Source: Android Central Best Prepaid Phones Android Central 2020 The idea of a prepaid phone has become increasingly vague in recent years. Technically, almost any phone can be a prepaid phone these days - that is, almost any phone can be financed or bought directly and used in a prepaid network. However, most prepaid buyers are looking for value deals, so we've compiled some of the best phones that will work with major prepaid carriers under \$325. Source: Android Central Google Pixel Series Phones is the purest Android experience you can get. Pixel 3a brings the price of this experience down to something many more people can afford. You get the same camera seen in the Pixel 3 with all the great line handling known to bring the photos to life. You even get exceptionally low performance thanks to Night View. Since this phone comes directly from Google, there is no waiting for Android updates and as the owner of Pixel, you are first in line for the latest software. You get a clean Android build without a bunch of extra software you don't need. You'll also get a 5.6-inch OLED display as well as 4GB of RAM to keep things running smoothly. The price is higher than other phones here, but with more frequent software updates until May 2022 from Google, this phone should last you a long time before you need an update. The Pixel 3a will also work for most carriers, so you have many options to switch without giving your phone. Great Pixel Camera OLED Display Pure Software Guaranteed Android Update A Little Expensive Battery a little little Pure Android with Pure Android updates with a great camera makes the Pixel 3a one of the best phones to use with a prepaid carrier. Let Google handle the updates. The Moto G7 Power packs a crazy 5,000 mAh battery, making it one of the most durable phones available on Verizon's prepaid network (or anywhere). Even better, you get it on a huge deal. Its 6.2-inch display is surprisingly easy to use in one hand thanks to a 19.5:9 side ratio, and you'll get a clean build of the Android 9 Pie backed by a respectable Snapdragon 632 processor and 32GB of expandable memory. Unfortunately, it is unlikely that it will receive many future updates. The 720p resolution on the G7 Power display means it doesn't look as sharp as it does with other phones, but it also contributes to the phone's outstanding battery life. The G7 Power can last as long as three days on a single charge, depending on your use, making it the perfect phone for weekend hikes or travel days when you're not you'll be next to the charger. You can even use it to charge a friend's phone with a USB-C cable! Massive Battery Pure Android 9 Pie Software Big Display with tight framing Expandable Storage Unlikely to get platform upgrade 720p display is not as sharp as other other The battery and modern Android Moto G7 Power software has modest features, but its namesake 5000mAh battery makes it one of the most durable phones you can buy. Source: Apoorva Bhardwaj/ Android Central Xiaomi makes some of the best phones available around, and it's possible you've never seen one. Fortunately, the Redmi Note 8 Pro works in the NETWORKS of ATT and T-Mobile and brings some great specs to the table. If you're looking for something with a little more flair than most budget phones, the Redmi Note 8 Pro has a striking design often reserved for more premium devices. The 64MP rear camera connects ultra-wide and macro camera for a ton of shooting options. The 20MP front-facing camera sits a step up and allows the screen to reach the edge of the screen coming in at 6.53 inches. 6GB of RAM should keep things running smoothly with the octa core of the MediaTek processor. It is worth bearing in mind that this phone is not designed for the U.S. market and will not receive any support if it stops working. However, if you want great specs at a low price, this can still be the phone for you. Big Screen Big Battery High Class Specs Many Photo Options No U.S. Support doesn't work with all carriers Fast equipment and low price Xiaomi Redmi Note 8 Pro packs in great hardware with a large display and a reliable array camera. Source: Android Central Nokia 6.2 brings solid build quality to the sleek design segment of budget phones. The 3500 mAh battery powered the Snapdragon 636 processor with 4GB of RAM to keep the phone running smoothly for hours. The camera noting on the display allows the screen to max by 6.3 inches. This phone comes with 64GB of built-in memory and can be enhanced using a microSD card. You get Android 9.0 with the promise of future updates thanks to the support of Android One. This keeps the software clean and streamlined, making sure the phone is up to date faster than most other phones. Unfortunately, this phone is a GSM phone meaning you should really only expect it to work on T-Mobile or ATT networks. Android One software updates Robust Camera System Large Display Expandable Storage No support for CDMA BATTERY CAN be more of an Android stock in a sleek phone modern design with a large set of cameras and a sleek interface helps Nokia 6.2 stand out. Source: Daniel Bader/Android Central Standard Moto G7 brings a few spec beats over the G7 Power, but loses some battery capacity. This phone has a display of 2270x1080 with 4GB of RAM, making it not only sharper but also more fulfilling. If you like Motorola's style and software but want to keep things sharp, Moto G7 A great choice. This phone has a respectable 3000mAh battery to keep it running long enough for most standard use. It also has dual rear cameras coming in at 12MP and 5MP accompanied by an 8MP front-facing camera located in the centre centre Cut. If you buy it on Amazon, it comes with a built-in Amazon Alexa that can be useful. This phone works for all major carriers, so you can take it with you if you want to switch. It won't be the fastest or best phone in any task, but at this price, it's hard to beat. Sharp Display works with most carriers Good camera quality option for Alexa built-in software updates is not guaranteed the battery can be better than a large budget balance on price, the Moto G7 provides one of the best experiences around with fast hardware and support for most carriers. Source: LG's LG Stylo 5 doesn't win any awards for best design or best specification, but it has one distinct advantage: the stylus. The Stylo 5 combines the precision of entering the stylus with its beautiful 6.2-inch 1080p display. Hardware should be enough for standard use and viewing thanks to 3GB of RAM and the Snapdragon 450 processor. The rear camera will be able to take some decent photos at 12MP and the wide-angle front-facing camera lens makes it great for a video call. To go with the stylus, there is an integrated button to run Alexa and the 3500mAh battery makes the Stylo 5 one of the most productive budget phones available. The large full HD display stylus included Alexa hardware button Low Price Camera could be better Style from Stylus Precision LG Stylo 5 brings the precision stylus to the budget category with a great HD display and computing power to keep things fast. Most of these phones will work for any carrier, but some of them such as Xiaomi and Nokia will only run on T-Mobile or ATT networks. You may need to get a SIM card from Verizon or Sprint-based carriers to get activated. Carriers based on T-Mobile or the ATT network should be able to give up your SIM card to get going right away, which is great if you want to try more than one network. If you are looking for a great Android phone that will work on almost every carrier with no problems, check out Google's Pixel 3a. It comes with a slightly higher price tag than the rest of these prepaid picks, but it has an excellent camera and Pixel phones are first in line for new Android updates straight from Google. Credits - The team that worked on this guide Samuel Contreras When Samuel does not write about network and carriers, he spends most of his time researching computer components and obsessed with the fact that the processor goes to the ultimate Windows 98 computer. This is Pentium 3. We can earn commissions for purchases using our links.
