Unlike Google Stadia, GeForce Now lets you connect to a remote PC and install games you've already purchased on Steam, Uplay, Battle.net and other digital platforms. This makes it an attractive alternative for those who have extensive libraries and insufficient equipment. To make the service even more attractive, Nvidia announced that GeForce RTX servers are rolling out today in Germany, and very soon in Northern California. Additional servers will open in Japan and Korea later this year. This will bring incredible performance and advanced ray tracking technology to the cloud gaming service. Combined with low 5G network delays, Nvidia claims that this makes VR and AR possible on almost any device. Related: Google Stadia vs. GeForce Now: Which cloud gaming service is better? The beta version of GeForce Now will end in a few months, so be sure to sign up now if you want to try the service before it is released to the public.
