Compression Merge Capture website Create Archive Extract Conversion PNG or Portable Network format Graphic format of a graphic file that uses a loss-free compression algorithm to store raster images. It uses two-stage compression techniques. It is often used as a website image rather than print because it only supports the RGB color model. Thus, CMYK color images cannot be stored as a PNG image. CloudConvert your Swiss army knife to convert files. We support almost any audio, video, document, e-book, archive, image, spreadsheet or presentation format. There is no need to download and install any software. CloudConvert has always trusted our users and customers since 2012. No one will ever have access to your files. We make money by selling access to our API, not by selling your data. Find out more about this in our privacy policy. In addition to using open source software under the hood, we work with various software vendors to deliver the best results. Most types of conversions can be adjusted to your needs, such as quality settings and many other options. Our API allows you to customize your app. You only pay for what you actually use and there are huge discounts for high volume customers. We provide many convenient features, such as the full integration of the Amazon S3. Check out the API documentation. If you need more control over PNG compression quality, please use sketches to activate the manual mode. You are in good company: Zanzar has converted over 510 million files since the 2006 file extension .png Category Image File Description PNG pronounceable ping is a format for storing bitmapped (raster) images on computers. It was created originally to replace the GIF file format when it was announced that the companies that created the GIF format wanted royalties. PNG uses index colors and no compression losses (e.g. GIF file), but without these copyright restrictions; it cannot be animated as a GIF image. PNG Action to JPG - Conversion of the nowView file of other image file formats The technical details of PNG images are in many ways better than . GIFs because they also include an 8-bit transparency channel that allows image colors to disappear from opaque to transparent; GIFs only support fully opaque or fully transparent pixels. PNG supports a palette of 24-bit RGB colors, RGB images or greyscale or RGB images. PNG should have been able to transmit images online rather than professional graphics, and therefore did not support other color spaces (such as CMYK).
