CPC-H covers hospital coding. If you want to work in a pay environment, such as health care providers, you typically apply for CPC-P certification. In all cases, you must take the AAPC exam as part of the certification process. Even if you have coding experience, you are more likely to pass the exam if you prepare for it. You may have covered them already in a coding program or another course at school. If not, you can take courses in anatomy and medical terminology with AAPC or other providers. Also, if you just need to update your knowledge, the AAPC website has a useful medical coding glossary. Some states also hold one-day survey sessions. AAPC releases formal training guides for all three CPC exams to help you review your existing knowledge and prepare for the exam. Each guide goes through sections in their exams, giving you an overview of questions, test tips, examples and test questions. You can also access the official online practice exams if you wish. There are three packs of 50 questions available for PDA and PDA-H, and one pack of 50 for CPC-P. These questions work exactly in the same direction as those you answer in exams. Coding books will help you translate health procedures into billed codes. You can use certain books in exams to answer questions where you need to find codes or information. You can manage the exam more effectively if you know how to use the books before taking the test. AAPC recommends that you read these books so you can find codes, tables, instructions and guidelines quickly when answering questions. As of February 2014, you can take the AMA standard or professional book, the HCPCS Grade II book and the ICD-P-CM book. Make sure to check exam rules for books that you can't take on the exam.
