Select your product below Please note that the standard delivery is 3-4 weeks. Copyright © 2020 NSI International, Inc. Powered By MOJO Laser X is a brand of laser label and toy launchers owned by NSI International Inc. Laser X is marketed as the best home laser label game in the world, and this is reflected in its popularity. Laser X 88016 blasters make use of stunning lighting effects and advanced electronics to create a real-life laser arena, making participants feel like they're in a video game. Like its rivals, the firm aims to make kids active and running and provides gameplay that toddlers and adults alike could enjoy. In addition to the different blaster models, Laser X also offers a Laser X Gaming Tower that allows solo play and eight additional game modes. CHECK LAST PRICE ON AMAZON.COM Who is this product for? The LaserX Two Player Laser Gaming Set (88016) is suitable for families with children. Children as young as six may enjoy playing the game, although they may initially require some guidance. One area where the Laser X product differs from competitive products is that it wears a vest. This could be an advantage or an inconvenience depending on your preference. While some people find that wearing a vest is cumbersome, others may prefer laser label systems with vests, as they tend to be more sensitive to shock and may be accurate up to a longer range. Fortunately, the Laser X vest does not cover the entire torso, but only occupies a small area, allowing freedom of movement. We found that the Laser X 88016 really shines in large open spaces, such as in parks and large backyards. This is great you live on a property with lots of land, or if you have access to a school or community complex where you can play the multiplayer laser tag. Those who have frequently played on laser label arenas should have no trouble switching to the Laser X 88016 system. In fact, one point of sale emphasized by the president of the company is that a set of blasters and receiving vests are priced similar to the cost of playing in a laser tag arena for an entire day. In other words, you're likely to recover the cost of this investment quickly. What is included in the setEach comes with two laser blasters and two receiver vests. Blasters require three AAA batteries each, or six for a set of two blasters. Batteries are not included in the assembly. OverviewThe laser laserX game for two players (88016) offers two multiplayer game modes: a red team against a blue team, or free for all modes. You can choose this equipment configuration on your vest, which also shows you your remaining lives in an indicator. Laser label launchers do not use visible lasers, but infrared beams that are safe for consumer use. The blasters are powered by 3 AAA batteries each, and you can use rechargeable or non-rechargeable batteries without mixing them. A unique point about this set of laser label games is that it comes with an interactive voice trainer. All you need to do is connect the headphones, and you will be able to listen to tips and be guided throughout the game. A feedback mechanism explains your mistakes so you can improve your tactics. The lighting effects of the game are impressive: watch the blasters and vests light up in various colors each time they are hit, or immediately after you've scored a hit! The LaserX Two Player Laser Gaming Set (88016) features a range of 200 feet (61 meters), meaning you could easily play outdoors and still experience high accuracy. It's interchangeable with other Laser X sets, so if you've purchased other Laser X blaster models, rest a lot of confidence that you could all play together in the same game. Each turn, you'll get 8 lives and 10 shots, before you need to reload. We were also impressed by the fast-fire mode, where you could fire 25 shots in a short burst. One aspect that we think Laser X could improve is in its volume control. The speakers appear permanently fixed at a high volume and cannot be turned off or adjusted. In addition, we find some cases of weapons and vests that do not synchronised. However, this can be a minor problem considering that the product has a very affordable price. We also like that some Laser X sets offer an add-on to improve the game - the Laser X Gaming Tower. This gives you 8 additional game modes and also allows you to play solo, providing an easy way to train your skills. Setup and installation processThe Laser X vest and blaster system is easy to set up. First, use a Phillips screwdriver to unscrew the battery compartment cover. Then insert three AAA batteries into each blaster. Cover the battery compartment with the cover and secure it again with the screw. The receiver vest does not require batteries to operate. To wear the vest, wear it as wearing a shirt. Your Laser X game is now installed and ready for the first game. One more step you could take to improve the game is create obstacles. You can use anything from cardboard boxes to plastic chairs and old furniture when outdoors. It's time to get creative! Alternatives An alternative to the 88016 Laser X is the Nerf Lazer Phoenix LTX. Like the Laser X, the Nerf launcher also features realistic sound effects and records shocks with loud sounds, vibrations and lights. However, the Nerf version has a choice of 10 or 25 lives, so you could indirectly decide how long you want the game to last. The Nerf Lazer Phoenix LTX has finished the need for refills and even provides a strong recoil every time you pull the trigger. A shield button gives you a few seconds of invisibility in each round. One disadvantage is that the Nerf launcher consumes a lot of power and requires 6 AA batteries. We suggest using rechargeable batteries and always have spare parts on hand so you can keep playing even when a blaster runs out of battery. There are some concerns about the accuracy of the launcher, and its brown packaging does not look visually appealing as a gift. Regardless, those who want a vestless laser tag launcher should consider the Nerf Lazer Phoenix LTX as it is suitable for both indoor and outdoor gaming, and offers versatile gaming options. ConclusionAs a laser label system that includes vests, we are pleased to see that Laser X designs the product with freedom of movement and fun play in mind. With an impressive range of 61 feet, the LaserX Two Player Laser Gaming Set is very suitable for outdoor play, while still being a good choice for indoor play. We really like the voice coach, who provides tips and guides throughout the game. The lighting effects of blasters and vests are also stunning and colorful, and will make you easily think you're in a laser arena. We just wish the company had included volume controls or the ability to turn off the speakers, as it could become quite strong at times. However, this laser label set can be used interchangeably with other Laser X blasters. You can also improve the game by purchasing the Gaming Tower add-on, which unlocks 8 additional game modes. Overall, the LaserX Two Player Laser Gaming Set (88016) is an exceptional choice for family fun. Everyone who tries would be sure to have a pleasant experience. LaserX Double Blasters with Gaming Tower Take part in a futuristic real-life laser battle game experience. Play the latest high-tech game of... Includes 2 blasters, 2 receiver vests and a game tower. Play as a team or onlyBlasters have full color lighting effects and sound effects. 