Spreader modular beams provide the perfect solution for most lifting requirements - versatile and cost-effective, the Modulift range has a capacity of 2t to 5000t with spans of up to 100m. Modular configuration and interchangeable components allow reusing dispensers on many lifts. Each modular Beam spreader consists of a pair of end blocks and a pair of Drop Links, with interchangeable racks that can be bolted into the assembly between the end units to either lengthen or cut the beam as required by the elevator, making them reusable at different ranges. Spreader Beams for up to 400t are available and available worldwide for distribution - please contact Ranger for an immediate quote or more details. Australia Match AS 4991 - 2004: Lifting Devices. DNV Standard for DNV 2.22 Certification: Modulift Distributor Designs meet the DNV standard for certification No.2.22 Lifting devices. Modulift is the first and only spreader Beam manufacturer in the world that has world-recognized DNV approval for all spreader Beams with a capacity of up to 1000t in accordance with the DNV standard for certification No. 2.22 for 2011 lifting devices, at no additional cost to the customer. For those customers who require a higher level of quality standard, Modulift also provides additional options for a specific third party check project. When a project requires the highest level of modulift certification, it is able to offer our customers a different degree of additional DNV certification depending on their individual quality control requirements, including: - Evidence-checking report and test entry - DNV Certificate of Compliance for Manufacturing and Testing (CG3 under ILO 152) Talk to Ranger about these additional services. Weight on Kit (kg) - Weight based on the heaviest distributor in the series using the configuration recommended in the user's instructions Modular spreader beams provide the ideal solution for most lifting requirements - versatile and cost-effective, the Modulift range has a capacity of 2t to 5000t with spans of up to 100m. Each modular Beam spreader consists of a pair of end blocks and a pair of Drop Links, with interchangeable racks that can be bolted into the assembly between the end units to either lengthen or cut the beam as required by the elevator, making them reusable at different ranges.
