You can find this item, Hollywood Universal Bed Frame, in Costco usually when there are mattresses in the store. This is a one-bed frame that can be adjusted and used for all bed sizes - twin, full, queen, king and feces king. It has some impressive features including: - Easy to assemble and no tools, nuts or bolts required! - Tri-Piece Assembly System - Lion-R-Lock Lock Device - oversized 4-slot head brackets - heavy steel debt designs with central support - Extra wide carpet rollers - Extra Glides available - Made in the US Hollywood Universal Bed Frame for just \$37.99. Paragraph 593297. Inventory and prices in your store may/will vary. Videos with products available on Costco.com. Place a large metal frame on the floor. The three metal clasps to the top of the metal frame will be scrackled. Move the metal frame to the wall. Make sure the frame is on the level. Adjust the levelers on the bottom of the frame if necessary. Using a pencil, draw the outline of three metal clasps. Remove the metal frame and place the clasps in the pencil contour. Draw the pilot holes inside the clasp. Drill holes through drywall using pilot holes as a guide. You drill two holes for each clasp - a total of six. The butterfly's route switches through the clasps, as shown. Then use a screwdriver to firmly attach six butterflies switches to the wall. Finally, move the base metal frame back into position, and tighten with thumbscrews. Now, your frame is firmly in place and ready to take your bed. Throw the bottom end of the bed frame with a spring slat in the slot provided. Tighten with the help of down Allen key and bolt provided. Insert a double rotary bolt adapter into two holes, as shown. Put the pucks in place. Attach the bottom end of the pistons to the metal frame. Move the metal frame back and forth to line the pistons with a metal frame. Make sure the pistons are firmly fixed. Protect the pistons with a wrench. Slide the bottom panel into place with the men's/female connectors. Safe from the back with your thumbs. Carefully lower the other half of the bed on the first half - making sure to push all the way down. Safe with thumbs up. The front panels simply descended into a metal vessel. Make sure to line up a man/woman and attach the panels to a metal frame. Now lower the bed into a position down. Protect the panels to the frame with your thumbs. Now your front panels are in place. Place the mattress on the bed for safety reasons. Use the straps to protect the mattress. Two side parts are attached to a metal bed using male/female Make sure the metal parts that are in the side panels are lined properly to fit the metal receptors of the back. Gently attach the back panel while standing on a chair or chairs, and move the plastic plastic closed. After sticking the crown moldings to the top panel, lower it on the side panels as shown after ensuring that the metal pieces are lined up properly. Lock in place with switches. Attach the front casting and secure with switches. Using a stud, find the studs above the bed wall. Place the L bracket against the stud, as shown in the shown. Attach the L bracket to the stud using longer screws. Attach the L bracket to the top of the wall bed using short screws. Now, your Techcraft wall is completely assembled. Just let go of your legs, and move into a closed position. The universal Broadmoore storage bed is available in the sizes of the queen and Cal King. We didn't see the size of the king in the store. Both sizes have the same features: - built of poplar solids with mahogany and birch veneers - a sleigh headboard with decorative framed panels - storage of footrests with 2 boxes depicting English pigeon tail construction and cedar lining Bottoms - Premium balloon box slips - bolt-on-side rail construction with stainless steel assembly equipment - deck boards included for use only with mattress : 96 L x 64.8 W x 58 H Dimensions Cal King bed : 100 L x 76.8 W x 60 H Item Number 1074751. The versatile Broadmoore Cal King storage bed is priced at \$699.99. Point no 1074753. The inventory and prices in your store will vary and may be changing at any time. 1 Set the legs frame in front of each other. Most metal bed frames consist of two main segments, left foot and right foot. Place these feet in front of each other, leaving enough space in the center for the mattress itself. 2 Attach your legs or wheels to each of the legs of the frame. Look for short beams extending from each of the metal legs. If you are collecting a stationary bed frame, connect the included plastic or rubber legs to the leg. If you're collecting a mobile bed frame, plug in the roller wheels. For most bed frames, they should attach without any special equipment, although some models may require you to provide them with a screw and nut. 3 Stretch the side arms out of the leg frame. For the convenience of packing and assembling, most metal bed frames house their side hands inside the metal legs themselves. So you just need to pull your hands out of your legs and make sure they are completely extended. If the legs do not contain already attached side hands, you may need to attach your hands separately with screws and nuts. 4 Locking the side hands together. Look for small holes and protruding nubs on the side hands and, if any, just plug the side hands together by pressing the nubs though the holes. If your side hands have only holes, it is possible Combine them together with screws and nuts or included metal plates. If you are collecting an adjustable bed frame, use holes that match the appropriate the size of a mattress. 