## Hometown cable tv guide

By Jeremiah Blanchard with all the different options available through modern electronic technology with regard to TV and accessories, cable TV is the most basic service usually offered. It is easy to get lost or trapped in technical terms associated with terms such as flat screen, trolafat, HDTV, digital cable, analog cable, TiVo and many accessories provided. Basic cable TV is still widely available in most parts of the United States and around the world. Connecting a xi press cable to the TV is a very simple process compared to other technical options offered today. Locate the cable port in your home. This wall socket will normally be near the floor with a protruding threaded connection plug, with one hole in the middle. Connect the axial cable to the cable socket. Place the cable connection on the plug and screw it in place by turning clockwise. Make sure the cable is airtight and secure. Connect the other end of the axial cable to the cable connector at the back of the TV. This connection will look just like a wall connection and can be labeled as a cable in. Screw the cable in tight and safe. Turn on the TV and browse the channels to make sure the cable connection is working properly. By Ian Schorr five different types of cables available for your TV and entertainment, each with different qualities and types of signals. Component video cables send high-definition video signals by dividing the signals into three different parts. These cables are common and cranes are found on almost all entertainment equipment. However, they do not transmit high-quality signals. These are lower-quality cables, but they transmit audio and video signal within a single cable. It is recommended that they be used only with TVs that do not have any other input options. S-Video cables are cables that produce high-quality images in great detail as they transmit color and brightness separately. The digital video interface and high-definition multimedia interface cables are capable of transmitting standard and high-definition signals. Most modern TVs and other pieces of equipment come with one of these two inputs. If you ever read about TV ratings - alert! You are now! - You've seen a lot of headlines lately about humungo ratings for AMC's haha, the Bible history series, the A&E Duck Dynasty. Yes, there's a huge turnaround going on in tv these days: a big cable core hit can do as well or better than shows on TV (that means ABC, NBC, Fox, and CW). And yes, viewers who have a cable are not aware about whether the script or reality show they like on a major network like CBS or cable channel once specialized like history. It wasn't always like that, and even though the day the business model of linear television based on advertising is blown up, Yet not yet, the tie-up moment between cable TV and network is an important step. But! There are still very few popular programs on cable TV, which you won't necessarily realize from reading media coverage. Looking into March via cable, only nine shows in total received more than 5 million viewers (excluding sports and two one-time specials, children's choice awards at Nickelodeon And Disney Wizards reunion Waverley Place, and The Return of Wizards). These nine shows are not a huge joke - although many of them may surprise you, because they almost never wrote about - namely the symbols of this new world. But that only nine shows distributed over a total of 39 hours in a full month brought more than 5 million viewers indicating that those shows are deviations. On networks, even the besieged NBC seeks to attract more than 5 million viewers for a moderate hit. If CBS #1 has a program that has received 5 million viewers, it will turn into pale, vomiting, and immediately cancel it. Some playoffs before we get to the list. First, the analysis within this story is based solely on total viewers and mass, because it is those measurements that impress television critics and chair rating analysts. Cable channels that successfully target demographic specific, sell to advertisers that seek those groups, and therefore will not reach an audience of many millions, and do something different from history and A&E and USA. For example, Pretty Little Liars, ABC Family Puzzle, is dominant in the 12-34 age group female, and the whole phenomenon, in fact, in the way its audience uses social media to discuss it. But even recently (crazy) season 3 finale attracted under 3 million viewers: very large compared to the many cable shows in this broken media world, hit the brand identification for the ABC family. After a small. Also, I chose March because the recent chatter about cable ratings turned into a cry. But there are some popular shows on cable that simply aren't on right now: TNT Rizzoli, The Islands and The Big Crimes, Sons of FX of Chaos, And Network USA Suits are very popular and currently in between seasons. The way premium channels like HBO and Showtime action is that they care about cumulative viewing of the show since they're selling subscriptions - things like HBO's Real Blood and Game of Thrones get a good live tune extra, that's nice for them, but it's not really relevant here. And so on! Here are those nine presentations that are exceptions, not rules, in the world of otherwise low-rated cables. Moving is a drain, and at the end of a long day of unloading and preparing your new home, you probably want to kick back and relax with your favorite program. That's why you'll need to set up your cable or satellite quickly after you go. If you're moving locally, this could be simply Service to your new address. Otherwise, you may need to plan in advance so you can set up as soon as possible. What's better for your new home: satellite or cable TV? We've narrowed down the six key factors you'll want to consider when shopping for your next carrier. If you're moving to a rural area, a satellite might be the only option. Rural areas are less likely to be within the cable provider's coverage area, but satellites are available anywhere, as long as the dish can face south without any obstruction (trees or tall buildings). If you don't live in a rural area, you still have other ways to narrow down your options and decide whether cable or satellite