Music lovers who would like to visualize their favorite songs should try using audiovisualizer apps that turn sounds into beautiful images and make the process of listening to music from a smartphone even more enjoyable. Continue reading, if you want to learn about the best music visualizer apps for iPhone and Android devices. Top 10 FREE Audio and Music Visualizer Apps for iOS and Android Adding background music, sound effect or voiceover will make the video more appealing. Download Filmora9 video editor to try. There are several factors that you should consider before deciding to download and install a music visualization app on your smartphone. The number of different features an app offers, its size or price can be important factors in choosing an audio visualizer. Let's take a look at the top ten music visualization apps you can find on the Google Play Store and App Store. Price: Free compatibility: Android 4.0.3 and later user rating: 4.2 Apart from being a powerful music visualization tool, this app is also a music player that allows you to sort music by genre, playlist or artists. AudioVision offers six different visual skins that are fully customized and offer almost endless visualization capabilities. You can fine-tune the sensitivity settings, bar and width of the border or color settings, so that they best match the genre of music you are currently listening to. The app is only 1.6MB in size, which means you can use it to visualize music and create stunning screensavers, even if you don't have a lot of storage space on your phone. Price: Free, but the app offers in-app Purchase Compatibility: Android 4.1 and Up User Rating: 4.1 Android users need an app that allows them to organize their music or create seamless transitions between tracks will love Avee Music Player Pro. The app's customizable audiovisualizers gives you complete creative freedom, so you can experiment and try out different combinations of settings to get the perfect visualization of the songs you're listening to. Avee also allows you to export video visualizations of music in HD quality, and you can use it to create videos for your YouTube channel or just enjoy the stunning visuals that it Price: Free Compatibility: Android 2.33 or above Immersing yourself in music is easy with this Android app because you just have to choose a song and choose one of 11 different renders. You can choose from options such as shiny particles, colorful orb orb or digital equalizer to turn sounds into moving images. Activation Activation or Live Wallpaper modes will allow you to create visualizations for other players, but you should keep in mind that Snoop mode may not work properly on all versions of Android. In addition, you can also control the gesture app or control the app externally, but you can save the video you create using Music Visualizer. Price: Free, but the app offers in-app Purchase Compatibility: iOS 11.0 or later user rating: 4.1 Shuffling visuals, control noir, shade or contrast colors are among the few features that the STAELLA app has to offer. There are several visual packages available, but you can only access them if you make a purchase in the app. Using STAELLA is surprisingly easy since you just have to choose a song and enjoy the visuals the app creates. The audio-reactive system the real-time app uses, generates images from sounds almost instantly, and if you decide to purchase a Pro version of the app you will also be able to record all your music visualizations and save them as GIFs or MOV files. Price: Free, but the app offers in-app Purchase Compatibility: iOS, Android User Rating: 4.4 There is very little doubt that you will have incredible visuals on your mobile device if you decide to install this music visualizer. The Alien Worlds app allows you to choose from 47 radio channels that play different genres of music, such as rock, techno, trance or ambient. His musical visualization is always unique. This means that every time you use the app the effects that you see will be different. In addition, there are more than a hundred settings available that allow you to customize and customize visualizations almost the way you want. If you want to access all the features of the app, you'll have to upgrade to a premium version that costs \$1.99. Price: Free, but the app offers in-app Purchase Compatibility: iOS, Android User Rating: 4.1 This app is aimed at music lovers Trance, as it allows you to listen to over thirty radio channels that play this genre of electronic music, as well as seventeen more that play different types of music. The Trance 5D app can be connected to TVs via AirPlay and has a battery-saving feature that makes it ideal for larger sides. There are 22 music visualization themes to choose from that you can use with all music players developed from iOS or Android OS. However, some of the app's features are only available if you buy a premium version of the app. Price: Free Compatibility: Android User Rating: 4.7 Have You Ever Heard a Song You like, but you haven't had a chance to know his name or the artist's name? The Beatfind app is just like the Shazam music recognition app, but with audio visualization options, as it allows you to discover new music a few minutes after you hear it for the first time. Music Recognition Mode, which uses Cloud technology detects a song if the app is active and next to the speaker. The app's music visualizer relies on the phone's microphone to collect sound data and synchronize visual effects with sound input. However, Beatfind does not provide tools that allow you to customize or record your music visualizations. Price: Free, but the app offers in-app Purchase Compatibility: iOS User Rating: 4.2 This is ideal for all iPhone users who want to have almost complete control over the process of visualizing their music. The best part is that the Trapp app allows its users to play their creations while they are using the native iPhone Music app. You can change background colors, create custom particles by adjusting their shape, size and color, or play around with Bass Effect in order to create stunning sound visualizations. The free version of the app provides only limited functionality, and you must choose a monthly or annual subscription plan to use all the features of the app. Price: Free, but contains ads on the Google Play Store, \$2.99 on App Store Compatibility: Android, iOS User Rating: 4.1 iOS and Android versions of the ProjectM app have one major difference. The iOS version of the app contains a built-in media player, while the Android version doesn't come with a media player. However, both versions of the app offer powerful sound visualization features that allow you to create visuals from music in a variety of styles. ProjectM is probably one of the best music visualization apps for android and iOS oprating systems because it contains hundreds of visual effects, multi-sensory interactive visual effects, and it provides Support for Chromecast. There are also several different modes such as the immersion mode for KitKat devices or the Live Wallpaper mode, which creates animated wallpapers for your smartphone. Price: Free, but the app offers in-app Purchase Compatibility: iOS User Rating: 4.4 Tunr combines streaming services with music visualization options to create a unique experience for all its users. You can use streaming platforms such as Spotify, SoundCloud, listen to music from your iTunes library, or listen to Internet radio stations. In addition to providing access to various streaming and music platforms, Tunr also gives you control over visual effects and user interface elements. The free version of the app offers only basic music visualization features, and you have to make purchases in the app to take full advantage of Tunr's sound visualization options.
