Check out the latest and greatest software from the best downloads of the last week. wifi2hifi (Windows/Mac and iOS)Windows/Mac and iOS: Apple AirPort Express has long been an amazing way to stream music from your ReadEr AirPort Express has long been an amazing way to stream music from your computer around the house, but if you don't have it, iOS app WiFi2HIFI lets you transmit any sound to your stereo. While you can always connect your iPod or iPhone to your home stereo and play music directly, you can't store all the music on your iPod. With WiFi2HIFI, however, you can transmit any sound from your computer to your iOS device on the same Wi-Fi network. Start faster (Firefox)Firefox 4 on Windows: One of the longest complaints among the anti-Firefox crowd is that ... More: One of the longest-running complaints among the anti-Firefox crowd is that it's slow. One Mozilla developer decided to solve some of the problem by making Firefox run twice as fast in Windows with a simple addition. Firefox 4 Release CandidateAs happens with every release, release of a candidate, or all, but the final version of Firefox 4 hit The Details Of the latest incarnation of the legendary Firefox web browser almost ready for public consumption. The Candidate's version is one step higher than the beta, but not quite ready for release. Get a sneak peak of the new Firefox by downloading RC and see what new features Firefox 4 releases in the world. Do this (iOS)IOS: If you have a problem according to to-to-do lists with deadlines in a few weeks, free app Do it... Read moreIOS: If you have trouble keeping to-do lists with deadlines after a few weeks, the free Do it (Tomorrow) app keeps you focused, allowing you to do tasks (and move them between) two days: today and tomorrow. The basic idea of Do it (Tomorrow) is to focus on the tasks you need to do right now and pushing them for tomorrow when you can't. It doesn't clutter your list with worries at the end of the week, and doesn't distract you with labels, tags, or various to-do lists- it's essentially two pieces of paper that you can move tasks between one touch of a finger. Downpour (Mac/Linux)Mac/Linux: Most BitTorrent customers work hard to capture and manage downloads. Downpour MoreMost BitTorrent customers work just fine on grabbing and managing the download. Downpour is a very customizable installation that works hand in hand with your chosen media center, automatically importing media and supporting your feed and renaming preferences. This is not a click-through app, as the simplest setup requires setting up a Python implementation. But tinkering with Downpour is enough, and his specialist will reward your investment. Google Chrome 10 Stable Voice Google, Google Chrome, and Google Instant Views all have something new. MoreWow, it seems that that Google Chrome has been released. Now version 10 has been released worldwide in a stable channel. If you were already using Google Chrome you should have gotten the update automatically. If not, download Chrome today to see if you like it - it's still my browser of choice. Minimalist Google Reader (Chrome extension)Chrome: If you find that all the extra social features of Google Reader just paste in your way... Moreif you find that all the extra social features of Google Reader just get in your way, the minimalist Google Reader will allow you to slim down the interface pretty nicely, and add a useful shortcut that opens the links in the background. Ansel Santos, a developer previously featured minimalist Gmail and his brother's minimalist Google Calendar continues to push out big Google app tweekers for Chrome, and Google Reader is no different. Did we miss anything from this week's raid? Make sure to let us know below! Every week we share a number of downloads for all platforms to help you do things. Here were the top downloads from this week. Pixelmator 3.0 is a seriously good replacement for PhotoshopOS X: Most Mac users know that Pixelmator is pretty much the best Photoshop alternative you can get. At less than \$30, you'd pay more to use Photoshop for a month. However, Pixelmator has always lacked several flagship features of Adobe's behemoth, at least until now. Aviate is a smart home screen that adapts to you (and we have invitations)Android: Aviate is an intelligent home screen replacement that is designed to show you relevant information depending on where you are or the time of day. It categorizes your apps so that they are organized, proactively shows you relevant information, so you don't have to search for it, and it looks great in the process. Adblock Plus Now is blocking Facebook's Biggest AnnoyancesAdblock Plus updated with a new feature set to hide a bunch of Facebook's biggest troubles, including cleaning up your news feed and sidebar. The best apps to manage your recipe collectionWhy you like to cook or you just love to eat, chances are you have a collection of dishes and recipes that you would like to try. Maybe you have a bunch of endured from a loved one. Either way, you probably need a better method to keep them organized in the long run than a bunch of index cards in a file folder. Here are some of the best apps for you, depending on the kind of recipe collection you have. Malwarebytes for Android kills malware, protects your TooAndroid privacy. Malwarebytes Anti-Malware is tool to remove trojans, worms and other malware from your Windows computer, but now it has made the leap to Android. It still offers robust malware protection, but it goes further to protect your privacy from applications with excessive permissions or other vulnerabilities. BBM is now available for iOS Update: