Asked at 30-12-2013 at 16:05 Answer this question Report Abuse my bike computer had been on my bike for 2 years. Now drove about 4000 km. I'll make my computer true if I don't ride my bike, stopping ed. Now he's done nothing, a blank screen. Also, the screen seemed a little shabby. True, it was wet for days. Keep in mind, it never stays on a bike, always gently cleaned inside the house in a dry warm place. Already a 1x VV battery, now my screen indicates zeroes with a cross through it. After placing dive once in a warm place with the battery, it continues to indicate these zeroes. What else to buy a new one? Asked at 28-5-2012 at 15:21 Answer this question Abuse Report I want to put a km counter on my moped, so I have a digital counter. The problem is that I can't find something I have to fill in as a code for wheel size. Distance my wheel travels in 1 circle 160 mm. On my tape he says: 20 x 2.25Yo someone can help me with this? Asked at 1-3-2012 at 17:21 Answer this question Report Abuse Set as with a bike: multiplying the wheel (the distance from the ground to the top tire) at 3.14 (pi) gives the circumference of your wheel, the circumference you inject in centimeters on the bike computer. Apparently the diameter of your wheel is 50.95 cm... You've already measured the wheel circumference yourself, so in a bike computer you're entering 160 in wheel size.
