Regardless of your plan to prepare for ACT maths, whether you're self-taking, class or teaching, you need to work with real ACT Math practice materials. The ACT Math test will be unlike any other math test you have taken. You need to work with real material to get used to the pace and style of this unique dough. In this guide, I'll let you know where to find free and paid official ACT Math PRATIC tests. Best Practice ACT Mathematics-Free and Official These Tests are absolutely free. We've put them all together in one place for your convenience. ACT Math Free online sample tests This test format may be a bit clunky to use, but it's convenient and online. Answer all the options on the page. Then click on the answer below to see the answers to the question. Once you've checked your answers, you'll be able to go to the next page. There are 12 questions on the five-page page with a total of 60 questions (just like the real ACT Math section, which has 60 questions). To keep a realistic timeline, I recommend you give yourself 12 minutes per page (which is 1 minute per question) since you get 60 minutes to 60 questions on the actual ACT Math section. Take as much time as you need to check your answers on this page. Then go to the next page and give yourself another 12 minutes. ACT, Inc. has also released six full-length official practice tests. These are all former ACT exams that can now be used in their studies. All of them, of course, include the math section. You may notice a few years are missing and that's because the ACT duplicates the same test in different years. For example, the 2013-14 test is identical to the 2014-15 test. We've included a form ID with each test, so you can check it out for yourself (you can see the FORM form in the bottom left corner of each page on the test). While the Math section in the ACT has not changed significantly, we recommend starting with the most recent exams and working your way back, just to make sure your practical tests are as close to the actual ACT you will take as possible. Although all of these tests include a key answer, they do not come with explanations for the answer. The ACT's best math practice is paid and official while studying at ACT Math, and you want to get more than six official ACT practical tests. I highly recommend the official ACT Prep Guide 2019-2020. The book costs \$17 and it contains five full-length ACT tests. The book is written by act creators, so it's the real deal. Without buying Kaplan or Princeton Review for practical tests - their quality is inferior to those conducted by the ACT. If you're willing to fork out money to prepare ACT Math, this book is better than PDF files, it contains an explanation as an explanation for exams, as well as dozens of additional practice problems to work through. You can also buy the official guide for beginners is an act that has a new ACT practice and PreACT practice. It costs about \$23 on Amazon. There aren't many practice problems in this book, but if you're new to the ACT and still learn about it, this book contains a lot of information about the test itself. The possibilities of ACT Math practice are endless! Other ACT mathematical materials in general, we do not recommend the use of many ACT Math practice tests that have not been written by the ACT, since most are of poor quality. You want to use real practical materials to make sure you are taking tests that reflect the actual content and complexity of the real ACT. If you take practice tests done by other companies, they can be more or less difficult and may not include all content on the real ACT. However, some informal tests can be a great way to practice math skills if you don't try to practice ACT-style questions. ACT Math, more than any other section, is based on knowledge of mathematical content, so having a large amount of materials to practice the different mathematical skills required is important and poorly formatting doesn't matter as much. Check out our massive ACT training collection for some formal and informal tests. If you still want more ACT training materials, check out our guide to the ACT's best preparatory books. How to use these ACT Math Practice TETS in your training, even if you buy all the real ACT Math practice tests, you will only have about a dozen and each of these tests will take you an hour. So you want to make sure you get the most out of each one. Here are my best tips to make the best use of your ACT Maths Practice Test: Tip 1: Take a maths practice test in realistic conditions Take the maths section in one squat with the exact time. Use the clock to stride the hour-long math section. Sit down for the hour! It's not that long! You have to sit on the full test, so you get used to the timing and learn to pace yourself. You only get 60 minutes for 60 questions. Progress issues from easy to difficult. You'll need to work on spending less than a minute per question in the first part of the ACT Math section so you have just over a minute to answer the question to answer the more difficult questions at the end of the Math section. Don't give yourself extra time. This can allow you to make additional questions and improve your score. We want to use these practical tests as reliable indicators of your real account, so stick to real time. NOTE: Realistic practice means compliance with all test rules. You can only have a calculator for the math section. You must have your own phone. You have to use a pencil. Read our full guide to realistic practice. Tip 2: Review your mistakes when you finish the math practice tests, score your math test. Look at every mistake you made and try to figure out where you went wrong. If you miss this step, you don't learn from your mistakes and you will continue to do them over and over again. I recommend spending at least 30 minutes to an hour reviewing your ACT math test. It may seem time