The Play Store has apps, games, music, movies and more! Google Play Sore Lets you download and install Android apps on Google Play officially and safely. This is Google's official store and portal for Android apps, games and other content for your Android phone or tablet. Just like Apple has its own App Store, Google has a Google Play Store. It's a huge Android market and it gives users access to a variety of digital media such as movies, books, magazines, music and more. The Google Play Store is not available on the Google Play Store as a download app. So you can install the Google Play Store APK file for your Android devices APKPure.com. Play Store Allows you to download and install android apps in Google Play officially and safely. This is Google's official store and portal for Android apps, games and other content for your Android phone or tablet. Google Play is the heart of Android. Without it, a normal user will not be able to make their Android device work properly. So in this article we will let you know about the Google Play Store the latest updates and the latest version works. Just like Apple has its App Store, Google has Google Play! It's a huge place and it offers a lot of content for its users. The Play Store is not available on Google Play as a download app. Play Store only deals with Android apps. The whole world uses it to download apps in their smartphones, Android wears or tablets. Users can search for and install their apps using this platform. The Appvn Appvn App Store is a similar platform for downloading apps and updates, but most apps are free here. The new Play Protect feature regularly checks your apps and devices for harmful activities. You will also be notified if there is some security risk. Now with Play Protection, you find your device using an app to search for my device or log in android.com. Play Store update to the latest version: Play Store comes on all Android devices because of its importance in managing installed apps and installing new ones. But usually for users who are either new to Android or to people who haven't updated their installed versions of the Play Store you can upgrade to the latest version of Google Play through this APK. You can start by downloading from this page if you want to get the latest version of the Google Play Store 2019 release. In addition, you can search for all kinds of apps such as music, games, books, videos, photo editors and more. Searching for a single word leads to a number of varieties of similar apps, and you can install the desired app on Android phone. It also displays the app's current ratings. So you can judge the app through the display rating and then install the app. App Update Via Play Store Directly: All apps you install on Android Device will be controlled by playing the game It will make sure that all the latest versions released by the app developers will reach you. When keeping your apps up to date you let them work properly. App updates usually contain bug fixes and new features that will make your app much better. Note: The Google Play Store won't work until Google Play services are installed on the device. Google Play presents people with personalized collections of apps and games based on criteria such as past user action, the actions they try to complete, location, and major events. These collections are automatically curated by the Google Play editorial team to make sure they include the latest version works. You can get apps, games and digital content for your device using the Google Play Store app. The Play Store app comes pre-installed on Android devices that support Google Play. Open the Play Store app: On your device, go to the App section. Click on the Google Play Store. The app will open and you want content to download. Google PlayStore Versions: If the download from the Play Store is not complete, try troubleshooting steps on you can't download from the Google Play Store. Play Store Also, Check Out: Download the latest Huawei AppGallery APK (10.5.0.303) Apps, Download Google Play Store 16.3.36, Download Google Play Store APK, Download the latest Google Play Store APK, Download the latest Google Play Store app, Google Apps APK, Google Play Store 16.3.36, Google Play Store 16.4.15, Google Play Store 16.6.26 APK, Google Play Store 16.9.10 APK, Google Play Store 17.16 APK, Google Play Store 17.2.13 APK , the Google Play Store app, the Google Play Store app is available for Android smartphones, tablets and Android TV, which distributes many types of services such as Google Play Music, Google Play Books, Google Play Newsstand and Google Play Movies and TV. This is the best place for Android smartphones that helps to find all our utility apps and games for fun. However, most prestigious and useful apps are available in the Google Play Store for payment, but there are also millions of interesting and entertaining apps that can be installed at no cost. We've brought the latest APK Google Play Store file, which can be downloaded here below. This is the official Google store, also known as Android Market, where we can search for and download or download music, games, magazines, books, movies, TV programs and other interesting apps that are developed and published by Google or third-party developers. Play Store not only for download, you can also update installed to get new features and improvements. One of the most important things is that help find a more reliable or top-rated app from Play Store reviews given by users who have already used these apps. Download Download Play Store APK App Title Google Play Store File Title play-store-22313.apk Version 22.3.13 File Size 20.36 MB Updated October 13, 2020 Download Google Play Store APK for Android Download Google Play Store APK for Android Find and install music, games, magazines, books, movies, TV programs and other content. You can check and update installed apps. Limit the contents of the Google Play Store. Stop other people from buying the app on your account Install apps directly from your computer or laptop. Choose a beta program where developers experiment with new features. Users can give ratings and reviews for downloaded apps in the Play Store. Install apps with limited regions from the Play Store. You can see the entire list of apps you've ever downloaded from the Play Store. In the Play Store, Android users can save apps for later ones in which they are interested in using the wish list button. The Google Play Store is the easiest way to get new and top-rated apps for your smartphone. If you're new to the Play Store, you have to go through some general settings after it will allow you to download its contents. Please note that you must have a valid Gmail account. While the Google Play Store comes preinstalled on Android smartphones and tablets, if you want to update the Play Store version so just click on the link above. There is no need to remove the old version from the phones, because once you install the last APK file on your smartphone or tablet, your Play Store update will be done. Google constantly updates the Play Store from time to time and provides more access to find our favorite app and games, but we've noticed that it doesn't provide all the services for each country. Overall, it's the best portal for Android apps and games. Go back to our blog for all the latest APK for Android devices, and more updates on Google Play. 安装Google 手机必须有安装商店时候的服务框架、google服务 (目前各-android应用商店已经上架了谷歌安装器.自行前往下载即可)经验内容仅供参考.如果您需帮决具体问题 (尤其法律、医学等领域), 建议您详细咨询相关领域专业士。 举报侵è 声明:本篇经验系本人依照真实经历原创,未经许可,谢绝转载。 