What does root mean? In any case, whether it's android, web hosting or other similar activities, root access means access to a core part of the system. This means if you get root access to any system, you can do whatever you want to do with that system. For example, on this site, all you can do is view posts and comment on them, you can't edit posts and delete them because you don't have root access to my server. It's similar to android, On android all you can do is install and delete ONLY the apps you download from the play store and see only the data, files and folders that allow you. But, if you get root access, you delete any application you want, and see hidden files and folders. You can also install different types of applications that provide amazing features such as Titanium backups, link2sd, Greenify etc,which you can't install on unrooted devices. Q. If I root my device and then after a while unplug it, will my warranty continue? Ans. Yes, your warranty will continue because know that you have rooted before. Q. People say rooting is dangerous. Should I do it? Ans. It's up to you to decide. Actually some people brick their devices during rooting and now you can also root your device with a 100% safe method. So I think there's not much to worry about, but if you're afraid so much, please google if people get the error when rooting for the device you're using. Q. WHY SHOULD I ROOT MY DEVICE? 1. After rooting your phone, you can remove some software from the system. There is no installation option in the software management inside the root. But after rooting, they can match some file management software to remove system applications on your phone. This can help save memory space on your phone (suitable for lower-end smartphones). 2. Some applications must have root access to open their functions. For example, Titanium Backup has amazing features that can Back up data as well as apps/games. However, to use this feature you need root access. 3. Some of the top android optimized android software such as towelroot need rooting help to achieve the best optimization. Like some small functions should be used through the root. Root.