is the way to go. Bottom line: If you are in rural areas, you may not be able to get a cable. If not, use these other factors to determine what is best for you. Satellite and cable companies offer bundled packages, which means you get a lower price in general when you get tv, internet and phone service from one company. This can be a great way to save some money if you need internet and phone. Ask for special offers when you sign up as companies usually give great discounts to first-time customers. Cable companies usually allow customers to pay monthly instead of signing a contract, a bonus if you don't want to be locked in a specific monthly payment for a year or more. The price of the cable depends on the number of channels you want and ranges from US\$15-50 per month, depending on the channel package you go to. Satellite companies usually require customers to sign a one- or two-year contract for their service. This is not a big deal if you plan to use a satellite provider for a year or more, but it can be a bargain-free deal for people who don't want to be locked in specific monthly payments. Satellite packages start at about US\$50 per month, but their core packages offer more channels than basic cables. Bottom line: If you just want a minimum programming and the cheapest price, cable is your best bet. If you want to have all the channels, cables and satellites are likely to cost for itself. Not all satellite companies offer internet in all areas, so if you definitely need internet and TV options, you may be better off with cable. Check with local service providers for price details to see if anyone offers a better deal. Both cables and satellites require equipment and installation. Factor this in your decision based on equipment cost and installation restrictions. If you don't already have a cable setup cable, you may need a professional to go out and set up for you. Cable wire will arrive and insert the cable card into your TV so you can receive cable channels. For digital channels and other features, such as dialing, you'll need to get a digital adapter box, which you can rent from your cable provider or find it As \$25 at retailers like Walmart.Satellite requires a satellite dish that sits on your roof and receiver, which sits inside your home. Some companies convert the cost of satellite equipment into a monthly fee, while others charge no fees at all for equipment. You definitely need a professional installation on your satellite dish, which is usually free. Bottom line: Cable requires less equipment overall since you only need a wire and a box. The satellite requires a receiver with a dish, which sits on top of your house. Once everything is installed, though, there is no big difference between cable and satellite equipment. What type of accommodation you have can affect whether cable or satellite is a better option. Cable cable is very easy to install in any kind of home, whether you rent or buy. If you are in an apartment, your compound may have a contract with a particular cable company, which may mean a lower monthly cost for you. Ask the owner about this before signing in to your cable provider. Satellite some owners try to prevent tenants from getting installed satellites. While some simply don't like the appearance of a satellite dish, others have more valid reasons. Improper installation can lead to major problems such as water leakage problems and injuries if the dish falls or someone travels through the ropes. But according to FCC Order 98-273, landlords can only prevent tenants from installing satellite dishes in common areas (spaces shared by multiple tenants, such as a rest room). They can install satellite dishes that are 40 inches or smaller in diameter in their own residences as long as they're installed by a professional. Bottom line: Cable is easier to install than satellite, but you can install either you rent or private. Satellite dishes work only when facing the southern sky, so you may be lucky to use satellites if you are in an apartment not facing south. Fewer things are worse than having a connection out when you're in the middle of an episode of your favorite show. Both cable and satellite will come out at one point or another. Here's what you need to know. Cable cable is more likely to keep working during bad weather if the wires are underground. Old houses have above ground wires that can be vulnerable to weather-related damage. If the cable line goes down due to bad weather, construction or something else out of your control, your cable will come out. In normal cases, though, the cable is more reliable than satellites. Satellite dishes are outdoors, which means they are affected by the weather. Rain and strong winds are the enemy of the satellite dish. If your satellite dish is damaged, you'll have to wait until the repair technician can come out to fix the problem, which can leave you unhappy for several days. Bottom line: Overall, cable is more from satellites. While satellites are generally reliable, storms are likely to knock them out for longer periods of time than cable. The types of programs you want to see may be the deciding factor in choosing cable or satellite, and programming packages will affect the cost of your contract. Cable in general, cable is better to watch things like local news and prime time broadcastv programs. You can subscribe to any largely driven programming, though, if you want movies and premium sports channels. The fact that the satellite provides higher hd quality than a cable makes it a better choice for anyone with first-class TV and sound systems. In addition, satellite providers can design packages like those for sports fans who can add premium sports channels to keep up with their favorite teams throughout the year. Bottom line: If you're sticking to clarity in image and sound and want to get a full viewing experience every time, go with the satellites. If not, you can get all the channels you want from either of them. When you decide between cable and satellite channels, it all depends on what you watch, where you live and how much you want to pay. Cable is better for those who want reliability and cheaper prices. Satellite is best for those living in a rural area and sports fans.