Page 2 Google Play Store (Android Market) v3.5.16 Requirements: Android v2.2 Review: Play anywhere, All your entertainment in one place, Google Play is your one-stop store for all your favorite entertainment. ChangeLog: - Play Store has become much faster than 3.5.15, - Frequent power closing errors for Froyo 2.2 users have been resolved - Works faster, even at lower data speeds - Minor user interface changes in the my apps ----Yit is now installed and all the tabs you can swipe between them. The first is something we used to have before - lists all the apps installed on your device. The latter lists all the apps you've ever installed in case you want to download them again or travel through your memory lane. It's very handy and I've seen this list before in the Play Store on the internet, so it's great to get it here in the mobile app. ----Insyuk contains a handy drop with all your accounts (if you've added more than one) and allows you to switch between them very easily (as opposed to clicking the menu, etc.). ----Which of the stock apps that apparently never been associated with the Play Store before it got identified and picked up this time, and updates. DISCLAIMER: Quote: Continue with caution and at your own risk. I cannot be held responsible for any data loss or any damage to your phone as a result of using this mod. Using this mod: - You can't download/buy apps that aren't available in your country. You can only view them from the Google Play Store. - You can't download paid apps for free. NB: Google has control on the server side, so it is not possible to make a version that allows you to buy/download apps that are not available in your country. Mod Features: - Unlimited access to apps in the Google Play Store - Remote Countries Restrictions in the Google Play Store - Fixed the problem that your device is not compatible with this item in the Google Play Store You can only replace the current APK market for the original non-fashion version. You'll need ROOT if you want to install a trendy version! Installation Guide to the non-modded version: Quote: 1) Download APK from Link 2) Put APK on your phone, don't use the ADB set in won't work it will say that already exists 3) Open APK from your phone using a researcher file (e.g. ES File Explorer/Root Explorer) 4) it will ask you if you want to replace the current market, click yes. 5) Wait for the installation and vual you have a new market NOTE: this method replaces the old market. For the modded version: Quote: 1) ROOT is REQUIRED! If you don't have the roots of you phone, then shoot yourself already! 2) You will need to download 'Root Explorer' and mount as 'R/W' or any browser file that can access/root folder if you haven't installed it yet. 3) Go to '/system/app/' and back up 'Vending.apk' (Gingerbread) or 'Phonesky.apk' (ICS) to SD card (leave Vending.odex intact!). 4) Check if you have either Vending.apk or Phonesky.apk and remove it. 5) Now, move the modded APK that you downloaded on '/system/app/' and rename it just like your backup version. 6) Change the resolution to 'rw-r-r--' 7) NOW, Reboot the phone! 8) Finito! Citation: Troubleshoot: If you have The problem with downloading after installing a new market do this Connect the phone to the computer installed in mass usb storage mode. Look for a hidden folder called .android_secure, and then delete the smdl2tmp1 .asec file. Unmount and you have to be good to go. : androidadvices.com @ChangeLog Зеркала: Google Play Store v3.5.16 Google Play Store v3.5.16 MOD Прикрепленные файлы Следующие 130 пользователей говорят спасибо Deeco7 За этот полезный пост: 666Shadow (8 апреля 2013 г.), abby1314 (2 февраля 2013 г.), abгульсий (19 июня 2013 г.), adz63(9 апреля 2012 г.), Агент-Дроид (15 января 2012 г.), АхмадОкда (17 апреля 2012 г.), алеппиро (15 января 2014 г.), АхмадОкда (17 апреля 2012 г.), алеппиро (15 января 2014 г.) 15 апреля 2012 г.), Али Магди (17 апреля 2012 г.), Андерсонджк (29 апреля 2012 г.), andras.tim (18 декабря 2013 г.), Энфилдшанкли (7 апреля 2012 г.), Энтонико (15 августа 2012 г.), аквафкс (24 июня 2013 г.), Энтонико (15 августа 2012 г.), аквафкс (24 июня 2013 г.), arocho2539 (27 июля 2012 г.), ATN24 (11 апреля 2012 г.), бамсбамкс (16 апреля 2012 г.), бульфегора (5 апреля 2012 г.), бенсул (26 апреля 2012 г.), бигбадмоше (3 августа 2012 г.), Blackboys(16th April 2012), burakgon(15th April 2012), buzzboy(11th April 2012), caitoniimarga(11th April 2012), cthulhu501(17th April 2012), dajj(15th April 2012), daralph(16th April 2012), DemonDan(16th June 2012), DjBastard(17th April 2012), DJBoxer(6th April 2012), dongqisheng520(18th April 2012), doomerxx(16th April 2012), DSA(10th April 2012), edwardxi(18th April 2012), ekosmd(4th May 2012), ephraim(12th April 2012), ercxar(19th April 2012), explorer4490(26th May 2013), eyestorm(12th August 2013), Fishawy(7th April 2012), Franivelius(17th April 2012), Galaid(16th April 2012), gr8hairy1(16th April 2012), halui(18th April 2012), Hamza Android(27th October 2013), hothothotdog(18th May 2012), ImbaWind(16th April 2012), imimimi(16th April 2012), Istvan_86(18th April 2012), J3Rl3L(8th May 2012) , josvince(10th May 2012), JSconnected(16th April 2012), Kagoo(17th April 2012), kamaliqwan(2nd May 2012), kapoloclubs(6th April 2013), karbonna1(10th September 2013), kent_lkc(15th April 2012), kevalthakkar(10th January 2014), khoailang2500(19th May 2014), kinansyria(1st June 2013), kobeliza(1st May 2012), kozmo2k4(9th October 2012), kudadai(10th November 2013), lrm537(15th April 2012), MacGyverLarisa(6th November 2012), Magelix(20th April 2012), masi(17th April 2012), makoy26(24th July 2014), marcopolo(6th June 2012), marian.capota(3rd May 2012), mfractal(17th April 2012), micmacco(6th April 2012) , midknight2k(16th April 2012), mikesf(15th April 2012), MintIceCream(26th April 2013), mithrial(8th May 2012), Mkvarner(25th July 2012), Mohib(16th April 2012), MPooZD(4th November 2012), msquared(27th November 2012), mubeemshahid (11 августа 2012 г.), mvszgz (9 июня 2013 г.), n1kolaa (16 апреля 2012 г.), наюла (5-е место) Май 2012 г.), Нелинский (15 апреля 2012 г.), neog17 (6 мая 2012 г.), nidhish91 (16 апреля 2012 г.), nmrfgomes (August 17, 2012), Obartuckc (December 22, 2012), Olympus593 (1st July 2012), OmarBizreh (April 16, 2012), pockobg (April 15, 2012), pustinjak (July 16, 2012), pockobg (April 15, 2012), pustinjak (July 16, 2012). 2012), Roob012012), richardyiu(16th April 2012), rm9215(17th July 2012), Robobob1221(10th April 2012), ronnbon(3rd May 2012), RooceeD(9th April 2012), Saphroxx(24th June 2012), Schrotty35(5th April 2012), shadowkay(15th April 2012), shagnasty360(27th May 2013), sharljimhtsin(20th April 2012), shevchovski(11th June 2014), Siyamand(9th April 2012), Smitelight(17th April 2012), soyuutaku(18th April 2012), strikes301(28th February 2013), syamsoul(16th April 2012), tangcla(17th April 2012), technut(23rd September 2012), teenahbabe(24th October 2013), thamlim(19th May 2012), tolis626(16th April 2012), tzc9338(20th April 2013), vinayhegde90(24th May 2012), virus786(24th April 2012), wallah(5th April 2012), Xenobio(17th June 2012), xman323(20th April 2012), ymouba(17th April 2012), Yshing.Lan(20th December 2016), yykyaw(1st February 2015) , Zaatur36 (April 16, 2012), SIC (July 21, 2012) April 5, 2012, 12:10 AM No #2 Senior member of Wellington More Modded version, to have all applications and countries and restriction devices removed The following 19 users say thank you xinfinityoO for this useful post: 51 (April 10, 2012), Belfegor (April 9, 2012), Daralf (16 April 2012), Gbajerri (June 1, 2013), eyowztigoin (April 20, 2012), Istvan_86 (April 18, 2012), jhyog (December 8, 2012) 2012), Kanikamus (April 20, 2012), LonerDarke (February 17, 2013), MintIceCream (April 26, 2013), Nmrfgoms (17 August 2013), Nmrfham (August 17, 2013), 2012), Olympus593 (July 1, 2012), pucat_ws (February 17, 2013), strikes301 (February 2, 2013), shadow (April 15, 2012), teenahbate (October 24, 2013), tolis626 (April 16, 2012), April 5, 2012, 12:29am No # 3 Junior Member Read More quote: Originally published by Deeco7 - Minor user interface changes in the My Apps section ----Yo's now installed and all tabs you can swipe between them. I unistalled the old market with a titanium package nandroid