43 #5 Why doesn't everyone do that?
