Electronics Repair Guide ist Bei Facebook. Um dich mit Electronics Repair guide zu verbinden, trit Facebook noch heute bei. Panasonic, formerly called Matsushita Electric, originated in 1918 as a company that specialized in selling duplex lamp sockets. The company continued to produce other electrical components during World War II, including bicycle lamps, engines, electric irons, vacuum tubes and lamps. The company has a long way to go since the 1940s. Today, Panasonic is headquartered in Japan and offers a wide range of electronic devices around the world. These devices include air conditioning, SD memory cards, video intercoms, projectors, scanners, phones, tablets, etc. Panasonic offers a wide range of services including fire alarm systems, business communications systems, security systems and more. Among the electronics that Panasonic has released TVs. However, Panasonic TVs are mostly no longer sold in U.S. markets. It's still possible to come across them from time to time, especially refurbished ones, but Panasonic TVs aren't as prominent in the American television industry as they once were. This is due to a combination of increased competition and declining sales that ultimately lead Panasonic to focus its efforts on other consumer electronics. Panasonic TVs are large, rectangular displays. They are relatively thin and usually black. They have the Panasonic logo somewhere on the device, usually in the front center, just below the screen itself. Panasonic TVs are designed to sit on a television booth or entertainment center or attach to a wall mount. Panasonic Viera is the company's product line with flat screen and TV panel. According to Panasonic's support website, the name Viera comes from the visual era. Panasonic was founded in 1918 by Konosuke Matsushita and started out as a company selling lamp sockets. In 1979, Panasonic began producing televisions for the U.S. market and eventually expanded to the European market. Along with LCD TVs, Panasonic has become one of the leading brands of plasma TVs. Despite the fact that Panasonic is the dominant and high-quality TV manufacturer, in 2016 it quietly moved out of the American television market. Panasonic has directed much of its efforts to increase the plasma TV market, but due to the growth of technology and preferences for LCD TVs, Panasonic stopped and stopped producing plasma TVs in 2014. Panasonic also plans to discontinue production of LCD TVs by the end of 2021. Currently, Panasonic still sells various television models on its website. Users reported that some Brick and mortar/wholesale retailers like Best Buy and Costco can still carry Panasonic TVs. Product page and Panasonic support to discontinue LCD production by 2021 Why Panasonic leaving the TV market Panasonic Viera Products Page Dear Dear Technicians, my name is Damon Morrow, and I am a professional electronics engineer technician who specializes in LED/LCD/Plasma TV repair and services along with other modern electronics equipment.
