- TS-XW RACER: V4 firmware - TS-PC RACER: V9 firmware (for base) - T-GT racing wheel: V5 firmware (for base) - V32 (for wheel) - T300-series racing wheels: V29 firmware - TX Racing Wheel: Firmware V54Sub changes. Made in these new firmware:- Automatic calibration improvement- Added support tm Sim HubYour version of the firmware wheel appears in the top right of the control panel tab- Thrustmaster T-GT Racing Wheel: V5 (for base) - V32 (for the rim) - TS-XW Racer (USB): V4- TS-PC Racer: V9 - Thrustmaster T500 RS Racing Wheel: V47- Thrustmaster T300 RS Racing Wheel: V29- Thrustmaster T150 Racing Wheel: V5 - Thrustmaster TX Racing Wheel: V54- Thrustmaster TMX Racing Wheel: V7- ThrustmasterTM Sim Hub: V1.12 (Basic) - 1.07 (CoMCU) - Thrustmaster BT LED display: V1.17 (Basic) - 1.18 (Bluetooth) BEFORE being asked to do so.- NOT CLICK in any Windows-specific glass panel that may appear during the upgrade process.- RESTART COMPUTER after the package is installed completed. Installation:1 - Double tap the installation file (2018\_TTRS\_3.exe) to start installing.2 - Follow the instructions displayed on screen.3 - When done, select- Start/All Apps/Thrustmaster/Control Panel. (Windows 10/ 8.1 /8) - Start/All programs/Thrustmaster/FFB Racing Wheel/Control Panel. (Windows 7/ Vista) - The racing wheel appears on the screen showing the status of OK4 - In the control panel, click Properties to customize your race wheel:- Test Entry; Lets check the buttons, D-Pad, wheel, pedals and adjust the angle of the wheel.- Force test: Lets check 12 power effects.- Settings Gain: Allows you to adjust the power of feedback.5 - Click on the 6- Notes on the FERRARI F1 racing wheel:- On the PC, The Ferrari F1 racing wheel is recognized and appears on a screen called Thrustmaster T-GT Racing Wheel or TS-XW RACER (USB) or TS-PC RACER or Thrustmaster T500 RS Racing Wheel, Wheel Thrustmaster TX Racing, or Thrustmaster T300 RS Racing.- This is Normal Mode, offering 13 action buttons and D-Pad (in this mode. In this mode, 2 rotary coders are 4 main directions of the D-Pad. Therefore, they can be used to change the settings of the car (engines, tires, pouring, etc.). To use them, if necessary, access your game's control options and change them as needed.- On PC (only), the race wheel can be configured in Advanced mode to offer 25 action buttons No. 1 D-Pad (in this mode, 2 rotary coders, 2 D-Pads, 4 shifts and 4 L3/R3 buttons are customized). To do this, select Advanced Mode in the control panel. appears on a screen called Ferrari F1 Wheel Advanced T-GT or Ferrari F1 F1 Advanced TS-XW Racer or Ferrari F1 Wheel Advanced TS-PC Racer or Ferrari F1 Wheel Integral T500. Ferrari F1 Advanced TX wheel or Ferrari F1 Advanced T300 wheel. Shared comments:- For most games (e.g. GTR, rFactor, iRacing): in OPTIONS/CONTROLS/FORCE FEEDBACK settings, feedback effects must be installed on POSITIVE and Values or NON-REVERSED. About Joystick, Gamepad and Wheel Updates: Installing controller drivers and utilities allows the system to correctly recognize a connected device (wired or wireless products) and use all the functions of the device, such as feedback, user vibrations and others. In addition, the application of the relevant files allows users to customize the functions and buttons of the controller, and can even add support for various accessories compatible with the device. As for applying this release, the steps are very simple: make sure your operating system is supported by this software, get the package (extract it if necessary), run the available installation, and follow the instructions on the screen for the full installation. While other OSes may also be compatible, we do not recommend using this release on platforms other than those mentioned. In addition to this, once the software is installed, we propose to bring out the restart system to make sure that the changes take effect properly. That being said, click the download button, get and install the controller software, and enjoy all its available features. Also, be sure to check with our site as often as possible to stay up to date with the latest releases. It is highly recommended to always use the latest versions of the driver available. Try setting a recovery point for the system before installing the device driver. This will help if you have installed the wrong or mismatched driver. Problems can occur when your hardware is too old or no longer supported. On a PC, a USB sliding switch based on the T300 RS and T150 racing wheel should always be mounted on the PS3 position! The firmware version of your wheel is displayed in the top right version in the control panel tabs. Firmware: 31 is the latest version. !!! With this new firmware, the base of the racing wheel now processes (and detects) a different type of pedal set connected (via RJ12) to the base.