consuming, but it needs to be taken this time, so you'll learn from your mistakes. It's better for you to take three ACT Maths practical tests with a detailed review than six without review. Think about the quality of the quantity! Tip 3: Supplement with skill work there are some students who see an improvement in ACT maths by simply taking practical tests and familiarize themselves with pace and style, but this is rare. Most students need to do a more in-depth overview of math skills that they may have forgotten, never learned, or never quite mastered. If you find that you are not improving your practical tests, I recommend you take a look at our individual math content guides. These articles address specific areas of mathematics (e.g. linear equations, trigonometry, etc.) that you need to know to succeed in the ACT Math section. When you review your first practical test, find out the reason why you got each math question wrong: was it due to incorrect reading of the question? Or not knowing the contents? If you don't know the content you need to solve the issue, then you need to review this content! Tip 4: Get extra help if you need it! If you don't improve your score, you should supplement the practical tests with additional preparatory work, either tutor, class, book (such as those related to the above) or programs. While some students may learn from their mistakes on practical tests, most need additional guidance to point out their weaknesses and help them improve. However, a good training program should be personalized for your needs by focusing on your area of weakness without wasting your time covering topics you have already mastered. What's next? Now that you know where to find ACT Math practice tests, you can take a look at our ACT Maths guidelines to help you explore any individual subject of ACT maths from ratio to rotation, indicating probabilities: We've got your back. Stuck on ACT math problem? If you're stuck on a guide to study, a hands-on test, or you're worried about getting stuck on the day of the test, don't sweat it. We'll show you how to figure out when you're really stuck and what to do about it. Need help with ACT Math? We've compiled the best ACT maths software guide into one final guide to the ACT's maths curriculum. No more search ACT math tips and resources, they are available here. Want to improve your ACT score by 4 points? Check out our best-in-class ACT. We guarantee your money back if you don't improve your ACT score by 4 points or more. Our program is completely online and it customizes what you are learning to your strengths and weaknesses. If you liked this math lesson, you'll love our program. Along with more detailed lessons, you'll get practical problems organized by individual skills to get you to know most effectively. We will also give you a step-by-step program to follow, so you will never be confused about what to learn next. Check out our 5-day free trial: these recommendations are based solely on our knowledge and experience. If you buy an item on one of our links, PrepScholar can get a commission. You need to learn in the SAT Math section, but don't know where to start? And on the budget, too? Take it easy! In this article we have compiled a complete list of all the best (and free!) SAT Mathematics training materials and guides are now available online. Note: For information on the best SAT training materials that you should pay for, check out our picks for top SAT prep books. Picture Feature: Alan O'Rourke/Flickr The importance of using high quality SAT math materials is incredibly important to get your study materials from the right sites. The SAT is a very specific kind of test, and there are many (many!) websites and programs out there that unfortunately only offer substandard SAT resources. If you're studying using mostly below SAT materials, you won't get a clear idea of how you'll be doing on the day of testing. Test training is about evaluating and improving at the current level, but you won't be able to do so if you get a false sense of your skills based on poor training materials. Ultimately, products and test questions that don't accurately reflect the SAT are a waste of time. Therefore, it's best to prioritize official SAT materials. The SAT is designed by the College Board, and their free materials are by far the best place to start learning. From here, you can branch out into programs and materials that use (or very similar) official SAT material. Now let's take a look at the best resources that you can use for free official SAT Math practice questions. Ready, ready, go! Top 5 Free Resources for SAT Math Practice quality In this section, we go for the top five free resources that you can use for sat math prep quality. #1: College Board As the creator and issuer of the SAT, the College Board is the best place to start to collect free sat Math educational materials. The official website offers full-length SAT practice tests and practical questions for all sections. Free official full-length sat Practice Tests 10 official practical tests are currently available online. Each test comes with a key answer and detailed answer explanations to help you understand why you got the questions wrong. Practical Test 1: Answers questions Answer Explanations Practice Test 3: Answers to Answers To Explanations Practice 5: Answers To The Answers Explanations Practice Test 6: Answers to Answers Explanations Practice Test 7: Answers to Answers To Explanations Practice Test 8: Answers to Answers Answers Explanations Practice Test 9: Answers to Answers to Answers To Explanations Of Trial Trial The questions and questions answers the answers to The Explanation You probably noticed that The Practice Test 2 and Practice Test 4 are not on the list above. This is because they are no longer available on the internet! Because these tests were developed by the College Board, however, we