My Remstar Pro w/CFlex started giving me the error code, the E-24. So I got an Rx from my doctor to repair or replace my CPAP. Well my insurance won't pay for repairs, or replace it. The best I could do was they would pay the rent to buy, but I have a \$500 deductible, and the new car is about \$600. So I'd pay almost all of it! So I did a Google search for Remstar Pro E-24 error code And came to this forum.... No014fbf557f7ee365f1a9bdc249e84fb1Gde message states ... The error of the E-24 on REMstar Plus w/C-Flex is: Problem: Flow of Corrective Action Displacement: Check for leaks or kink of internal pipes. Replace the chief PCA. Looks like you need to take/send it to the DME/place where you bought it. So I took my car apart to look inside. I found a hose that had to be connected to a plastic nipple that broke. A few drops of super glue and walla! Now, I still had this error code showing up. So I find at E-Bay people selling Clinic Guides for about \$5 each. ( The ads state that they are a Home Care Service Provider Setting Instructions Guide AND This is a guide that allows you to enter a therapy setting menu to change and install pressure, set up C Flex, alarms, display lights, height settings and all other features. I emailed the seller and asked how many pages of the manual and if you needed any other equipment to access settings changes such as prescribed pressure? The answer was that no other equipment was required; The guide tells you how to access the menu to change all settings. And that's eight pages. So I start searching the internet to find guides or instructions on how to do it. It didn't take long before I found the actual Respironics TECHNICIANS SERVICE SERVICE!!!! 157 pages!! This thing tells you how to tear the machine apart and completely replace any component! Along with how to access therapy set up menus and change all settings!!!! Page 34 even states that patients do not forge with settings, referrals to enter the therapy menu should not be identified for the patient. It also lists all ERROR CODES and even has wiring schemes for everything including a circuit board. Now, I have a REMstar Pro with CFLEX that this guide should be for, but mine is a little different from the one in the manual. (my old model?) But it was close enough that I could figure out what I needed by trying similar things at the mine. So I thought I would try to get the word out online as something that this guide was FREE on the Internet (from the Respironics website). NOW IN NO CASE DO I CONDONE ANYONE'S ACCESS TO THE MENU TO CHANGE THEIR SETTINGS WITHOUT ONE GETTING THEIR DOCTORS TO DO I wanted people to be aware of the resource to help with repairs if they can be in a situation where insurance does not help. And repairing any medical equipment is never cheap. In my case I would've had my DME dealer ship my car to the repair center (\$60 I had to pay) just to find out what happened (\$ labor?) to find out how much it would cost to fix it. It's out of pocket. OR get a new car, and since I have a \$500 deductible, pay the first 6 months of rent \$92 a month. (I only pay \$163 a month for my truck payment!) Then the insurance will pay 80% of the remainder before buying (rent buy) according to my DME dealer. So I saved myself a lot of money with just a little research online. Now I pass this information on! The guide is on the Respironics website .... but not the main website. It took a few searches to find him. It can be found in... REMstar Pro SERVICE MANUAL (157 pages) PDF 20manuals/Remstar%20Pro/Remstar%20Pro.pdf.My has 5 buttons on it. Directly below the display are the zlt; and the user's (so-called buttons). And at the bottom right is the START/STOP button. (Lcd Display) HEAT 'gt;RAMPStart/StopNow, I was able to completely RESET my car by disabling the power cord on the back of the machine, then holding the HEAT, RAMP and START/STOP button when plugging it back in. Which dumped my car on factory settings. (Pressure Therapy was 20 cm/H2O) Then I turned it off again re-connected it when pressed on 2 user buttons (and qgt;) while you hear 2 beeps. This got me into my therapy installation menu where I could change my prescribed pressure back to 12cm/H2O. Now my machine is working perfectly again. (I also found another menu by disabling it/plugging it back in and holding the HEAT and RAMP buttons. But I'm not quite sure what those settings do. Error phenomenon: After hanging it, no hanging or an image of Who has it, please log in. I thank you in advance for your answers. Hello, prociSiasztok! My question would be that. There's a PASEL-type inver room that controls the backlight in the LCD display. The backlight didn't work, so I completely unneeded it and tried to figure out its flaw. When the inverter is turned off, the necessary form of signal appears. Lcd has a light sheet marked A-K. Unfortunately, it shows diodes in both directions... The thing is, I can't put it all together. Is it possible to replace these sheets with backlights in a cultural way? My other question is how can six people die in a particular device at the same time... Hi: Christian DSC5010-alarm-center-PC1555RK-HELP!!! Hey, I'm sorry. I would like to seek help on a disturbing topic. In our apartment I replaced the old-fashioned alarm panel operators (PC5508) with PC1555RK in the hope of expansion. I wanted to expand the operator's number and zone number. I was able to amplate the PC1555RK (8 xxxxx 902 and 903) by incorporating system monitoring, and I also nom myself into Operator 1 and 2. However, the operator's control zones are not visible on pc5010. I installed zones 1 and 2 for free, I couldn't identify the area in the operators anymore, because the beep handler is long program code 020, it doesn't allow the definition of the zone. Help me, help me! siposb 1 2 Table Contents 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 22 222 23 24 25 26 27 28 2 2 2 3 4 5 6 7 8 9 11 12 13 14 15 16 17 1 8 19 20 21 22 23 24 25 26 27 Page 2 1 2 3 4 5 6 8 9 10 11 12 13 1 1 1 1 4 15 16 17 18 19 20 21 22 23 24 25 26 27 My Remstar Pro w/ CFlex started giving me the error code, E-24.
