Package Name: free.vpn.unblock.proxy.turbovpn Version: 3.3.5 (2020092510) File size: 11.2 MB Updated: September 30, 2020 Minimum version: Android 4.1 (Jelly Bean, API 16) MD5: 9460a245d1096cbaf83782b0c9db6933 SHA1: d36fb7ef53b064dca8b5f1e06cc840666998d62c Privacy Protection and Custom Experience New Protocol To Improve Speed  
Fast Security VPN TurboN Is the Fastest And Free VPN which allows Android users to protect their online privacy and WiFi hotspots and bypass local privacy and school firewalls to access content which they want anonymously. Turbo VPN is the main function :\* unlimited number of free VPN services. Why choose and trust Turbo VPN? Free world-class servers and streaming servers: You can enjoy unobstructed browsing while ignoring local restrictions or school firewalls. Fast VPN Speeds: Improve search, streaming or download. Best Private and Secure VPN!User Conditions at home, school or office: Downloading and/or using this product is considered to be consistent with the End User License Agreement and Privacy Policy. political considerations, the Service is not available in China. We apologise for any inconvenience caused. The Turbo VPN download is so simple that it only takes 2 minutes to install on your phone. It provides a simple configuration, so even newbies with a VPN can choose the server of your choice and connect. Ads included in the app are displayed at the bottom of the screen, making it easy to ignore. The ads you see are not offensive It's a little annoying. There is a rabbit icon in the center of the interface and you can access the list of servers by clicking on the top right corner. However, there is nothing you can do other than switch between connected servers. However, you can activate the switch, which connects automatically when you run the Turbo VPN app. However, when using the automatic connectivity feature, we identified an error that automatically activated the application and contacted any server. It was quite difficult to disable this feature, but it was a bit complicated. Sometimes the application has a problem connecting to the chosen server. This is a major technical problem and is usually related when we have tried more than once. We easily connected to the BBC iPlayer and watched high-quality videos. However, there was a problem connecting to Netflix in the United States. Netflix does not allow VPN connections to protect blocked content. Privacy is a major issue for all VPN services. Turbo VPN's privacy policy defines a strict no log protocol. However, the privacy policy is not extensive and collects your basic information, and if you lose your connection to the server, the information collected will be deleted. However, the policy collects information about your activity and location when using the service. It's a little confusing. It takes a lot of permission to run your app. So I'm very curious about the privacy details. Overall, Turbo VPN is a simple VPN service that supports iOS and Android. It offers fast speeds and access to streaming services, but that's not impressive. This is recommended for beginners with VPNs who only use streaming features. 1 3.3.4 11.05MB 1 3.3.2 10.85MB 1 3.3.1 10.85MB 1 3.2.11 10.85MB 1 3.2.10 9.78MB 9.78MB install turbo vpn on android box. turbo vpn for android tv box
