In addition, it can bypass the screen password for locked, disabled or broken screen devices without any hassle. Here's a video guide to bypassing Samsung FRP's Lock with iMyFone LockWiper (Android) How to access your Google account if you can't remember your username and password? If you've reset your Android device and can't access it because of a forgotten Google username or password, you can do one of them: Situation 1: Know the username, but don't remember the password. If you know the username of your Google account but don't remember the password, then you can reset the password on your device, or www.google.com. It can take up to 24 hours for a new password to be synchronized with all devices registered in this Google account. After 24 hours you can try to log into your phone with a new password. Situation 2: With multiple Google accounts. If you have multiple Google accounts and you don't know what Kind of Google account you used on your device, then visit with your Google username and password and check the list of all devices registered to that particular account. If you haven't found the device listed in your account, the record, The device is registered to another account. Use the same method to check devices related to other Google Accounts. Situation 3: Use the Apex Launcher. Various Samsung app to bypass Google to check the APK will help you disable the FRP lock and allow you to access your mobile phone. This can be an effective method to unlock Google verification completely from your Android device. There may be some time when this app can help you get out of a problem situation and help you skip this step after dumping the plant. But not all of them work for your device. Here are the steps to use APK to bypass FRP: Restart your device and connect it to a work-based Wi-Fi network. Click on and then agree to terms to continue the process. Once you have reached the google verification step, make a call from any other mobile phone. A pop-up notification will appear on your mobile phone screen, click save. Move up to three points on the top side, click to send a message, enter YouTube.com and make it a hyperlink. Click on the message it will open an internet browser. Now click on the account's account and install it. Open the app, you go to the home screen. Open the settings and turn on the developer mode. Open the browser on the same page from where you downloaded the app and go to the Google account manager. Download and install that and click done. Now download FRP Bypass apk 2019 and click to install on your mobile phone. Open the app and click on the three points, click OK. Now you can create a new account here and start your device. Cons of this method: It only supports a few device models. The procedure is actually complicated and long if you know little about phone technology. There is no guarantee that you will be successful in this process.
