I'm no stranger when it comes to music or music theory. I'm both a classical and jazz pianist who is very comfortable to compose - especially considering that I have the perfect pitch. However, sometimes you really just need something to give you ideas and it's perfect for that. no amount of musical training or experience in music theory can prevent writers from blocking. At the time I find myself falling back into the same chord progression or completely dry on new and interesting sounds, I can get my mind jogging within 2 minutes of using this app. It's great, even without a premium (I've been using this app for a while without it), but paying money is worth the price for adding 7 B.C. chords to all the presenters they can make for tunes. people I recommended this app to write decent music with virtually no theory training at all because it does most of the work for you. Whether I use the whole template generator gives me or adjust the chords a little to suit my own taste because of my own background in theory, this is definitely a fantastic app to have when your mind is empty, but you want to write something. So simple and INSANELY powerful. If you are looking for instant inspiration for new song ideas look no further than this app. This app was such a fun tool for my songwriting process that I literally purchased a premium after the first day. Generating ideas is so simple and the app allows the perfect amount of customization to help guide the chord generation process. The functionality of midi exports makes it easy to pass these ideas on to your preferred DAW when it is ready. Recommendation to the developer - keep adding more rhythmic ideas. There's a lot already, but the more variations, the better! You absolutely NAILED the side of music theory. I recommend this app for any songwriter looking for a fun way to start a new tune!! As I said in the title, don't expect much from this app, there are a lot of things I don't like. I really think the whole point of having to pay money to save more than 5 or 6 progressions is ridiculous, this app gives a good chord progression, but having to pay to save them very compelling stuff for me to spend my money on. And on top of that, pay to change the instrument sounds? you have to joke to me, even the garage group comes with all that Just choose the key and the instrument, then it gives you what chords in this vein, all you have to do is choose which ones you want. I'm not going to pay for more instruments other than piano, it's not worth it. I'm not going to pay for the 7th chord, it's not worth it either. And I'm definitely not going to pay for saving six progressions. Spend money on lessons instead, the actual person can teach you how to come up with better musical things than this app. Learn more.
