This site is not available in your country Expert tips on planning a new wooden deck, including how to buy the best deck materials, how to plan the construction of the deck, and the choice of deck materials. The low-level deck expands the living quarters of this house into a courtyard. A beautiful, versatile wooden deck can add fun to everyday life. The warm color of the tree and the soft texture bring something out of the forest to your landscape, and if painted it can hold its own even in the most formal company. Equally important, deck is a long-term investment because it increases the resale value of your home. The deck provides a sturdy surface that requires little or no classification and minimal maintenance. Because the flooring is raised above the ground and can dry quickly, it is natural where drainage is a problem. Here are some basic planning, design, and building tips for the deck of your dreams: Planning the site for the new DeckSurvey Yard and solving what problems the deck should solve. The decks can be built over steep sloping ground, along the side yard, or even in front of the house as an entrance. Consider the direction of the wind, the amount of sun or shade desired, the presence of water and electrical sockets, as well as other fixed conditions. Typically, the south-west and south-eastern corners of the house offer the best combination of sun and shade. New deck planning guidelines Be sure to check local building codes and regulations to determine what guidelines and restrictions you should follow. Consult a construction specialist if the deck needs to be extensive or construction difficult. If you decide to do it yourself, you can divide the larger design deck into smaller, more manageable projects. Lumber for DeckSoftwoods like redwood and cedar is traditional, but hardwood imports offer new options. For even less maintenance and environmental impact reduction, consider the so-called composite flooring, which is made of recycled materials. Note, however, that you will still need wood or other material for structural composite members not being judged by strength. Decking Lumber GradesThe rugged, knot textured garden varieties that are more economical than architectural classes are ideal for outdoor structures. Choose all class hearts, such as building a heart or deck heart for applications on or near the ground. The shell strips classes, Building Common and Deck Common, for example, are a good choice for ground applications such as deck boards themselves. The equipment for DecksA is a variety of joist hangers, patented connectors, and deck mounts available to help the do-it-yourselfer. Use high-quality, hot galvanized galvanized, stainless steel or aluminum equipment. To avoid cleavage, pre-drill holes for nails or screws on the ends of the floorboard. The RailingsTypically deck, any deck more than 30 inches above the ground requires a railing or a similar barrier. In addition to security, security, make an important design element, too. What kind of view? Use the railing to frame it or block it. Fill the gaps with vertical plans, acrylic or grill. The wooden deck FinishesFor long-lasting good appearance and performance, the quality of the water repellent finish containing mold and ultraviolet inhibitor is recommended for the best results, the finish should be applied directly to the lumber before construction and cover all sides, edges and ends. A second app is recommended when the deck is complete. The amenities for the DecksAfter deck are finished, adding amenities that completes the work of individualizing your project and making it a truly outdoor living center. Popular additions include spas, shade shelters, privacy screens, built-in benches, and planters. Think about how much sun and shade you want to have on deck and how private the place will be. Wherever the location is, it should be easy to get from home, especially from the kitchen if you plan to eat food there. Draw a detailed sketch. Your drawing doesn't have to be artistic, but it should include as many details as possible. Think about what features, such as built-in seating, planters, or barbecues you would like to have. Notice any problems you need to deal with, such as a sloping area or a nearby tree. Approve plans. Make sure they follow zoning rules in your community and are approved by the construction department, which may require you to get permission before starting construction. Originally published: August 01, 2005Orlignally published in Reader's Digest Enjoy the best stories, tips and jokes! These free deck plans will help you build the deck of your dreams. With a bit of know-how and some hard work, you'll sit on a deck that you built yourself. Each free deck plan will tell you what materials, materials and tools you will need to collect, as well as cutting instructions. They then step you through the construction deck with photos, videos and illustrations to lay it all down. None of these free deck plans require any of your personal information, and they are all completely free for you to download and use to build your own deck. I have many other free Woodworking, apart from these free deck plans, is like loose plans on how to build raised planters, sheds, gazebos, porch swings, gazebos, doghouses, picnic tables, chicken coops, and even houses and cabins.