Android too! OS/Android: there's a lot of a lot alternative text apps are there, but many of them are only useful if all your friends are using them too. If you have many blackBerry-using friends, you can now BBM them with a free BlackBerry messenger app for iOS. If you send more text and photo messages with your smartphone than you actually do calls, you... Read moreThe Best Address Book App for AndroidIf you're looking smarter, more organized, and just all around the best way to manage a bunch of contacts, Contacts for Android is the best option. It brings a number of features to the table that don't just give you a way to quickly connect with people, but will actually help you keep up with them. Tweet7 simplifies Twitter with iOS 7 Friendly InterfaceIOS: Good luck not finding a Twitter client for iOS 7. You have so many options, you'd think developers wouldn't have any reason to cover. Tweet7 has found a new niche, however, by making a surprisingly simple option designed for iOS 7. Ultimate Sound Control can tweak every noise of your Android Phone MakesAndroid (Rooted): The default sound control options in Android leave much to be desired, and don't let the discrete settings set up notifications, calls, media, or even choose which notification sounds to play when. Ultimate Sound Control changes all this and does what its name implies. We love Android, but rooting your phone can give you the ability to do much more than yours... Read moreDay One for Mac Updates with Maps Integration, Filters, and MoreMac: Day One is one of the most beautiful logging apps out there, and today they released an update that adds a bunch of new features, including some handy OS X Mavericks specific options such as maps. Mac/iOS: We've already mentioned that regular writing can have great mental and emotional benefits, and even read more! Tweetbot 3 Rebuilt for iOS 7 with tons of new FeaturesTweetBot, our favorite Twitter client for the iPhone, just got a major update. It adds on-the-go push notifications, sophisticated filters, support for all kinds of services and more. Disadvantage? It costs \$3 upgrade. iOS is lacking in Twitter customers, and many of them are pretty much the same. Tweetbot... More What People With Cancer Should Know: a Guide to Cancer Researchers: Get up-to-date public health information from the CDC: Get the latest research information from NIH: Whenever you decide to make a small purchase on Nintendo 3DS eShop, the device will ask you whether you want to download your chosen game right at this point or at a later time. The wording of these options may seem a bit but it's just asking if you want to start downloading at the very moment (now) or the next time you put the Nintendo 3DS in sleep mode (later). It could be more convenient even necessary, depending on what you are doing with the device at the moment. The Nintendo Download later version is convenient. On the one hand, downloading games in sleep mode is a little easier on the Nintendo 3DS battery. On the other hand, you can queue several games to download. Then you can close the 3DS and make a sandwich. Whenever you want to check the status of your download bursts, all you have to do is open the 3DS. I wonder how some things come full circle. In the early days of the Internet browsers automatically download links to files that were not web pages like images, PDF files and documents. The browsers then became so advanced that they were able to open almost any file in real time. This created a problem for the developers, however. How do I get my browser to download a file rather than open it? A bunch of hacks and workarounds have sprung up to solve this problem, but none was the true solution. That all changed with HTML5 when the download attribute was introduced. Developers can now add a special download attribute to their HTML anchor tags to tell browsers to view the link as a download rather than opening the target file. There are several different ways to use the download attribute to control how browsers handle download links. What's more, all modern browsers support the download attribute, so you shouldn't see any problems with compatibility or the need for the time to go. There are several different ways that you can handle the attribute of the boot. Each of them has its own benefit and they all run smoothly through different browsers. The easiest way to use a download attribute is to simply incorporate it into your main form in the anchor tag. You don't need to include an additional file name or any supporting information. The result is this: Download the [/href/path/to/download.pdf](/path/to/download.pdf) downloadnow! In this case, the browser will download the file in the same way as with the same name. What happens if you really want to change the name. There are many cases where you want to do this. Automatically generated file names are a good example. They usually have ridiculously long names with rows of garbage characters. This is not the experience you want for your visitors. You can standardize things with a download attribute. To provide the name of the file, set a download attribute equal to that. Eliminate file extension. The browser cannot and will not convert the file type, so there is no point in trying. Download now! Along with this comes way to get your users to download the images directly. It's not revolutionary, and you can probably piece it up it yourself, but you can use the download attribute to create a downloadable image link. Start by setting up the image as usual on your page. This, of course, will be an image that is available for download. The [estadistica descriptiva pdf download](#)