200' Range! How to fix X doesn't work? While many users have a great experience with their Laser X guns, there may be times when you encounter trouble operating them. If the Laser X launcher does not turn on when you press the switch, your first action should be to check if the batteries are in place If they are not inserted in the correct order or address, they will not work. Another possibility is that one of the three AAA batteries is dead. Replace all batteries to see if it works. If the blaster still does not turn on, the power switch may have failed. When you turn on the power switch, see if the blaster makes a sound and the lights turn on. If the blaster does not respond, the switch will most likely need to be replaced. If your Laser X 88016 blaster does not fire, your trigger may be stuck. Check for objects stuck inside the trigger, which would prevent it from being fully pressed. Another problem is when the trigger is damaged. Ideally, the trigger will move half an inch when pressed. It also has a spring that gives it a little resistance. If the spring or trigger is broken, the blaster will not fire. Try to pull the trigger a few consecutive times, and if it doesn't move, you'll need to replace it. If the Laser X launcher cannot reload it, try restarting it by pointing the weapon to the ground. Take the front of the blaster and touch lightly against a hard surface. Do this once while pulling the trigger, and once without. Repeat this process 3 times. Now, you can try pressing and holding the trigger for 3 seconds, followed by shaking the blaster for another 3 seconds. If the blaster does not detect laser shots from opponents, the infrared sensor may be faulty or disconnected. Faulty infrared sensors must be replaced, while disconnected sensors may have faulty wiring. Sometimes you may not receive sounds or receive distorted noise from the headphone jack. The first problem you should check is if the headset is working normally. Connect the headset to another device, such as a computer. Try them with an audio track, and if there is no sound or if the sound is strange, you should buy a new set of headphones. Another possibility is that the headphone jack is loose. Open your Laser X blaster and put it back in place. If there is still no audio after adjusting the position of the headphone jack, it will need to be replaced. If your blaster doesn't produce any sound, it could be that the batteries have run out. Try inserting new batteries to see if they work. If there is no sound yet, check if the speakers are disconnected. The cable that connects the speakers to the circuit board may be broken. In this case, you may need to weld the wiring back together. In case you are not able to resolve the issue on your own, you should contact Laser X Customer Service at custserv@nsi-int.com or 1-888-425-9113. The company offers a 30-day money-back guarantee on its products, less processing. You may receive a Return Merchandise Authorization Number. Then you could switch to a new blaster at the store where you bought it. Laser XEI XEI instruction manual X Gaming Tower is an add-on that will greatly improve the game. The prerequisite is to have at least one blaster and Laser X vest. In addition to 8 additional game modes, you can also play alone as the tower will shoot lasers at you. The Laser X tower comes in a simple packaging. Once you remove it from the box, you will see the tower and an instruction manual. The tower is one foot or 30 cm tall. Unfold the legs of the tower to let it stand. Adjust your legs until the tower reaches the players' chest level. Choose a place where the tower does not collapse, and try to avoid placing it in direct sunlight, as it can affect accuracy. You can also place the tower on a table and keep your legs flat. The tower is powered by 3 AA batteries. Insert the batteries into the compartment at the bottom of the tower. Please note that you would have to buy your own batteries. At the top of the tower, you can see a clear red dome with infrared sensors inside. This dome is also a power button; press on it to turn the tower on or off. Slightly below the red dome, there is a speaker and also two laser pointers that can bring you back fire. The large Laser X logo on the front of the tower lights up in blue, purple and red colors alternating during a game. On the reverse side of the logo, there are two digital screens where you can select the game mode and view the score. After turning on the tower, you have one minute to choose a game mode. Use a Laser X gun on blue or red equipment to shoot at the tower. You'll see the digital display increase from 1 to 10 with each shot, indicating the game mode. After reaching the intended mode, press the red dome to start the game. Breakdown of game modesModes 1-8 are considered regular game modes for the laser tag alone or multiplayer. These games are all about shooting specific colors and become more difficult each round. Modes 9 and 10 are the bonus modes for multiplayer games. In mode 9, when shooting at the tower, repeat your team's laser beam up to 100 feet (30 meters). Try using it to shoot around corners, or hit many opponents at the same time! In mode 10, teams compete for points by shooting at the tower when showing purple lights. The first team to reach 10 points wins, but beware that your opponents could still shoot you while you're focused on blowing up the tower! Baseline If you already have the Laser X launcher but not the game tower, consider getting one to add to the challenge. We firmly believe that everyone will enjoy playing bonus game modes!
