They listen to consumers, building on what works and what could be improved. Pulsar has just released a new version of the popular APX Herb Vaporizer, which has been renamed the APX Vape. This update includes faster heating time, more accurate temperature control, and, best of all, an LED screen that displays temperature and battery life. However, Pulsar doesn't remove the attachment from the concentrates, but perhaps it just left more room to improve dry herbal functions. Little both in size and cost, we wonder how Pulsar's APX 2 Vape's new updates will vamp up the rankings among similar vaporizers like the Utillian 420. Even if this is your first vaporizer be sure to check out the Vaporizer Buyers Guide. If you're on a budget and looking for the best evaporator for the price, check out the list of what we think are the best budget vaporizers on the market today, a great way to start your vaporizer journey. Review: Pulsar APX 2 Vape Dry Herbal Vaporizer A great thing about the Pulsar APX 2 Vape is how easy it is to use. It has a simple build with minimal components, making it a great vaporizer for first-time users or for those with low tech devices. To pack the vape, first remove the ergonomically enhanced mouth toe. Fill the flower in the pantry, taking care not to wrap too tightly and replace the mouth toss. To turn on the evaporator, press the power button five times. To switch between the 5 temperature settings, hold down the button for 3 seconds to start cycling and release the setting on the LED screen. To press the pen, hold down the power button and inhale through the mouth tip. You can also change the temperature settings while vaping, which is a great feature when searching for the desired temperature. Again, we appreciate the wide range of temperature options. Having preset temps can save us time as we don't have to go through so many options to find sweet spots. However, the fact that you had to circle the temperature by holding down the button rather than maneuver them into a simple press took a while to get used to. It's frustrating to spoil, skip the desired temperature and have to wait for the LEDs to cycle over again. For what it's worth, the Pulsar APX 2 has an average hat quality. But let's face it: if you're looking to see some clouds, I suggest you go for something more like Utillian We didn't expect anything crazy from the vaporizer considering how much we paid, but we were still happy with the clean taste it made. The APX Vape features what Pulsar calls an improved silicone cooling system although steam doesn't have much time to cool down at all. Unlike Firefly 2+, which places the herb chamber at the other end of the evaporator on the mouth tox, the APX Dry Herb vaporizer is packed right under the mouth tox. This results in hits that are sometimes too hot, but we found that this can be easily recorded only by placing the temperature of the lowest setting. silicone-lined nozzle will also be really sticky very fast, which affects the taste of steam as you inhale. It's also quite tricky to clean, leading to a big downfall in the evaporator's performance. APX has provided many improvements to manufacturing quality, and while we're not crazy about the purity of the silicone-lined nozzle, it beats the original stainless screen. The new shape looks more natural in the mouth, and the design improves airflow, resulting in better results. We love the new LED screen user interface. Being able to read the temperature on the screen beats the first version of LED lamps, which indicated temperature marked on the back of the evaporator. Although temperature selection is still irritating at first, it is also easier (and definitely more readable). As mentioned above, we strongly believe Pulsar listened to customer reviews when redesigning the APX Dry Herb evaporator. It's still just a button that's a fan-favorite for ease of use, but the button is now rubber instead of metal. It's a small change, but a simple one that gives you a better feel and a more confident user, as it's easier to hear the button. The evaporator also comes in 9 different colors, ranging from black rainbow to tie-dye, so be sure to style that you like on the market. Users usually tend to prefer the Zeus Arc for its exceptional manufacturing quality featuring a gold plated steam path. Pulsar really hasn't changed anything about the battery, sticking to the standard 1600 mAh lithium battery. The charging time is about 90 minutes, which is also about the length of battery life. But considering that the pen is only 4 ins tall, it's not a bad usage time. However, if you are on the market for something that lasts all day, we recommend checking out the ZEUS Smitte. This device can offer up to twice the battery of the APX Vape. One of the most attractive features of the APX Vape is how portable it is, like the Davinci Miqro. It's only six inches, just a little bigger than your normal lighter. It's easy to take with you almost every time, and a wide range of colors allows you to show off some of your personalities in the evaporator. We think the price makes this even more portable vaporizer – don't be afraid of dropping or losing so much because it wasn't such a big investment. Either way, you can use zeus armor to avoid loss at all. Easy to use There's a button on the side, an LED screen that displays two icons of different colors (temperature and battery level), and a mouth toe on top. In the world of technologically advanced vaporizers, the Pulsar APX 2 Vape really won't be much easier than this. There was a problem cleaning the silicone-lined nozzle, but we appreciate that the Pulsar includes a cleaning tool and an extra nozzle. The chamber is made of ceramics similar to Focus V Pro, which is easy to maintain. Overall, we think it's a great vaporizer for first-time users because of its simplicity. Fits in the palm of your hand, it's hard not to be discreet with the APX Vape. Unlike some vaporizers like Arizer Solo 2, it fits anywhere, it can easily carry around, and if you regularly clean it, smell won't stick to it. We recommend vaping at low temperatures to avoid more punting mist clouds, though. Pulsar has definitely put a lot of effort into the manufacturing and usage quality of their APX Vape, including more ergonomic features, a more accurate heating system, a LED display screen, and a silicon-lined mouthpiece. While we no longer provide the concentrate attachment (you can also buy separately!), we feel this has left the company more room to focus on improving the characteristics of the dry herbal vaporizer. The updates are vaporizer sweet and noticeable, but not worth it for users who already own original APX. And first-time buyers are advised to check out the Utillian 420 as well, offering a coveted glass nozzle for optimal flavor.