5 Attach a central support beam if necessary. Some metal bed frames, especially those that connect the side hands together with a metal plate, come with the central support leg. Make sure you plug any necessary wheels or feet to your foot and then lay it through the center of the bed frame. If your side arms or legs have grooves in the center, slide the ends of the central leg into them. Otherwise, attach them with screws and nuts. Place protective caps on the edge of the bed frame if necessary. If your bed frame leaves small, open pieces of metal at the corners, cover them with included protective caps. If your bed frame doesn't come with lids but is exposed to metal, cover it with a few layers of duct tape. Covering these stains will keep your skin from scraping if you come across a bed frame. 7 If you want, plug in the headboard or gravy. Some metal bed frames come with headboards or hanging boards. If you have, make sure the board is completely extended and, if necessary, attach any included feet to it with screws and nuts. For some metal frames, you can simply slide the boards' feet into slots on the main frame of the bed. For others, you need to line your feet with holes on the bed frame and attach them using screws and nuts. 1 Place the headboard against the wall. For a simpler build, place the headboard (higher wooden frame) against the back wall or other sturdy surface. If possible, place it against the wall where it will sit when it is over, as moving the assembled bed frame is not an easy task. Make sure the finished side of the frame indicates, as this is the side that everyone will see. Some headboards can stand or lean on their own. If you can't, grab another person to keep it in place. 2 Attach the side rails to the headboard. Find small holes or grooves at the base of the headboard. On the left and right side should be the same number. Attach one of the side rails of your bed frame to each side of the headboard, making sure that the finished side of each rail indicates. Some side rails will simply fall into place, although others may be provided with screws and nuts on. If you need to secure the side rails with screws, look for a small hole near the end of each rail. Insert the screw from behind the headboard into each hole and wrap them with nuts. If you need to connect the side rails to the screws, press the screw in the designated area on each side of the headboard and then attach the side rail to it. If you need to secure your side rails with metal braces, screw the bracket at each end of the headboard and then screw the braces of their respective side rail. 3 Connect the base to the side rails. For most wooden bed frames, you can attach the pendant using exactly the same method as the headboard. However, since your base board is shorter than the headboard, the headboard, grooves or holes may look a little different, and any screws or nuts needed to ensure the base board may be smaller. Make sure that the unfinished side of your frame indicates inches Some side rails have small panels, holes or ridges in them designed for he-center supports. If your bed frame doesn't have these, you may need to attach the included guide using screws and nuts. Look for markings along the side rails showing recommended drilling spots, then drill a hole in the forest and attach your auxiliary guides. If the side rails are not marked, calculate how many guide supports you have and attach them to the bed frame at equal distances. 5 If necessary, add the supporting legs to the central boards or beams. If your central boards or beams come with support legs, be sure to attach them before connecting the central support to the rest of the frame. For some bed frames, this involves simply screwing your foot into a board or beam by hand. For others, you may need to drill a hole in the support and attach your leg using a nut. 6 Connect the central boards or beams to the side rails. If your bed frame comes with wooden or metal support beams, put them across the frame at equal distances. If you have wooden support panels instead, put them on top of the frame. If necessary, cover the supports with screws and nuts or slide them into locking grooves or holes. If your bed frame comes with both central support beams and panels, secure your beams and then lay the panels on top. 7 Check the frame by measuring the level and tape. Before placing the mattress on top, place the level on the side rails and central supports to make sure the bed frame is not sloping. If you have purchased an adjustable frame, use roulette to make sure it is the right size for your mattress. Ask a question Thank you!