backup and posted vending.apk it in / system /apps, rebooted and finished April 5, 2012, 09:35 am no #8 junior member More @protetul: do not try to install it, download the version that xinfinityoo posted and put it in / system / application, change permissions and reboot, it should work. I use the last .odgf April 5, 2012, 10:45 am #9 Hi, I can not download the attache in your post when I try to download it. it's too small and has trouble parsing the package. April 5, 2012, 10:59 a.m. no #10 Junior Member More Try to download the version in the post #2 and look at the post before yours. April 5, 2012, 11:21 #11 Links corrected and the fashion version added! Page 2 Final Update- Some people have asked for source code/instructions, so once again, this is the method I used, all credit Rafalense. amp;amp;sourcount=268 those of you who want me to reboot the APC, I'm sorry, I don't have any more, and I wouldn't bet them even if I did. They are based on processes to THE ANCIENT, and while I can appreciate you still like functionality somehow, I'm not interested in taking on the project again at this time. Thank you so much for your continued use and desire for my work though, it's very flattering. I will not actively develop or support this any more because of its defunct nature. If you want something like this, I highly recommend the lgCamera app, which has a much better implementation of improved bitrates (select all the bitrates you want on the menu.) you can get lgCamera on the market- I highly recommend it. Anyone who wants to pick up this project can feel free to discuss here or make a new topic as you please. If you do, please include a link to the Rafalense guide, as this was the basis for this fashion and will no doubt be used for someone (Original post below) ----- In light of my new student status, and since my student loan doesn't even cover my accommodation... I did donate the link. If you use mod regularly, please consider donating, this will really help me. Don't worry if you can't, I obviously wasn't able to be free for everyone to use. Thank you for your support-- Potatoman. -- Hey people- It's with great pleasure that I release hacked Camera.apk for all of you today! This is my first android mod, so be gentle Info- APK replaces the stock of Camera.Apk's Galaxy S II (or Samsung Captivate!), and has the following features-- allows you to use a camera and video camera in any battery life - Recordings Audio in 192kbps/44.1Khz quality) - Increase Bitrate video in 1080 and 720p modes (see 2nd post for information and download link to this version) - Extra No Sounds (for standard and standard and and version) - All features, None of the noise! Yes, even the noise of autofocus has disappeared! - HyperX-in SuperHighBit version is now available (see 2nd post for information and download link to this version) I left settings for 320x240 and 176x144 resolution modes as promotions, so they will be the same size and with the same audio. This is to ensure video messages are stored within filesize before/after comparison (thanks robbiekhan)- Quote: Originally published bykhan robbie Do: After: Treble is high for high-profile sources in this fashion, I'm working on improving it in v2. At this point, just stand further back, as Robbiekhan said - Potatoman Treble seems high, so the apology for this, the volume of the car was higher than I realized the extra information: If you want to get rid of the shutter sound, create a file in /data called local.prop and add this code- ---- In the /data/local local.prop and add your Camera.sound.forced0 and restart the phone. This removes the shutter sound and the sound of focus when your phone is on. This ensures the sound when it is not on silent. - IIBlackeneedll Set Guide: 1) Root and install a file manager that lets you view root 2) view/system/app. and rename your Camera.apk on Camera.apk.bak and your Camera.odex to Camera.odex.bak (to use as a backup to recover from) 3) Unrar my APK (password: email protected) and copy it on/system / 4) Rename it Camera.apk 5) Close file manager and run the camera app for the main menu 6) or the label is missing, go back to /system/app folder and try to install it (click it in the root explorer then install). This step is only reverse, do not do this if it is already working at step 5. 7) Enjoy! ADB Set a Guide- See the second post! This mod will always be free for everyone to use on my own Galaxy S II with KE2, KE7, KG1, VillainROM and CognitionROM firmware. --- thank you all, hope you enjoy it! Thank you if you like it (Download: (Download without sounds: Camera_click cam_stopp the same password cam_start. Camera_click_short.ogg, Shutter_01.ogg and videoRecord.ogg of /system/media/audio/ui rm cam' rm Cam' rm Shut' rm Video-- Credits-Potato - Sound Implied - Merging Features - Version Of Cleavage / Maintaining Soraxd - Original Battery life functionality - upcoming music playback feature Rafalense - a great post that will lead me through how to make this mod over on the Galaxy S forums pulser_g2 - Original battery life (with soraxD) IIBlackeneedll - a tip on how to disable shutter sounds - Before/after comparison video Antoniotdi - Excellent bugfix hyperX - Great minds think so yes? HyperX released a similar mod to this on the same day as me! Anyway, we'll work on cameramods from now on. Good news, right? Can you remove apps and widget tabs? Sent from my GT-I9100 via Tapatalk on May 13, 2014, 09:22pm #11 6 NoMoarPowah! Replaces this boring charging animation when your phone is off, but connected to a charger with a fully functional program! In the history of the stupidest things I've done, this is perhaps the stupidest app for just a select number of Samsung devices. It doesn't work on any other devices. See the list below This app requires a fully rooted NoMoarPowah device! can automatically reboot in Android when charging. Either when fully charged or when the battery level reaches 15% and Android has enough juice to run. But wait, that's not all! NoMoarPowah! can also reboot at normal times. It will even offer times based on your current alarms installed, so your phone will be rebooted just before the alarm goes off and you need to wake up! This way you can be sure no one will bother you while taking your well-deserved sleep, but still wake up when you need to. Tested on the following devices: - Samsung Galaxy S (I9000) and family - Samsung Galaxy S2 (I9100) and family - Samsung Galaxy Tab 7 (P1000) and family - Samsung Droid Charge - Samsung/T-Mobile Sidekick 4G - Samsung Continuum (ticker overlaps) Half runs on Samsung Galaxy Tab 10.1 (all models): functionality is not running. Other devices in the Samsung Galaxy series with a resolution of 800x480 or more can work as well. Some custom ROMs can disable NoMoarPowah! Functionality Screenshots Screenshots are attached for those interested. Download the free version has.ads, there is also a pro version available, for a dollar. About the version does not show advertising, has night mode and mode of reduced brightness. Free version is on the market: desktop - mobile version of Pro on the market: desktop - mobile version Chainfire for this useful post $omator:011), agc93 (108 September 15, 2011), andrepaier (May 18, 2012), BJrNz (February 23, 2012), bacb (December 16, 2011), BC. oo115 (August 7, 2011), beWater (July 14, 2011), Biffroy (October 15 Bio88 (July 14, 2011), Briovers (18th place) September 2011), cammi123 (February 21, 2015), cdesai (July 14, 2011), conantrut (July 13, 2011), daigoro64 (24th daigoro64 (24th daigoro64 (24th daigoro64 (24th 2011), daly79(13th July 2011), ElecDrOx666(15th July 2011), exbiondo(11th October 2012), fluidz(17th July 2011), FrA1I3(29th December 2011), frewys(15th July 2011), FurFur_(25th May 2013), GeneralSmart(17th March 2012), giokou(13th July 2011), golf2vr6(13th July 2011), grojas(14th July 2011), hammerman4(25th September 