are including them here. Keep in mind that you should definitely work your way through the eight tests that are on the College Board website first. Free Official Mathematical Practice SAT in addition to full-length tests, the College Board offers several SAT Math practice questions (as well as sample questions for all other sections of the test). For SAT Math, there are 30 questions resolved by the calculator and 18 questions without a calculator. While this isn't exactly the full section of SAT Math, it gives you the ability to get more exposure to the kind of math you'll see on the day of the test. When answering every question, try not to look at the correct answers at once. Instead, write your answers on a piece of paper as you take the test. Once completed, refer to the official explanations for the response; it will help you understand what your strengths and weaknesses are. Old Official Full-Length SAT Practical Tests While the latest practical tests will be most useful for preparation, you can also use any of these four old (until 2016) SAT practical tests. Most mathematical questions on them should be useful - just note that today geometry is less important, and the interpretation of data is more important. You may notice that there are some missing years (e.g. 2005-06, 2006-07, etc.). This is because the tests for these years are replays of them above. In other words, the four tests linked above are the only free SAT tests available in the last 10 years (except for the latest). No need to weigh the pros and cons here - all the resources we recommend are guaranteed to help you get a great SAT Math score! #2: The Han Khan Academy Academy is a nonprofit and partner of the College Council, which offers free online SAT preparatory programs and practice issues. While most of the questions come from official SAT practice materials (such as those related above), others have been created or adapted with approval or in tandem with the college board itself. Sign up for a free Han Academy account to access SAT research questions and materials, complete with guides and video explanations to help your study. #3: PrepScholar SAT Blog here at PrepScholar, we offer tons of free resources, including detailed guides to each subject of SAT math and a complete collection of our best SAT Math articles. All of our guides include definitions and explanations, examples of how you'll see the topic on the test, and real SAT practice issues with explanations of the answer. Browse our SAT Math guides below to get started! All guides are on the subject. Algebra Numbers Coordinating Geometry Points Lines and Slopes reflections, translations, and Plane and Solids Geometry Lines and Corners Circles Triangles Solid Geometry Trigonometry Formula 28 Critical SAT Mathematics Formula You Should Know Also, we have a strategy guide that will help you solve numerous SAT Math problems across the board: Connecting Answers Connection Numbers If you find our guides and quizzes useful, you can also sign up for a free five-day testing program. Our program evaluates your current strengths and weaknesses and adapts depending on your progress. This gives you practical questions tailored to your areas of improvement and provides an explanation for all questions. All of our questions are based on real sat test questions and although the full program is not free, we guarantee your money back if you don't improve by 160 points. #4: CrackSAT.net CrackSAT is a free, unofficial SAT website offering PDF files of official SAT practice tests and an array of both official and unofficial SAT Math questions. Many of the questions on CrackSAT come from SAT preparatory books to well-known test training companies including Princeton Review and Kaplan. While generally solid, informal SAT questions can vary wildly in quality, so don't rely only on them to give you a sense of your mathematical abilities. Most likely, it's best to use this site after you've exhausted all the official SAT resources above. What is particularly nice about this site is its organization: mathematical questions are available in both multiple choices and grids in categories to give you a full range of mathematical practice. You can also view problems by concept (e.g. linear features, exponents, and radicals, etc.). #5: Ivy Global SAT Practice Tests Finally, if you want to practice math in the context of more full-length SAT practice tests, use two unofficial Ivy Global PDFs (SAT Online Practice Test 1 and Practice Test 2) practice. These resources closely follow the SAT format and are very realistic. However, they are not perfect. Some of the math questions sections are too easy and not as similar to those on the SAT as they might be. There are also no explanations for the answer, making it difficult to determine how to find the right answers to the mathematical questions that you are wrong. You have collected all your training materials... So now? Ready to go beyond just reading about the SAT? Then you'll love the free five-day trial for our SAT Complete Prep program. Developed and written by PrepScholar SAT experts, our SAT program adjusts your skill level to more than 40 subskills, so you can focus your training on what will help you get the most points. Click on the button below. Try it out! How to use SAT Math Study Materials: 6 Tips is just as important to know how best to use your SAT training materials, how to know how to access them. These six tips will help you achieve your highest SAT Math score on Day. #1: Take the full practice test in one sitting you're probably most concerned about your SAT Math score, but it's still important to take a full SAT PRACTICAL test so you can see how you'll fare on the day of testing. While answering one or two math questions may not be too big a problem for you, in fact the SAT marathon and if you're not ready, you'll probably be exhausted