If you've just purchased a new InSinkErator garbage, you'll be glad to know that our garbage disposals are the easiest to install. InSinkErator shows you how to install a new garbage takeout by following the steps outlined in the guide instructions and as shown in this 4-minute video. Before you try to install garbage disposal, read and understand all the InSinkErator safety instructions and the installation included in the garbage removal model. Plumber Putty (.1 kg) Wire Nuts (2-size 54) Worm Clamp Gear Meal Meal Connector Kit (optional) Hammer Channel-Lock Pliers Flathead Screwdriver Phillips Screwdriver Pipe Key Following instructions for first-time garbage disposal installation. When replacing garbage disposal, click here for instructions. Large channel lock pliers or wrench work well to loosen the nuts by holding the pipes together. When both connections are free, remove the parts. You can clear the horizontal drainage pipe to rule out any possible blockage. (This is not necessary in new construction.) Using large channel lock pliers, disconnect down the drainpipe from the sink and the compound that attaches it to the trap. When both connections are free, remove the parts. (See rice 1) Unscrew the large nut that keeps the strainer in place under the sink. Remove the body strainer. Using a flat-head screwdriver, loosen 3 screws on the assembly and wash off the snap ring. Clean from the putt of the old plumbing that surrounds the edge of the drainage hole. Place a 1/2 rope putti plumbing around the drain hole in the sink. Throw a new sink flank into the drain hole and press it into place. Placing weights, such as garbage removal, on the top of the sink flank will help hold the sink flank in place while mounting it to the sink. To avoid scratching the sink or flank, place a towel between the surface of the sink and the weight. (See pic 2) From under the sink, slide fiber pads, backup flank and mounting flank over the sink flank. Keep these pieces in place. Next, slip over the mounting ring and snap the ring. Tighten the three mounting screws, alternately tightening each screw for several turns at a time, until the assembly is evenly and tightly snug to the bottom of the shell. When using the dishwasher, you will need to tap the dishwasher knockout plugin. Put the garbage remover on your side and use a screwdriver and hammer to tap it. Next, remove the free knockout plug from the inside of the garbage removal. (See pic 3) Turn over the garbage and remove the electric lid of the plate. Get the wires out. Insert the cable connector (not included) and run the electric cable through the access hole at the bottom of the garbage removal. Tighten the cable connector. Push the wires into the garbage disposal (don't displace shield) and replace the electric cover of the plate. If you have Wired block and you are looking to attach the cord, you will need a power cord kit. For instructions on how to install a power cord, click here. To remove debris from the factory cord, simply plug in the socket under the sink after completing the remaining steps. Hang the debris removal by leveling three mounting tabs with rolling ramps on the mounting ring. Keeping the garbage in place, rotate the lower ring attachments until all three tabs are locked in the assembly. Insert the unloading tube into the unloading steam, then slide the clamp over the unloading tube and fold it into the groove on the rubber tube. (See Pic 5b) Turn the debris removal so that the drainage tube is aligned with the drainage trap. If the tube is too long, cut off as much of the tube as needed. If it's too short, you can purchase an extension. If you connect garbage disposal with the dishwasher, it can be connected through an air gap. Use a hose clamp to attach the drainage hose to the dishwasher's entrance. Now that everything is set and in a position, lock the garbage removal into the shell mounting the assembly with the help of a wrench that came with the device. Insert the Silent Collar® sink Baffle into the opening sink by pressing it into the sink until it clicks into place. (See Rice 5d) Test for leaks in the sink flank, dishwasher, tail pipe and installation of the compound. Finally, turn on the electric switch to check if it works. Enjoy the new garbage disposal!