2011), Helga365(20th March 2013), hka148(6th August 2011), huchein(7th June 2012), imilic(26th March 2013), integspec(28th August 2011), intronauta(14th July 2011), izans(15th December 2012), jackal2(2nd June 2012), jamesd86(30th June 2012), jocoliu(15th November 2011), jvpde(3rd August 2011), k1000716(10th February 2012), kahjuay(5th August 2011), kobellza(26th June 2012), kryptoner(14th July 2011), Kumabear(25th January 2012), Lar3s(13th July 2011), leo321(6th April 2012), lesp4ul(24th May 2012), MORT3ZA(20th July 2014), madushan92(26th March 2012), Majar_Sarcasm(13th July 2011), masnoordk(27th February 2013), MAQ7(26th March 2012), Matchpoint(17th February 2012), mayanks_098(9th December 2011), mehran_286(5th April 2014), mercury(9th March 2012), mirhl(14th September 2019), MrWilsonxD(22nd June 2016), netjunkie51(28th September 2011), nimaemami20(11th May 2013), NotATreoFan(14th July 2011), ncrnbow(14th July 2011), ode178(13th July 2011), onbacardi(2nd December 2012), o_afifi(4th April 2012), paul88gt(28th September 2011), PoorCollegeGuy(24th January 2012), qm4n76(2nd June 2012), Randall Flagg78(20th July 2011), rcade2005(12th December 2012), redmanc35(14th July 2012), RejivarN(19th September 2011), rizcom(6th March 2012), rmourar(14th July 2011), rodak69(14th July 2011), sakyra(14th July 2011), samcope(29th July 2011), sarthakmttl(18th September 2011), sgeto(18th March 2016), shaq1907(2nd December 2012), shark_cs(29th July 2011), shisux(16th July 2011), SimplyD(19th July 2011), Slotte(13th July 2011), SLX69(14th July 2011), soulscythe(11th April 2012), sshvetsov(14th July 2011), sumitpathak(5th June 2012), syamsoul(6th June 2012), syamsoul(6th June 2012), takkaros(19th December 2012), TechTalkNewsAndReviews(16th April 2012), Techvir(14th July 2011), Tefanym(20th August 2012), the-bomber(5th November 2012), Unimaginative(17th December 2011), uppon2(19th November 2011), Vertuimus(13th July 2011), vri29(6th August 2011), xan(14th July 2011), Yasserbn (23 декабря 2012 г.), zimloks (4 мара 2013 г.) 13 июля 2011 г., 09:02 PM (#2 OP Модератор Почетный / Старший признанный разработчик - Где моя рубашка? It may well be compatible #11. that and the asshole off. It's not dangerous to try. It is installed and is working on the charge. Page 7 CWM Method change download script (screen before Bootanimation) Disclaimer; I'm not responsible for brick devices, dead SD cards !!! 1. download SGS2_custom_param_lfs_cwm.zip. 2. copy to sdcard. 3. SGS2 flash _custom_param_lfs_cwm.zip via cwm. 4.after flashed the reboot of the phone and will see the logo.jpg draw fail green message. (That's OK!) 5.rename the user image into a logo and copy it to sdcard. (User images !!! 480x800 and a maximum size of 100 kB JPEG image) 6.copy a new custom image logo from Root Explorer/File Explorer/... to /mnt/.lfs/ and set the resolution. (see attached image; 0777) 7.Reboot your phone and you see a new screen download spike. NOTE; If you want to support the original flash SGS2_stock_param_lfs_cwm.zip-attached my collection of logos (extract and rename the logo) thanks to -coninexion2005;custom_param - shinyu_cwm zip. Download -SGS2_custom_param_lfs_cwm.zip - my collection of logos - SGS2_stock_param_lfs_cwm.zip Attached By Thumbnails July 20, 2016, 04:29 PM #2 Senior Member More On August 28, 2016, 09:44 PM No #3 More logo.jpg draw failed Thank you for the tutorial! I'm sure I'm the one doing something wrong, but I can't figure that. like the ram-way and through the one that led to the logo.jpg draw fail... So the part works, but adding my image doesn't work. I've tried several different images, including yours and changed the resolution accordingly, but I just doesn't seem to take it. It's fine boots though. I've been doing this before, about a year ago, and it worked fine, so I'm wondering if this has to do with my partitioning or that I've upgraded to marshmallows recently (battery charging animation changed after the update, did something else change too, perhaps? October 19, 2016, 01:41 #4 this applies to Marshmallow (CM13)? @alexbokor40, the same problem with @luvis, after flashing lightning, is able to get the logo.jpg fail, but after copying the logo.jpg into the folder .lfs, install the correct resolution and restart, nothing happens. I'm on a CM13 official as well as a custom pit. I also notice when I discover .lfs folder in a root researcher, I can't see other files within it. Last time I was on 4.1.2, I could see other files. Any advice will be highly appreciated mate. October 20, 2016, 23:44 #5 December 19, 2016, 08:25 #6 It does not work on Android 7.0 nougat. I didn't find a no file on /mnt/.lfs/ And I didn't get a green logo message.jpg draw fail after flashing through twrp 3.0.2 Do you have another method? January 3, 2017, 12:42 #7 junior member Read more is there a way to do this through build.prop? Has anyone tried? way param.ls seems to be failing. In my s2 with cm 13 bootlogo is not removed, flashes one. Page 8 sync the iCloud calendar on your Android device for free. This app uses the caldav protocol to sync the calendar with the Android device. How to use: If you use Windows, you can use this tool to get the information you need: Replace UNIQUE_ID with your iCloud unique id user number (you can get from the app on the windows). Replace the calendar name with the name of the calendar. You can also find 'p02' in the server address to your server address from the app on the windows. Click the sync button anytime you want to sync your calendar. Synchronization works both ways. May 5, 2014, 9:07 #2 May 5, 2014, 10:12 AM #3 quote: Originally published pang2000 I used your program and it works for the main calendar, but not for the general calendar - it tells me something voices. Could you help. And I left p02 the same, although it says p16 in the program. but both give the same results. Please help me get a shared calendar Thanks it is always best to use this server address, in your case p16. If you use Windows software to get your data, this should be a good thing. I'll take a look at him. In the meantime, you can try to search a little at the address needed for the common CalDav calendars May 5, 2014, 12:26 #4 Read more Originally published as Theumad It's always best to use this server address, in your case p16. If you use Windows software to get your data, this should be a good thing. I'll take a look at him. In the meantime, you can try to search a little at the address needed for the common CalDav calendars. I hope it helps. I couldn't find anything in Google, so any help would be appreciated, since I keep my appointments in the general calendar address set: address book-home set: the URL of the general calendar. Common House: (this one doesn't work, and it gives an error) URL tasks (default): Reminders: URL calendar: Work: (it works) URL address: Contacts: May 5, 2014 12:28 pm #5 Do you have a shared calendar or a shared calendar belongs to someone else? In short, it is a structure that can be used to create change without touching APKs, which in turn means that nothing should have fixed up. Tweakbox was the first module for Xposed and was designed for 4.0.3 ROM stocks for the Galaxy S2. While Xposed works with many different devices and ROMs, quite a few (or many?) of the setting boxes suggest certain existing code in THE ROM that can be fixed and used. As a result, they may work or work for you. Especially if you have a phone, not Samsung, only a few of the settings will work. It depends on your exact ROM that will work. I can't tell you because I use Tweakbox after my switch to CM10.1. Therefore, this module is no longer actively supported. You can try it if it works for you, but it is unlikely that more features or support support more devices will be added. Patches are still welcome. So please don't get upset if it doesn't work for you - I planned to delete it, but why should I? I know more people use