Does NordVPN work in China? While most VPNs don't work in China, there are a few, including NordVPN, that do. We will cover China's restrictions in more detail, and explain how to use NordVPN in China, including important advice for iPhone users. Expert tip: While NordVPN works great in China, the NordVPN site is blocked. If you are traveling to China, this means that you have to register and download a VPN before you travel. **READER DEAL:** Save more than 70% on NordVPN Most countries use some form of blocking to restrict access to sites hosting illegal materials. The problem is that China has far stricter restrictions than most places. It blocks very popular sites such as Facebook, Wikipedia, Twitter, Google (including Google Docs and Drive), and YouTube. This makes it difficult for travelers to stay in touch with their friends at home, but also cuts off the supply of neutral information about the country, and makes it difficult to work as part of the international team. You can bypass these restrictions and access the Internet as usual, however by connecting to a VPN. They encrypt your internet traffic and route it through server locations elsewhere in the world. This not only allows you to circumvent Chinese internet censorship completely, but also prevents your ISP and government from monitoring your online activities. How does NordVPN bypass China's Great Firewall? NordVPN is one of the few VPN services that operates reliably in China. There are a few tricks it uses to avoid detection: first, it doesn't offer any servers in China itself. This means that NordVPN is not required to comply with China's complex data storage laws and eliminates the risk of government interference in the service's equipment. Second, NordVPN offers confusing servers. They are specifically designed for use in countries with severely restricted Internet access. NordVPN is understandably hesitant to explain how these servers circumvent government-imposed restrictions. However, this probably involves masking the user's internet traffic to more resemble regular HTTPS actions. Just changing your IP address is not enough in China. How to use NordVPN in China NordVPN's main website is currently unavailable in China. Customer support can direct you to a working mirror site (which is just a copy of the main website available from another URL). It is worth noting, however, that they can be taken offline at any time, so the best course of action is to register and install NordVPN before you arrive in China. **ANSWER:** NordVPN Review iOS users can still use the service in China to manually customize the IKEv2 connection, but the easiest way to get on Windows, Linux, MacOS and Android is the use of a tangled server. To turn them on, open the NordVPN app and click on the Settings option in Then scroll to the bottom of the list and click Show Advanced Settings. You'll see a warning, but just click on the button I know what I'm doing. Now find confusing servers in the list and click the switch button to turn them on. If you go back to the app's home screen, you'll see the Obfuscated Servers option at the top of the list on the left side. Clicking on it will automatically connect you to the best server location, but you can also choose from a specific country by clicking on the three-point icon on the right. Once connected, you can browse the Internet as usual. If your chosen server doesn't work, we recommend trying it elsewhere. If you are still having problems, customer support should be able to help, either by specifying a server that is still working, or by providing instructions to set up the device to use tangled servers. Support is available 24/7 in the chat, and if they can't solve your problem, you can use The 30-day NordVPN refund guarantee to require a full refund. Why is China blocking certain websites? Allegedly, China's Internet restrictions are in place to protect its citizens from harmful materials or ideologies. However, these restrictions often grew in the realm, with a particular focus on censored news or opinions that cast the Chinese Communist Party in an unfavorable light. In particular, section 5 of the Regulation on Computer Information Network and Internet Security, Protection and Management (1997) considers it a crime to use the Internet to tell lies, distort the truth, spread rumors or injure the reputation of public bodies. The problem here is that this wording seems deliberately vague: it does not indicate that any rumors are released, for example, it means that everyone, from journalists to celebrity gossip publishers, risks being prosecuted. Which sites and online services are blocked? While it is impossible to know exactly how many pages are censored in China, recent estimates put the number of blocked domains around 10,000. Below we have listed some of the types of online content that may not be available from mainland China: social networking sites (Facebook, Twitter, Instagram) Message sites (WhatsApp, Snapchat, Gmail, Slack, Telegram) Streaming sites (Netflix, YouTube, Twitch, Spotify) News sites (BBC, NYTimes, The Guardian, Reuters) Neutral sources of information (Wikipedia, quora, Scribd) Cloud storage platforms (Google Drive, Google Docs, Dropbox, Mega) Search Engines (Google, DuckDuckGo, Yahoo) VPN in addition, they even basic basic how a VPN works. Many VPN providers lack the time and resources they need to find a workaround. This means that the list of VPNs that work in China is getting shorter all the time. Currently, there are only a few services (except NordVPN) that can securely connect: ExpressVPN, Ivacy, StrongVPN and VyprVPN are some examples. It is important to note that all websites of these services are blocked in China, however. Some services have official mirror sites installed to allow you to access when in China, this is not guaranteed. Therefore, we strongly recommend registering with a VPN provider and installing the software before visiting the country. See also: Does ExpressVPN work in China? China VPN frequently asked VPN questions will always slow down to some extent (usually around 30%). However, you can expect slower speeds than normal speeds in China. NordVPN has confusing servers capable of bypassing the Great Firewall in many countries, so delay should not be a problem at least. NordVPN has an automatic kill switch. Better yet, it can be configured so that when your connection drops, it only stops sending data to specific applications. This is useful, for example, if you want to make sure that the download