Epoxy floor with cereal I was on a mission to organize my garage. I got rid of tons of garbage, bought garage shelves from Costco, arranged all the tools, installed a bike rack, and I thought I did, but the garage floor looked awful. It had oil stains and large cracks. I wanted to renovate the floor since my wife and I work every day in the garage and I thought that after all the work I did to repair it, putting in the epoxy floor would be the finishing touch. It took two days for my floor to be installed. That's how they did it. The chopping floors of the floor grinderGrinding floors Of the garage was completely cleaned, they used an electric hand grinder on the floor. They land down some of the high spots and uniform areas around the cracks. The grinding process is essential for epoxy resin and the sealant will stick to the floor. For garages with more difficult cement, they may need a vertical (more powerful) grinder. After the floor was grounded, they used a high-pressure puck and cleared the entire floor. The guys worked very fast. Once they had finished washing the pressure they used squeegees to get all the water. This part of the process went very quickly. Filling large cracks in the garage floorFilling crack productSpeedFinish patch and finishing compoundTo fill the cracks in the garage floor they used a fast drying product called SpeedFinish. They smoothed the cracks and mixed them into the floor. They assured me that Epoxy would stick to the new cement by being absorbed while the finishing compounds dried up. The garage floor cracked before and after they were filled to the top before getting filled with a crack after getting filledapplying EpoxyThey started using paint brushes and painting around the edges. They then used rollers with long handles to finish putting it on. Picture on Epoxy4195 Epoxy4800 Clear EpoxyInability Epoxy VariesIn my research the quality of epoxy resin varies greatly. Initially I started researching vendors to put in the floor and found a few people through Yelp, since I felt that Home Depot products weren't going to keep up the hot tires on my car. On my floor they used two products that are priced for average industrial use.4195 Direct concrete epoxy resin They use this product because it contains a primer and it is designed to make plastic chips that give it a spotty look. NOTE: Chips look great, but what they really do is provide some texture on the floor, so it's not that slippery when wet. It is highly recommended to add a chip. If you don't use the chip, you should use another product. They used 4800 to seal the flakes. This product should be UV-resistant, although literature says it is soft Resistant. The installer said he would keep on a small lip that is exposed outside under the door of my garage. Spike shoePutting flakes on the floorThe half they used on my floor had a medium flake system. They wear these strap on spike shoes and walk around the floor while it is wet and at the same time they have been spraying flakes very easily by hand. It's amazing how even they were able to distribute the flakes. It was about 30 minutes after applying Epoxy paint that they started sucking the flakes on the floor. How long for Epoxy to dry? They drew Epoxy in one day, and the next morning it was dry enough to go on. If you think about it, it should be able to dry out one night because the next day they were rolling on the sealant. Sealing the floorS leave the garage door open all night to help the floor dry, they returned the next morning and painted Epoxy sealant (4800 clear epoxy resin) over the first coat and chips. I asked them to wear a thick coat because it would make the floor a little smoother. We workout in our garage, so I don't want the floor to be too rough to touch. A few things to know about the Epoxy floors in your homeIf you are going to put an Epoxy floor in a garage or house a few things you need to know. First, the products in this hub are for garages. Research what foods are best prepared for inside the home. Secondly, the chemicals used in Epoxy smell very strong. Our house sits above the garage and it could make it worse. If you like to inhale fumes, I suggest making sure the house has a lot of fresh air or stay away from your home until it is installed. The quotes vary greatly. We have quotes, too. One was from a national network called Premier Garage and the other from OTEpoxy in the Bay Area. The premiere garage was \$5 sq ft with chips while OTEpoxy was \$3 sq ft. Before the word was done with EpoxyNo EpoxyAfter Epoxy PicturePoli Epoxy When can we walk on it and ride it? So now that we have a fresh floor in the garage, the question is, when can we use it? The day after the sealant coat is applied it is normal to walk on it, but do not drive or heavy machinery on the floor. Five days after the sealant coat is applied it is normal to ride on with the products used for this floor. The timing varies depending on the type of Epoxy and sealant used on the floor! Recently completed Epoxy garage FloorEpoxy garage FloorShould I install Epoxy floor itself? The products used on my floor are probably a few hundred dollars of materials. I watched them make a call and I could do it, but it would take me a lot longer to do. They had three guys working about two or three hours a day who were very effective. In addition to TheGrinder Pressure Puck Spike shoe brushes and rollers they had several other tools that most people don't have. I think I'd have to. four to five hundred on additional tools. A good cement grinder can easily cost more than \$300. So, say you have the tools. Then it all comes down to self-esteem. You have the time and I strongly considered doing it myself, but eventually I hired OTEpoxy, and I think they did a great job.) This article is accurate and true to the best of the author's knowledge. Content is only for information or entertainment purposes and does not replace personal counsel or professional advice in business, financial, legal or technical matters.CommentsExtreme