it? Now the list of implemented settings:StatusbarNumber bars for signal strength indicator Background color. Looks strange actually because most apps aren't made for this. The watch color switch input method notification when typing CRT text (see below for requirements - probably won't work for you)CRT from the CRT effect on the EFFECT of the BatteryLevels landscape detection effect for critical/low battery warning to disable Samsung 100% charged, Disable Me Now Notification PhoneVibrate on Call Wait Increase Ringer Tom Call Record (see below for requirements - probably won't work for you) Built-in SIP MiscellaneousDon't flash on the screen when disconnected from USB/AC Select long HOME key behavior (nothing to do, classic/icon only, new/thumbnails). Just installs the switch, the implementation should exist in ROM. Skip tracks with a long press at the volume up/down key, ported from here (only when the screen is off) ExperimentalFake 240 DPI for Play Store Colors can be selected with an extended version of the color collector made email protected It gives the option to choose any color RGB plus transparency - stepless! REQUIREMENTS for CRT/call record: THE CRT effect requires that /system/lib/libsurfaceflinger.so is prepared for this effect. Many phones produce a flicker for CRT from the effect. CRT on the effect and rotation of awareness is not installed in a normal library. Patching the library is a lot of work, and unfortunately the library cannot be transferred to other ROMs or phones in most cases. If you have a stock ROM for your I9100, you can click the library from the attached zip file to be found here. For other phones / ROM / version: Sorry, I do not plan to patch more libraries. The recording call will probably only work on the I9100 ICS Stock, and only if you have a library set up with that post. Same game: Know what you're doing or not doing. I don't know where these libraries came from, so I can't give them to other BAT. You can also try this module, I find that only works on Samsungs JB ROMs though. Changelog: 1.0: Initial version (126 downloads) 1.1: Fixed signal strength bands, added color collector for the status bar background color, added switch (added to this version) 1.2: Lots of new things (3676 downloads) Switch switch input notification method when typing - CRT Off (no flicker)/CRT on/landscape awareness for SGS2 (verified) and SGS3 (waiting for feedback). Also causing causes эффект, если ПЗУ не (должен исправить SGS3.) - Телефон настройке: Вибрировать на Call Wait, Увеличение Ringer Том, Запись звонков, Встроенный SIP - (экспериментальный) Play Store исправить для несандартных плотностей 1.3.1: Незначительные изменения для Хросед 2.1 1.4.0: Часы цвет настройки теперь должны работать для новых боев ROMs. Удалено (не работает) исправление flicker и скрытые настройки DPI для приложений Установка: Смотрите первый пост в потоке фреймворка Xposed. Вам нужна основа и прикрепленный модуль. Исходный код: на GitHub. Кредиты Tungstwenty за свою поддержку и его многочисленные взносы, CM9 проекта для длинного пресса объем ключ мод, el_liberator за имена с статус-бар цвета, attenzione для выбора цвета. I hope you can fix it. May 1, 2012, 08:44 PM No #3 quote: OriginallyJust100 Although the 5/6 signal bar mod works, it still has a maximum value of 4 signal bars with the last 1/2 bars always empty. This setup actually just allows for something built-in but deactivated. And it seems that Samsung has just started implementing this but hasn't finished it. The part where the signal strength will be displayed is still in the 0 to 4 range. I'll see what I can do. I think Jkay activated the same feature, so maybe he can tell me what he did to fix it. May 1, 2012, 09:07 PM #4 without problems. Hopefully you can fix it! also, could you mod an also support for Silksense versions, time to hide, battery to hide? I have small bodies... May 2, 2012, 07:46 PM #5 Signal Force bars are already set, can be interpolated (meaning that Level 1 will be displayed, clear Level 5 for the 6-bar version, have a range of 0 to instead of 0 to 4.) I also started looking into the iconic legal stand-up states. I think I found something close to it here. May 5, 2012, 07:00 PM #6 want to make new signal gsm 5 bar, like that it is 6 Can you make it anyway May 5, 2012, 7:04 p.m. #7 thread Things to consider delighting - ICS lockscreen on/off - sammy lockscreen on/off - hide sms from call log - no auto-convert sms to mms - switches?- the color of the wash - the new bar notifications in the HD? - brightness level/profile - lockscreen switch - density change from market modder - show/hide statusbar icons - hardware button for the camera - not low/full battery sound - reboot options - newways to unlock text from ls - tranparent ls... There is so much u can realize... I think this is a problem jkay is struggling with. Samsung and everyone here watched on May 9, 2012, 09:39 #9 on the extra side to correct the force signal, I added the ability to change the size of the bar hours. also, I fixed your green color picker and added it to the settings. This allows you to choose any color with any transparency. May 9, 2012, 09:09 p.m. #10 @haasgo: Thank you for the big list of offers! So I'm going to get your list of offers! Some things to know this I have live girlfriend and don't want to send every minute minute developing, otherwise I'll probably lose interest anytime soon. As I use Go Launcher EX, WidgetLocker and exDialer, it is very unlikely that I would need to attach a hoot or a launcher, lockscreen or dialer. Also you mentioned some SMS related things. I write and receive free time for this hobby. For the community, the great addon value you can bring - in addition to the huge step already achieved - is perhaps an improved framework resource and the more restricted one where the tasks easier and easier. One example of the tasks easier and easier. One example of the tasks easier and easier. I'd more like to get (or realize when I get a chance) is definitely quick switches and extra entries for the food menu of which I believe hasego meant when mentions options ???). Also, in the structure itself, I'm still have no level of support for changes without touching the APK, or the more I'll believe hasego meant when mentions options ???). Also, in the structure itself, I'm still have no level of support for changes without rebooting, that is: activation/deactivation of each change anytime anytime without rebooting. At the moment this isn't happening because my level of support for changes is ?flash and doesn't require reboot. May 9, 2012, 09:12 PM #11 totally agree with your approach to this. You come with amazing concept, took the effort to actually Tweakbox items and flipping them immediately, also, I see some little things that can be useful in the structure itself, but a certain amount of tasks to happen once this thing gains momentum it will be outstanding as the framework, bringing more and more developers into this Page 15 Hi xdaerds, this is a full bar of a new window bar ... Finally it arrived. 29 November 2011, 09:32 #5 Sent from my GT-I9100 via XDA App on November 30, 2011, 05:12 PM A great app, just what I was looking to do some tests! November 30, 2011, 05:25 p.m. #7 More details November 30, 2011, 06:42 PM (#8 senior member of New York More Beautiful!! Why won't Samsung include this from the start?? Only one thing though, I think there is a typo. The standard is written by Standart in a color profile. 