The bridge often symbolizes in a dream how any transition dreamer can encounter in real life. Sigmund Freud gave the example of a woman who wanted to be a man, and she dreamed of bridges that did not reach each other. The bridge can also be defined as a symbol of change in life, crossing the path into a new or strange territory of life, or it may even point to male genitalia, as it bridges the gap between male and female sexual partners. In other cases, bridges can lead to symbols of birth and giving life. The bridge can be a transition from one world to the next, as is sometimes called the birth of a child. Time seems to be standing still as we do the crossing, wondering what the new world might welcome us to the other side of. They also include some interesting inhabited bridges, with a completely different kind of crossing. On the one hand, Ponte Vecchio in Florence was originally occupied by medieval butchers, most of whom lived above their shops. Today it is a tourist trap where you can buy jewelry, art and souvenirs. On the other hand, Stephen Hall's proposal for a habitable bridge in Copenhagen that combines sustainable technologies such as photovoltaic shell skyscrapers and wind turbine studded Skybridge with a mixed-use commitment - towers and bridges contain auditorium, offices, shops, skyways, and terrace. Wikipedia We also learn about the inhabited bridge, Kremerbruck, in Erfurt, Germany, which was built in stone in 1325 after being burned down seven times since 1156. TreeHugger has a love for inhabited bridges and has shown several suggestions; Laurie Chebbaud has won a competition to build a new London Bridge that has everything TreeHugger can love, including a vertical farm, farmers market, photovoltaic, wind turbine, cafes and shops. Rainwater is collected to supply the hydroponic landscape and toilets. Imagine housing, recreational and cultural facilities connected to a continuous, lushly planted, green strip floating above the water - an airy garden like the newest park of cities through which you can walk and wander and enjoy the most spectacular views of the bay. Antoine Grumbach designs a new London Bridge with a pair of 35-storey towers holding the bridge, which is lined with cafes, bars and shops, as well as trees, a greenhouse and a topia compared cafe. Permanent Nieuwenhuis developed a vision of New Babylon, where everyone lived in bridges above the ground, so that it remained open to agriculture, nature reserves and forests. The question is how people will live in a society without hunger, without exploitation, and without difficulty. Thus, in a society in which everyone without exception will be able to fully develop their creativity. This important and intriguing question evokes a forward image of a material environment that is vastly different from anything we can, from anything that has ever been created in the field of architecture and urban planning. See even more inhabited bridges on OOBJECT do you indulge in your favorite candy bar of other sweet treats? If you have a crown or bridge, there is that piece of candy can be disastrous for expensive dental work. In general, this should be avoided. Dental crowns are used for a variety of reasons, including restoring the lost tooth structure, root canal treatment, or cosmetic enhancements. Dental bridges are implants designed to cover the gap left by the missing teeth. Both are expensive and there is a lot of work and discomfort that goes into having them installed. Jennira Gonzalez/EyeEm/Getty Images Aside from the destruction that sugar has on teeth and gums, candy can cause a number of problems for people who have a crown or bridge. They include, but are not limited to: Breaking or Chipping porcelain: porcelain crowns and bridges are made to maintain normal forces that are common with food, but some types of candy can lead to a porcelain chip or break when you try to bite down on solid candy. Hard mints, candy covered with nuts, and peanuts brittle are particularly harmful because they require great strength to break. Fracture porcelain from a crown or bridge requires the adoption of a new restoration, which can be costly, and quite painful when a breakdown occurs. Lifting or loosening a crown or bridge: Sticky candies such as caramel, toffee, and gummy type of candy can stick to your teeth while you bite on them. In some cases, the force that is required to snatch the teeth apart can weaken the bond between the crown or the bridge and the cement used to ensure recovery on the teeth. Even if the candy doesn't dislodge them, a loose crown or bridge invites bacteria and sugars into the space between the tooth and crown, possibly causing the prepared tooth to decay. Loss of crown or bridge: In addition to tooth decay, a loose crown or bridge will eventually completely weaken, causing the recovery to fall off the tooth. Depending on when the crown or bridge falls, for example, while you sleep or eat, you may risk choking or chipping other teeth. In addition to the cost of replacing a dental implant such as a bridge or crown, which can range from hundreds to several thousand dollars depending on the work done, the act of replacing them can have devastating effects on the mouth as well. Any restorative work the dentist should do can mean damage to the pulp of the tooth. But it's definitely better to replace damaged dental work than to let it decay and possibly get infected. Always remember to brush and floss your teeth after eating candy, especially in the case of a bridge. Flossing under the bridge after eating soft candy will remove any extra sugar from the area under the bridge where the teeth are missing. What do you care?