by the end of it. And exhaustion can lead anyone to mistakes! So before you dedicate your attention to the SAT Math section, show an official practical SAT test to see how your Math score fits into a larger test photo. Make sure to take the whole test in one sitting; It will help you build stamina for the test day. #2: Use the right time and pace yourself as you take SAT practical tests and any math-specific sections, be sure to use the same timeline you'll have on the day of testing. The chart below shows how much time you'll have on each SAT section, and also how much time you should (approximately) spend on the question: SAT Section Total Time - Issues Time per question Reading 65 minutes 52 75 seconds Writing and language 35 minutes 44 48 seconds Mathematics No calculator 25 minutes 20 75 seconds Mathematical calculator 55 minutes 38 87 Essay seconds (optional) 50 minutes 1 50 minutes You will have about 75 seconds per question in the No Math section and 87 seconds to question in the Mathematics Calculator section. Some questions may take you less or more time, but keep practicing so that you don't constantly spend too much time on one math question. Remember that accuracy is only half the battle- you have to actually finish the questions in time if you want to get a high math score! However, don't worry if you run out of time taking your first SAT practice test. This is perfectly normal and gives you a starting point from which you can later improve. #3: Review your mistakes It's one thing to take the SAT Math test, but you also have to look at your results and identify any patterns in your right and wrong answers. Do you tend to get past a few questions wrong in every math section? Do feature questions just seem to throw you on a loop? First, find out what went wrong. Then, see how you can pick up a few simple points and diligently target these areas in your training. (Remember that every math question, regardless of its complexity, costs the same number of points!) #4: The goal is your biggest weakness Once you have identified patterns in the mistakes you make, it's time to dig deeper and explore your biggest weaknesses. Your ultimate goal will be to adapt your training so that you can focus on areas that you are struggling with most. Since your overall goal is to answer as accurately as possible to many questions, you want to devote most of your time to learning to improve your weaknesses rather than to consider considering You already know. Updating your famous material over and over again can make you feel productive and confident, but it doesn't do much to improve your score. It is best to focus on problem areas by practicing and expanding your knowledge base. #5: Set a study schedule Don't be tempted to cram right before the test. You may have a busy schedule and feel as if your only option is to cram in for the SAT, but the improvement does happen over time. Normally, we advise giving yourself at least three to six months to study on the SAT. If you don't have much time left before the day of testing, however, don't give up! No matter how much time you have to study, you can come up with a balanced plan for the SAT study. First, calculate the amount of time it takes before the test date. (For example, say you have a month before the test.) Next, assign yourself at least three complete practical tests (in addition to conventional training materials) and distribute them during your training schedule. If you only have a week or so before the day of testing, it probably won't be possible. In this case, try at least one or two practical tests where you can. Nothing else repeats the SAT experience like a full practice test does, so don't underestimate its value in your preparation! #6: Don't see any improvement? Get extra help prep Some students prefer to do all their SAT training on their own, but others work better with little guidance. If the SAT subject just doesn't make sense to you, or you need help prioritizing your time, SAT tutor or prep program (or both!) are great options to try. Both can give you that final push you need to stay focused and maximize your SAT Math score. At PrepScholar, we offer expert SAT training services in addition to a fully customizable SAT training program. For more information, read our guides on how to find the best SAT mentor for you and how much you should spend on training. Targeted and thorough practice, rest and confidence: the perfect recipe for SAT success. What's next? Don't know where to start? Take a look at our list of all the math topics in sat Math, and target your weaknesses with our individual SAT Math guides. Want to know what the most difficult SAT Maths questions are? We've compiled a list of the 13 most challenging SAT Math questions, as well as explanations for each one. A bitten procrastination error? Time and away before the day of testing? Check how to beat the desire to postpone, and learn how to balance the time to study. Want to Get the Perfect SAT Mathematics Dig in our guide to get the perfect 800 on SAT Math, written by the perfect scorer! Want to improve your SAT score by 160 points? Check out our best-in-class online SAT training program. We guarantee your money back if you don't improve your SAT score by 160 points or more. Our program is completely complete and it adjusts what you are learning to your strengths and weaknesses. If you liked this Math strategy guide, you'll love our program. Along with more detailed lessons, you'll get thousands of practical challenges organized by individual skills, so you learn most effectively. We will also give you a step-by-step program to follow, so you will never be confused about what to learn next. Check out our 5-day free trial: Are there friends who also need help preparing for the test? Share this article! Have a question about this article or other topics? Ask below and we'll answer!