30 November 2011, 06:43 PM No #9 quote: originally published srikanth.naidu needs an option, to get back to defaults, please left_soft and top menu point November 30, 2011, 07:06 PM No #10 Senior Member More Great App Thank you Sends from my GT-I9100 via XDA Premium November 30, 2011, 11:35pm No #11 Senior member of Nottingham More Screen My Screen No longer has a blue tint!!! I thank you so much :) Page 19 We've all read horror stories: a new virus is creeping through third-party stores, trying to steal your personal information, identity and firstborn. More often than not, this type of malicious application is made possible due to one of the different root vulnerabilities that have been discovered in different versions of Android. X-Ray is a new app that lets you see how vulnerable your device is by scanning it against several of these feats, including RageAgainstTheCage, Gingerbreak, Mempodroid, Levitator, and a few more. It's extremely easy to use: just install it and start scanning. It will go through each exploit in a matter of minutes and display whether the device is ultimately vulnerable, it is good to know what exploits, if any, your device is vulnerable to. The more you know, the easier it is to protect your device. X-Ray is absolutely free (but not in the Play Store) so here's the download link The following 21 users say thank you NOMIOMI for this useful post: asia559571 (October 10, 2017), ayush29k (August 14, 2012), bigbadmoshe (August 13, 2012), darksmartz (August 14, 2012), darksmartz (August 14, 2012), darksmartz (August 14, 2012), darksmartz (August 13, 2012), darksmartz (August 14, 2012), darksmartz (August 14, 2012), darksmartz (August 13, 2012), darksmartz (August 2 August 13, 2012), Edbertin (August 13, 2012), Eciclover1337 (August 14, 2012), indigoh (August 13, 2012), java041 (15 2012), kaito83 (14 августа 2012), Madpnm (16 августа 2012), maej72(21st maej72(21st 2013), midnight (August 17, 2012), nuts70 (August 14, 2012), philymade (August 14, 2012), Rob Irizarry (August 14, 201 Speedypoint (August 14, 2012), thippesh (July 31, 2013) July 24, 2012, 12:51 p.m. #3 is waiting for more reviews... This is a small program for resetting the fuel sensor chip on the Samsung Galaxy S2 I9100 model OK, but can we reset it through ExTweaks and STweaks?! Yes, you can, but only if you use the core of Siyah or Dorimanx, if you are on another core like Jeboo, then you will need to use this app What's new? v2.0: -Added super user resolution in AndroidManifest.xml -Fixed force close when you open frequently asked questions -Changed icon v1.4: -Fixed security issues -Optimized code for opening frequently asked questions v1.3: -Added frequently asked questions v1.2: - New Dialogues - Optimized code v1.1: - Linked RootTools libs Download: FuelGaugeTool - Google Play Downloads on XDA: 4118 Attached Thumbnails Next 47 users say thank you Guestk00135 for this useful post: (May 5, 5 May 5 2013), BANKS(May 10, 2013), blueprtaham (May 4, 2013), bugdan(1980 May 4, 2013), Chancer00 (May 9, Demonic (May 10, 2013), Degman (May 9, 2013), demonic (May 10, 2013) Degman (May 9, 2013), Demonic (May 10, 2013), July 6, 2013), Wildly Advar (May 27, 2013), Drat71 (July 31, 2017), Fr0zens (July 15, 2013), Gerald7 (November 23, 2013), Inouext (May 2014) , Joaomarques (March 2, 2015), punatam (May 27, 2013), Kai Disobey (May 5, 2013), Leorock88 (February 3, 201 4), Nomad (24th March 2013), MRTO3za (December 15, 2014), lucasbmz2 (November 6, 2013), MRTO3za (December 15, 2014), M3), Madzo (August 3, 2013), Mako0 (November 9, 2013), mekoa8 (May 30, 2013), monnmb (February 7, 2014), mukito (12th place June 2012), N1m0Y (January 27, 2014), naith_kk (August 15, 2014), Nidzon (May 20, 2014), March 2014), paranoidisc(26 мая 2013), photosam (6 мая 2014), ronald_loulan (7 июня 2013), Seary (3 мая 2013), Sikac101 (10 мая 2013), Skyline (14 ноября 2015), кочергз (21 мая 2013), КРАСНОЕ БЛУР (15 мая 2013), thewolverinebp(15 10 мая 2013 г.), Третьбыте (28 октября 2013 г.), тродо (14 сентября 2014 г.), Несертифицированный робот (13 марта 2015 г.), вагойбостеро (5 ноября 2013 г.), Вакка (11 февраля 2016 г.), Виссодев (26 января 2015 г.), wowee_zowee (29 января 2017 г.), Задаж (13 мая 2014) #4 мая 2013, 03:49 УТРА #2 старший член Подробнее можете у, пожалуйста, подробно рассказать у нам начиная, как мы должны сбросить датчик топлива ЧИР?? I'm the exact need to do it?? I never got any help doing it actually, it's y ask May 4, 2013, 06:14 am #3 By resetting guage you delete the battery statistics file and create.a fresh file. This system only work via channels while on the battery, and it helps the battery last longer, without any conflict with other applications. Sent from my GT-I9100 using the XDA app-developer app on May 4, 2013, 07:03am No #4 Senior Member Read More Quote: Originally published by Sejk97 You can, but no need for this, I use it only when I change the rum/core or when my fuel sensor chip go crazy Sent out of my GT-I9100 using XDA Premium on May 4, 2013, 09:42 am #7 More Some people say yes, some don't... For me personally it's not like calibration because it won't make the battery for me, it won't make the battery for me, so I use it only for 30% (or less or more) so FuelGaugeTool fixes the fuel sensor chip in your I9100 Sent from my GT-I9100 with via XDA Premium May 9, 2013, 09:35 #9 PM May 10, 2013, 07:15 #10 member Windhoek More I got it. Its good for me on Jeebo v2.2. Sent from my GT-I9100 using the XDA app-developer app on May 10, 2013, 12:23 p.m. #11 more Hello! I can't pass on the security issue. I use Omega ROM (based on XWLSN) and everything I click on the keyboard doesn't appear in the app. What's wrong with him? Okay, it's my fault. I found what I did. So. Page 25 Hello, I want to share some information about param.lfs. Like some people, I tried to study this file. I tried the port j4fs driver, linux to no avail yet. But I have something. For those ROM-makers who want to insert their own logo right in to flash it as part of the ROM you can do the following: 1. Prepare the jpeg file, process it through the jpeg optimizer (e.g. xat.com JPEG optimizer). The size should not exceed 3FD1 (HEX), or 16337Bytes. 480x800, 72dpi 2. Download this file (jpeg) to the HEX editor (WinHex) and copy it as Block 3. Load param.lfs 4. Rewrite the two blocks in param.lfs on the image (just insert the block into overwork mode). The first - from the displacement of the B4000, the second - from 7F000. To double check - re-recorded blocks should start with FF D8 That's all. Tar param.lfs, as it used be: resin -H ustar -1 param.lfs.lfs zgt; param.tar and flash it through one file like PDA, or add to the firmware then. You get your own logo.jpg and logo_kor.jpg in /mnt/.lfs So, you don't need to use special scripts to change the splash-screen (mount .lfs and copy logo.jpg into it). It will start with any core. Even in a firmware warehouse you can use your own bootlogo. Warning: Be careful. If you do something wrong, the phone will not download because param.lfs is used by the loader. At least /mnt/.lfs will be empty. You may have a blackscreen. Anyway you'll be able to enter the 3-button mode to flash the stock of param.lfs back. Of course, this will not change the bootlogo with the yellow triangle, because it resides in sbl.bin and is very dangerous to be changed. P.S. I was going to write a post but decided not to. Cheers October 26, 2011, 11:12 p.m. #2 Junior member More As a newbye, I found it very interesting to read Thank You 1. My original logo is 18,100 bytes and wondering if the 3BB0 (HEX) limit is accurate? :'-- while 68 4000-$7F000-217.088 bytes 2. In my image param.lfs, I searched for FFD8 FFE0 and found another position to JFIF files Full signature, it seems FFD8 FFE0 0010 4946 0001 for . JFIF . 