Winter motorcycle gloves are an essential kit for powerful souls who dare to walk at this time of year. But with so many different styles and materials to choose from the selection can be amazing. In this purchase guide we will break it down for you. First we will see the main things you should think about when buying a pair of winter motorcycle gloves. Then we'll review some of the better gloves available to riders this winter. As always at Begin we've seen winter gloves that offer the best balance between price and quality, although we recommend spending a little more on your gloves as they are the most important part of safety gear after your helmet. Our advice is to spend as much as you can afford on a good quality pair that will last for years rather than buying a cheap pair that will leak water and offer little protection if you drop the bike. Also worth considering are electrically heated gloves, they tend to be more expensive but the technology has come a long way in recent years and they are quite reliable. Read our guide to the best heated motorcycle gloves. Our Best Winter Gloves Are Encouraged for time and just want our top recommendations? Look no further than Richa's Arctic Textile Waterproof Gloves. They are warm, waterproof and offer great protection. How do they protect me from cold, wind and rain? Let's take a more detailed look at these factors and decide which is most important. Leather vs Textiles As a general rule of leather has better abrasion resistance than humans making textiles. In simple terms this means if you come off the bike, the skin will protect your hands when in contact road surface. The skin will also tend to fit more as it is more chewy than man-made fabrics and molds to leaner fingers. Top end - remember stretching the skin as you wear it, so go for a slightly tighter fit to allow this. While leather is a classic choice, man-made materials have advanced greatly over the past few years and can continue to continue Advantages: Better weather resistance Sometimes cheaper Can be cleaned more easily - it is often safe to wash machines Because technology has improved textile gloves have become a serious alternative to leather and many gloves actually contain a mixture of man-made materials and leather to provide the best of both worlds. For an in-depth look at the pros and cons of leather vs textiles on general motorcycle safety equipment see here. Fit It is very important to get the glove match right. This is especially true with winter motorcycle gloves because the extra thermal pads and waterproof can be large. You are looking for a fitting (not tight) that leaves some room for finger movement and allows the use of unobstructed bike controls. Too tight and gloves can limit your circulation and create numbness in the fingers - not good for control! Too loose and excess baggy material can interfere with bike control or even worse gloves can come off completely in an accident, your expensive hand protector is not much good for you if 100 meters down the road. Following on from this, always go for gloves that will stay safely in place if you come off the bike. Look for the D-ring or velcro retention strap on the wrist. Take a look at the first part of this video for the correct glove size information. It's American but covers the basics well. Good Glove Protection should offer shield protection for knuckles, fingers and palms. All stitches should be sewn tightly and look for double stitching and reinforcement in the high impact area of the glove. Armour Protective armour can be divided into two general categories: Soft Armour - usually made of closed cell foam designed to cushion and absorb energy from hard armour impacts - is usually made of hard plastic or carbon fiber and is designed to fit soft armour, provides extra impact protection and is an extra line of defense against wear. Palm (scaphoid bone) Pay special attention to the protective palm bone or scaphoid, the natural human reaction to falling or falling is to put the hand out to protect the head. It is common for palms to take full force out of impact on the road and many motorists have found that palm protection is more important than knuckle armour in the event of an accident. The scaphoid protector is highlighted in red. Knuckles and Knuckles and knuckles must be protected by hard or soft armor. Wrist Find long gloves with gauntlets they will cover and protect the wrist, also very useful for keeping the cold weather out (more on this Also as mentioned earlier but worth repeating, check if the glove has a strong fastening around the wrist to keep it safely in place in an accident. Waterproofing Leather gloves and motorcycle textiles can be effectively waterproof. This is achieved by membranes behind the outer fabric or leather. Ideally the membrane should breathe, sweaty hands become irritated very quickly. There are three broad categories of membranes; Gore-Tex – offers the highest level of quality and is the most breathable membrane. Not surprisingly it's also the most expensive. You're unlikely to find Gore-Tex in gloves under the brand's £100 special membrane - brands such as Alpinestars and Dainese offer their own membranes, these are of high quality and close to other Gore-Tex levels - the most common membrane you'll see is Hipora especially in cheaper gloves. It's worth the price but won't perform as well in very heavy weather and offers less warmth warmth Anyone who has risen in winter knows that wind chills are a serious factor. Cold can cause your hands to become numb and stiff, not good when trying to use bike controls. Find gloves with a thermal coating. Most of the cheaper ones will have thinsulate layers (the same thing as the usual winter gloves you're made of) , the more expensive ones may have a three-layer coating that will trap more air and provide more warmth. While Thinsulate should be adequate in normal UK winter temperatures, it doesn't do the job if it gets very cold. One solution is to wear extra thin gloves inside the motorcycle gloves to provide an extra layer. Additional Lap Visor features can be seen on the index finger. (click to enlarge) Some gloves offer additional features that are not important but can be useful; Visor removal - some gloves come with plastic or suede inserts on one of your fingers or thumbs, very useful for cleaning rain from the touch screen capabilities of your lid - using conductive threads sewn into the fingers. Allows you to use your smartphone without removing your gloves Review Allows digging into our top picks. Richa Arctic Textile Waterproof Glove A great all rounder in the mid-price range. Hard armor to knuckles and soft armor to the palms, wrists and fingers. Check Price in SportsBikeShop These gloves are very warm and have an impressive amount of waterproofing, staying dry even in the bleakest British weather. Pros: Palm, finger and wrist soft armor Knuckle hard armor Very warm Best for waterproof Less large than most winter gloves Visor remove Cons Sizing is on the small side - probably worth ordering size until Check SportsBikeShop Check On Amazon RST Blade Waterproof Glove This is a sportier glove in medium price. It offers fantastic protection with carbon fiber knuckle protectors, finger joint armour, and soft armour with skin reinforcement in the palm of the hand. Check Price in SportsBikeShop Strong nylon bound seams make waterproofing superior and keep your hands warm in all but the harshest weather Pros: Palm armour and Knuckle reinforcement, finger hard armour Premium grad A A Breathable construction Sinaqua waterproof membrane nylon seam Double wrist and cuff closure Counter No visor lap Check SportsBikeShop Richa Carbon Winter Gloves If you are on a tight budget then this is the cheapest pair of motorcycle gloves we recommend. Check Prices at SportsBikeShop They score pretty well on the three main benchmarks of warmth, waterproof and protection. Will work best for short trips. Their limitations will become apparent in heavier weather. Pros: Palm reinforcement Knuckle, finger armour Comfort thermal lining Solid velcro wrist strap Reasonable waterproofing Cons Not the warmest No hard armour Visor wipe does not work properly Check SportsBikeShopCheck On Amazon Spada Enforcer WP Gloves Warm and comfortable gloves at the lower end of mid range price. Check Prices at SportsBikeShop These gloves excel in their level of protection, with hard armor knuckles and soft armor with leather reinforcements in the palm of the hand. They also have a very useful plastic visor wipe on the left thumb and it really does a good job in removing rain from your lid. Pros: Palm armour and reinforcement Knuckle, finger hard armour Thinsulate breathable lining Hipora waterproof membrane Velcro wrist strap adjuster Visor wipe on left thumb Cons Breathability is not good - can sweat Stiff enough until worn in SportsBikeShop Check Amazon Conclusion We have two main recommendations for your winter motorcycle gloves. If your top priority is hand protection and armor then RST Blades is the perfect choice. If you are looking for the best in warmth and weatherproof then go for Richa Arctic gloves. One set of gloves will perform very well in the UK climate and should give you a good service over the years. All images via SportsBikeShop. SportsBikeShop.