Epoxy Coatings from Fresno April 30, 2018: I evaluate the details in this article. Well written, and so is the point! Paul Edmondson (author) from Berlingeme, California, March 22, 2013: I think they will use another product inside the home. I think this thing is pretty toxic. They wear gas masks when they apply Epoxy sealer.gredmondson from San Francisco, California on March 22, 2013:I Love the garage floor now! It was a good choice of color. Did you also make a nearby pantry? How would this floor make INSIDE home? Paul Edmondson (author) from Berlingeme, Calif., March 22, 2013: I will not use a product from Lowes. Industrial products will last much longer, although they may be more difficult to apply. I have to say, I like the way the floor looks in South Florida on March 22, 2013: What a difference, Paul. Like day and night. Thanks for the info. And illustrative photos. Jeannie of Arlington, Va., March 22, 2013: Outstanding. I want to do this on my garage floor but have thought about using products from Lowes. I didn't know about the industrial app, but I'm now.moonlake from America March 21, 2013: Paul looks great. What a good way to finish the garage. Voted and more. Choose a nice, dry weekend, get the materials you need, and you're ready to turn your oil-stained, concrete garage floor into a brilliant masterpiece that can rival your marble kitchen counters. In addition to the beautiful, epoxy resin coated floor is also oil resistant and easy to clean. First, carefully sweep the garage floor so that the epoxy resin will bind to the concrete; The old brush works well to clear the corners. When you think the garage floor is as clean as you can get it, stick a wide piece of tape on the floor to see if there is dust or dirt on it when you take it. Any holes or cracks in the floor should be fixed and you should let the patch dry well. If the garage floor has been painted, rubbed with old paint, sweep away the trash, wash and scrub the floor well and let it dry. Advertising The next step is to apply the etching solution to the floor, following the instructions on the container. Scrub each section back and forth and from side to side, then rinse off the solution and let the floor dry for at least four hours. When you are sure that the floor is dry, stir can epoxy paint, slowly adding epoxy hardening. Mix for three minutes, then let sit for half an hour. Now you have to move fast. Depending on the The epoxy resin you use, you have 20 minutes to two hours to cover the entire garage floor, starting at the back corner, so you can get out without leaving the tracks on the floor. If you want colored flakes, scatter them by hand as you finish painting each section. Allow the floor to dry for 12 to 24 hours; Then prepare the top coat as you have prepared the epoxy resin (mix for three minutes, etc.). Paint on the top coat, from back and forth, from side to side movement for each section, then let it dry for 24 hours. Wait 72 hours before bringing your car to the garage. Creating an epoxy-coated garage floor works, but the results are worth it. Your garage stores thousands of dollars in vehicles, tools, and who knows what else. Give it some love by installing a protective epoxy floor covering in just a few hours. The eroxide coating brings the salon look home, but also serves a functional purpose: it resists oil stains, water beads and is easy to wipe clean. Adding paint chips can hide the imperfections of the floor and anti-skid supplements will give you more grip on wet and snowy days. Conversely, if you live in a very hot climate, you should be sure that epoxy resin can withstand hot tires that can lift epoxy resin from the floor. It's all about preparing when installing epoxy coating. Regardless of the price, an expensive coating can chip and peel if it is not fitted correctly. Manufacturers instructions on installing their epoxy resin can vary, but make sure you continue to follow each step just as listed. Here are some of the steps you'll need to follow, along with a few tips. Step one: Preparing SpaceAll objects to be cleaned from the floor and the area should be carefully swept. Use a sheet blower at a low level to remove hard to see dirt and particles. Tape your gray, steps and edge of your garage floor to limit where the epoxy cover is. G/O Media can get a commissionario Kart Live: Home chainIf you have any large chips or damage to your concrete floor, you will need to repair these first. Use a heavy degreiser and scrub brush to remove all oil and gas stains from the floor. When you're finished cleaning, rinse all the soap and dirt away. Finally, apply citric acid and concrete grass, which creates tiny grooves in the floor for the epoxy resin to stick to. Some people use suriatic acid, but these are very corrosive and toxic chemicals. You've been warned. Give your floor a final rinse with a washer pressure, or just rinse with a hose and water, then wait for the surface to dry completely. Step Two: Apply Epoxy Mix two epoxy chemicals together and immediately Start applying the mixture to the floor. Start by finishing the areas first using 2 brushing and then covering the floor with a standard roller of paint and 3/8 sleep. The roller extender is useful for this work. If you use paint chips, substitute them on epoxy resin after it has been applied to the floor. Don't mix it in Only one coat is required. The gallon should cover 200-250 square feet. Here's a tip: Don't apply on a windy day or you'll get twigs, leaves and other contaminants blown over new floors. Step three: Let it dry depending on the temperature and humidity, the epoxy resin floor will dry to the touch for a few hours, but wait all night before walking on it. Epoxy floors need extra time to completely cure. Check the product instructions, but the usual treatment time is 3-7 days. Popular garage floor epoxy resin sets include Rustoleum for \$99 and BEHR for \$78.Photos courtesy of Charles and Hudson. Hudson. rust oleum epoxy garage floor kit instructions