3. Linux support j4fs would be great 4. i would like to know how to deal with such particular behave in the section param.lfs: we can create files, but do not rewrite files ... Code: alpha-adb shell $sous y mountain-o remount,rw-t j4fs/dev/block/mmcblk0p0 on /mnt/.lfs type j4fs (rw,relatime) - cd/mnt/.lfs-rm fl logo.jpg rm: Operation is not allowed . You can't delete logo.jpg 1. It is impossible to remove logo.jpg - cp/mnt/sdcard/logo.jpg/logo.jpg - ls-ls/.lfs/logo0.jpg-rwxrwxrwx 1 Root Root 19524 Jan 1 1970 /mnt/.lfs/logo0.jpg copy on /mnt/.lfs/ perhaps, cp-f logo0.jpg logo.jpg cp: can't create 'logo.jpg' File exists and archives 2. logo.jpg impossible - chattr-i logo.jpg chattr: reading flags on logo.jpg: Not typewriter and rm-f logo.jpg rm: can't delete 'logo.jpg' Operation is not allowed - exit Really weird for a file system? Really weird for a file system? Is there any way to remove logo.jpg? October 27, 2011, 02:19 AM #3 senior member of Bofete Read more Quote: Originally published Ivan_Belarus Attention: Be careful. If you do something wrong, the phone will not be downloaded because the param.lfs is used by the downloader. It seems the B4000 in param.lfs I use (KI8) is not the beginning of JPEG. Tried other addresses that start with FF D8, with and w/o Exif, but to no avail. TIA param.lfs I use: EDIT: Wow! it took me a couple of hours, but I finally found it in that param.lfs (XWKI8) !!! The XWKI8 logo.jpg starts 7D800. Don't go beyond the length of the file you already have (in XWKI8, g/-15K), otherwise you'll get a draw failed download error and empty /mnt/.lfs - in this case, just reflash shares param.lfs and you'll be fine. It's working great! Now I can sleep! Once again, thx bunch of Ivan_Belarus for sharing information! Cheers!!! October 11, 2011, 10:30 PM NO #4 Quote: Originally published as Geekmarc 1.My original logo is 18,100 bytes and wondering if the 3BB0 (HEX) limit is accurate? : -while 68 4000-$7F000-217.088 bytes 2. In my image param.lfs, I searched the FFD8 FFE0 and found another position to the JFIF Files Full Signature, it seems FFD8 FFE0 0010 4A46 4946 0001 for . JFIF . 4. I wanted to know how to deal with such special behavior in the param.lfs section: we can create files but not rewrite files... Is there an easy way to remove logo.jpg? 1. Wrong operation. I gave bias only: for logo.jpg and logo_kor.jpg for this param.lfs for the B4000-B7FCF. We are talking about 3FCF-2'3FD1. Second: 7F000-839B2. It's about 49B2'2'49B4. (I wrote 3BB0 - sorry I looked at my own block size. 2. Yes, the jpeg headline is more than the well FF D8. You can Google for a jpeg header. The bit is marked by FF D9. There are many jpeg files inside. I provided a offset for two of them. 4. You can look at Init.V Siyah kernel scripts, for example (sbin/siyahiyah/imports.sh) - there you can find all the commands to replace the logo.jpg I attached my original param.lfs (unchanged). I used it without problems on KI8 Heh, I do not compare different param.lfs, but now I see that there are different builds of param.lfs (thnx to rizdroid). So, I think we are able to quickly find the necessary biases through block sizes and names. We need to find two. size 3FD1 (starts with FF D8, ends FF D9) and 49B4. They will logo.jpg and logo_kor.jpg images. Before these blocks (about -7E1) you you find the text 'logo.jpg' and 'logo_kor.jpg' respectively. Don't try to find them only by name! Attached files param.rar - Click on R Code (471.0 KB, 1313 views) April 24, 2012, 01:19 SCHA (#5 senior member of Derby More someone will help me here ... im trying to do it for Galaxy Connection, but whenever I open my file param.lfs in the hex editor all I get is 0's There's nothing in it September 14, 2014, 12:00 am no #6 quote: Originally published Ivan_Belarus 1. Wrong surgery. I gave bias only: for logo.jpg and logo_kor.jpg for this param.lfs for the B4000-B7FCF. We are talking about B4000-B7FCF. We are talking about 3FCF-2'3FD1. Second: 7F000-839B2. They will logo.jpg and logo_kor.jpg images. Before these blocks (about -7E1) you you find the text 'logo.jpg' and 'logo_kor.jpg' respectively. Don't try to find them only by name! WOOOOOOOOOOOOOOOOW !!!!! Yes!!!!! ;) @Ivan_Belarus, thank you so much for the guidance and help !!!!! I was wondering if I do, provided, because the image I made is SMALLER is that 16337Bytes. So I decided to 'logo.jpg' draw failed the problem I received (because I changed the of the logo.jpg) by filling 20 (hex value) all the cells between after my image FF D9 (not included) and the original logo.jpg END (FF D9 included), as you wrote in your post: 1st end jpg on B7FCF and second on 839B2. I used param.rar, which is SMALLER. So it starts at FFD8 and ends EARLIER with FFD9 as: Code: FFD8FFE1008134578E555184D5331DA88319308004500D0FFD9 But image I want is SMALLER, so it starts at FFD8 and ends EARLIER with FFD9 as: Code: FFD8FFE1008134578E555184D5331DA88319308004500D0FFD9 But image I want is SMALLER, so it starts at FFD8 and ends EARLIER with FFD9 as: Code: FFD8FFE1008134578E55518FFD9202020202020 about the need for TAR param.lfs, because I used 7zip on the windows, so that I used 7zip so that need for Linux of any kind. 10 Dec 2017, 09:48 #7 quote: Originally published as rizdroid First, thanks for sharing the information. I've tried, I've tried, Bones. It seems the B4000 in param.lfs I use (KI8) is not the beginning of JPEG. Tried other addresses that start with the FF D8, with and w/o Exif, but to no avail. All I have is an empty .lfs folder (as you said) and a message download saying logo.jpg draw failed, but it boots in the end. What am I missing? TIA param.lfs I use: EDIT: Wow! it took me a couple of hours, but I finally found it in that param.lfs (XWKI8) !!! The XWKI8 logo.jpg starts 7D800. Don't go beyond the length of the file you already have (in XWKI8, g/-15K), otherwise you'll get a draw failed download error and empty /mnt/.lfs - in this case, just reflash shares param.lfs and you'll be fine. It's working great! Now I can sleep! Once again, thx bunch of Ivan_Belarus for sharing information! Cheers! I know where the problem is I resurrected a really old stream, but (...). It's okay to ask questions even if the thread is so old, but unfortunately I can't help you. You have to find your time! Page 26 Hello: I open this theme in order to provide in one post all our SGSII current core, where you can download each one. To discuss and talk about them send where and opened the thread, please. I'll update as it comes out for the new versions. THANKS FOR ALL COOK Although it put in each one, now to load the core based on their expansion usually: - TAR: It flashes alone or with the Flash Core option from the CWM app. - SIP: It flashes out of the recovery menu. If you want to add or delete the kernel or whatever. Thank you. It is very difficult to achieve the same in every SGSII. It is best to try to stay with the one you like and fits your needs. Description: - Version: 2.1.3 - Date: 08/28/11 - SetCPU: Yes - OC: 1.600 - UV: Yes - BLN: Yes - Bootanimation: Yes Copyright Notes: Update for Samsung XXKG5 Source (Update2) Added GPU Watch Control Interface (currently has no GUI) Minimum processor voltage is being properly clamped on 800mV Misc settings and fixes, see github commit for the magazine cfs-exp for full information improve the use of the BLN battery. Changes made to touchpanel sensitivity when the phone is charged to solve problems on some registered user input when charging. BLN support added. Added RAM console (/proc/last_kmsg) Deprecated bigmem edition. Added additional VPN features. JHash has been updated to version 3. ADDED support for CIFS. The latest update to Samsung's source is applied to the base. The core base has been updated to 2.6.35.11. Acceleration to 1.6 GHz. Voltage control through SetCPU or Voltage Control from 800mV to 1500mV. The IO BFV2-r1 planner has been added and installed by default. Optimized EXT4 attachment options. Various other performance-related settings. Bypass edition As stated above, but with some patches applied to the bypass errata inherent in some Cortex A8/A9 processors. Hellcat Root Core (HellcatDroid) Citation: Links: XDA Thread Htcmania Thread (Spanish) Download: v1.22 XXKH3 (2.3.4) v1.22 XXKH1 (2.3.4.2.3.4) v1.22 UHKG7 (2.3.4.4) v1.22 XXKG2 (2.3.4) v1.22 XWKF3 (2.3.3.4) v1.22 XWKF (2.3.3) Uploaded to XXKH3 Summary: - Version: 1.22 - Date: 8/27/11 - SetCPU: ? - UV: ? - BLN: Yes - Bootanimation: Yes Copyright Notes: - The root core comes instantly rooted, after flashing this core your system remains unprotected (su, busybox and Superuser app). Nothing more needs to be done. Works root with ClockworkMod CWM 4.0.1.4 This kernel also comes with the restoration of ClockworkMod instead of the original runoff. ADB work root pre in recovery mode What loaded into recovery mode you have ADB available to connect to form your computer. ADB also whimpering with a full privx root in recovery mode. - Custom download scripts There are a few downloads you can put your own commands to perform during download. Scripts 'system/bootrc.sh and /data/bootrc.sh. The additional modules supported will also be downloaded during the download the original stream as it integrates them via the core, but because of the impact limits of the size of zImage I decided to have them loaded from external directories. Currently supported modules: (these modules are compiled together with the kernel and included in the download!) - slow-work.ko (not needed on Android 2.3.4 FWs, like XXKG2, e.t.c.) - cifs.co If these modules are present in any directory /sdcard or /data/lib/modules, they will be automatically loaded when downloaded and available for use (e.g. just get CifsManager off the market and start mounting your shares) To install, just create an import folder in your /sdcard/import/bootanimation.zip-bootlogo, put it in /sdcard/getin, and give it a name, logo.png-CPU acceleration to 1.6 GHz -GPU acceleration -BF ' v2-r1 -Removed other planners -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -CPU 5 -KI3 initramfs I use the hidden section p12 as a tmp, so if the bootlogo doesn't work, lemme fix it -Composed with AOSP 4.4.0 toolchain -BLN -Init.d support - /system/etc/init.d/ -EFS backup scenario -Touchscreenfix set at 5 - thanks to vitalij I's newish friendly, you can blink through Odin, and everything is set to flash it through Odin/ FD's Kernel (FrozenData) acceleration, BF V2-r1, BLN, touchscreen optimization and more in the future. I am inspired by Hacre, Chainfire and HellcatDroid. Hellcat is very kind, and helps me with former compilations of the issue. Also, Hacre was nice to join me, a former processor breaking of the code. But now further down the core, the functions of -Bootanimation support, it in /system/media/bootanimation.zip-bootlogo, put it in /sdcard/getin, and give it a name, logo.png-CPU acceleration to 1.6 GHz -GPU acceleration -BF ' v2-r1 -Removed other planners -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -CPU 5 -KI3 initramfs I use the hidden section p12 as a tmp, so if the bootlogo doesn't work, lemme fix it -Composed with AOSP 4.4.0 toolchain -BLN -Init.d support - /system/etc/init.d/ -EFS backup scenario -Touchscreenfix set at 5 - thanks to vitalij I's newish friendly, you can blink through Odin, and everything is set to flash it through Odin/ FD's Kernel (FrozenData) Citation: Links: Official links Download: Abyss Kernel 1.7 Abyss Core 1.6 Abyss Core 1.5 Abyss Core 1.4 Changelog: - Tutte le funzioni disponibili nel core Thunderbolt 3.1 - Aggiornata base 2.6.35.13 - Importato settima risparmio dough da Abyss core aoop - Inserito trick che tiene sotto controllo il Deep Sleep e Lo Forza dopogni o 5 sec. - Inserito OOH controllo dell cambio Brightness automatico con Sistema Disabilitato base 200 e 400 MHz L 350 e 300 MGц за ultinriore risparmio batteria -Fixato problema zamgozione elektronnoj uravli dell algo Bezdna 1,1 - Cambiata ottimizzazione del touch da Abyss core aoop - Inserito trick che tiene sotto controllo il Deep Sleep e Lo Forza dopogni o 5 sec. Remove bln planner that increased internal voltage @1600MHz for stability at some low UV values for cpu. Various improvements to the kernel itself. Ci SiyahKernel v1.7.4 copy efsbackup.tar.gz and efsdev-mmcblk0p1.img to safety. I hope you won't need them, but if you use the script change routing, is close the close the cut. All su and superuser.apk files are deleted (as well as related dalvik-cache), the device is rebooted. if you still have a problem with the superuser install / Updated recovery to CWM 4.0.1.5 (last stable) CWM flash version wipes cache and dalvik-cache. The final version included in the CWM flashable version. Author's Notes: Based on sources Samsung Update2 (deep sleep problem fixed, hopefully) compiled with gcc4.5.2 Auto-Root (just flash it in a rum warehouse, and you'll root you) ClockworkMod Recovery v4.0.1.4 Tweaks to SetCPU (OC up to 1600 MHz, UC downto 100 MHz) Supports dissatisfaction (UV between 800 mV and 1500 mV) supports Voltage Control through SetCPU (thanks to non-tarch, ninpo, hacre) Stock voltage as default smartassV2 governor default governor ondemand Governor Tweaked ondemand Governor Increased touch sensitivity Touchscreen fix (thanks to vitalij) increased internal survey of GPU watch battery and voltage management interface (thanks to netarchyarchy). Example CWM-flashable/system/etc/init.d/99gpuv script (thanks To AndreiLux) IO Tweaks automatic flashable options. Leave it connected to the charger overnight and the battery will still be connected. Available I/O planners: V (default), available CFQ (recommended and default), cfq-iosthed, bfq (recommended and default) - Boot (flashable cream), deadline planners BLN (thanks to creams), slight adjustable stream (thanks to simone, smartassV2 (recommended and default), performance/system/etc.init.d scripts support upgraded boot. SuperPower Ki3 update? SuperPower Ki3 Update! Author notes that the core of Netchip are worth, the color also worth a thousand and one error. Such a maximum acceleration to 1400 MHz, lack of GPU acceleration, bad scenarios. Scenarios that don't work, h'm easy, fast easy, not nice easy. And I came to introduce my new, easy, fast one fancy core. I will be the most ideal to ease the core. BF v2-r1 is a big drama, it's super fixed core Samsung, CPU maximum acceleration to 1.6 GHz, GPU acceleration, BF V2-r1, BLN, touchscreen optimization and more in the future. I am inspired by Hacre, Chainfire and HellcatDroid. Hellcat is very kind, and helps me with former compilations of the issue. Also, Hacre was nice to join me, a former processor breaking of the code. But now further down the core, the functions of -Bootanimation support, it in /system/media/bootanimation.zip-bootlogo, put it in /sdcard/getin, and give it a name, logo.png-CPU acceleration to 1.6 GHz -GPU acceleration -BF ' v2-r1 -Removed other planners -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -Instant -CPU 5 -KI3 initramfs I use the hidden section p12 as a tmp, so if the bootlogo doesn't work, lemme fix it -Composed with AOSP 4.4.0 toolchain -BLN -Init.d support - /system/etc/init.d/ -EFS backup scenario -Touchscreenfix set at 5 - thanks to vitalij I's newish friendly, you can blink through Odin, and everything is set to flash it through Odin/ FD's Kernel (FrozenData) MHz: 1350mV 1400MHz: 1200mV 1200MHz: 1100mV 1000mV 800mHz: 950mV 50 10 Hz 0 MHz : 950mV 200 MHz : 850mV Mirage S2 (NeoPhyTe.x360) Citation: Links: XDA Thread Download: SGSII-2.6.35.7-MirageS2-v5 Changelog: v5: Set samsung-update1 as base (fix reboot) added SLqb and HT policy Copyright notes: For XXKG1/G2/G3 (should work with seniors too) Modified range Freq 11 steps (200-400-500-600-800-900-1000-1200-1400-1504-1600 MHz) CP UV-Sysinterface (thanks to nppheamine) Modified cpufreq.c to make the processor go step by step, I think, prevents SoD (maybe a placebo effect) Reverse IO settings for smoothness OC/UV PUP Freq Range 7 Now (200/200/dmesg) 500/600/1100/1200/1400/1600 MHz) Supports BLN Touch Sensitivity to fix Vitmer CWM ROOT performance settings Using Samsung Update: OC/UV Power Control with SetCPU or Power Control: 1600 MHz: 1350mV 1400MHz: 1200mV 1200MHz: 1100mV 1000mV 800mHz: 950mV 50 10 Hz 0 MHz : 950mV 200 MHz : 850mV Mirage S2 (NeoPhyTe.x360) Citation: XDA Thread Thread.