is not interrupted and you are not worried about privacy. NordVPN is a supplier with zero logs. In other words, it does not store connection logs, activity logs, IP addresses, log time tags, or bandwidth data. This means that NordVPN cannot disclose details of your activities, even if at the request of government.iPhone users can still connect to NordVPN in China, but as confusing servers are not yet available in this version of the application, they must set up the IKEv2 connection manually. Relax: it's actually much easier than it sounds; Here's a step-by-step guide to using NordVPN on iPhone in China. Although VPN use is severely restricted in China, it was not immediately banned. After all, companies use VPNs all the time so that international employees can safely access the common intranet. However, China only allows businesses to use approved VPNs. As a result, VPN apps cannot be downloaded from stores as in other countries of the world. China's VPN laws are extremely complex, and the user experience varies from one person to another. We strongly recommend to familiarize yourself with the relevant legislation before trying to use a VPN when in China.If you are in China already, there is not much you do if your VPN's website is suddenly blocked. So it's best to take the initiative: before you arrive in China, we recommend making a note about alternative URLs, support email addresses, and manual connectivity processes for your device. Think about how you'll store it this if your VPN suddenly derails, you won't be able to access cloud storage or messaging sites. Ideally, the relevant information is stored in a locally stored encrypted file on a password-protected device. If you are heading to China soon and are not sure if a particular website will be available, you can use our Great Firewall tool to check in advance. However, the list of blocked websites is updated frequently. Therefore, there is no guarantee this site will still be available when you arrive. Related: NordVPN review NordVPN coupon NordVPN vs ExpressVPN NordVPN is a great VPN provider - easy to use, secure, and packed to the brim with well-designed and implemented features. This is the reason why he so consistently gets the highest review score he does. Among the many things NordVPN offers is server obfuscation, a feature that many of us don't use and maybe not even necessarily clear. This can, however, be a very useful tool. In a nutshell, obfuscation is a method VPN uses to hide your traffic and pretend that you are not using a VPN at all. And NordVPN implementation is what I'm going to cover in this article. Read on to find out what NordVPN confuses servers, what makes them special, why and when we should use them, and how to turn them on (or turn them off) when needed. What is The NordVPN Obfuscated server? Server obfuscation is a technology that NordVPN uses to hide VPN traffic. Often called VPN camouflage or stealth VPN, obfuscation does not change any of the sent data. Still encrypted, as always. Instead, obfuscation makes the VPN connection hidden. The tangled NordVPN server does its best to make your VPN look like a typical, insed Internet activity - such as secure HTTPS traffic. This makes it much, much harder for anyone to discover that you are connected to a VPN and do something about it. Why use confusing servers? We use tangled servers to prevent VPNs from being blocked and filtered. When we connect to a VPN, the data we send and receive is encrypted. This makes it impossible for anyone who sees what we are doing online - what websites or services we use or what information we upload. For this reason, vpN use is highly restricted or prohibited in many parts of the world, such as China or the Middle East. Using one prevents providers and governments from accounting for our online activities and from censoring information we have access to. is an unlimited, censored online experience and better online privacy no matter where in the world you are. Here's NordVPN's take on it. It's also not just a part of the world run by repressive governments where obfuscation of the server will come in handy. In B Western countries, some schools, jobs, and sometimes even libraries and cafes try to prevent the use of VPNs. Confusing servers are a great tool to get around these blocks as well. How do I turn on NordVPN's confusing servers? Because the vast majority of NordVPN users don't need to use confusing servers, access to them is disabled by default. But turning them on takes only a few clicks. Before you can do this, however, you need to first do the following: With the app running and you log in, you can now turn on the obfuscation server. I use a Windows client as an example, but the process is almost identical on all platforms. The process of shutting down NordVPN's tangled servers is almost identical. The only difference is step 4, where instead of turning on the obfuscation, you disable it. Note that confusing servers come with extra overheads, which means they can slow down the internet speed for what a regular VPN connection does. So if you don't need to, you may be better off sticking to regular servers. NordVPN Server Obfuscation Doesn't Work? While it's extremely rare that one of NordVPN's obfuscation servers doesn't work properly - it's something I've personally never experienced - it can happen. Technology, after all, is technology. If you're working on a problem, here's a list of things you can do to fix this: NordVPN's Obfuscated Server Places 14 of the 59 countries that will cross the NordVPN server list to run confusing servers. There are currently a total of 152. You can take advantage of VPN obfuscation in the following places: Country Number servers Canada 4 France 12 Germany 6 Hong Kong 7 Italy 2 Japan 4 Netherlands 6 Singapore 50 Sweden 2 Switzerland 2 Turkey 1 United Arab Emirates 4 United Kingdom 6 United States 46 How to connect from internet-limited countries If you know you will be spending time in China or another country with internet restrictions Ideally, you should set up the NordVPN app before you arrive - you may not be able to download it there. However, there is another way to access one of the provider's confusing servers if you are already at your destination. NordVPN offers convenient communication guides from limited countries without a customer - detailed steps are available for Windows, macOS, Android, iOS and Linux. The methods are a little more involved, but help you and works. Once you connect to a confusing VPN server, you should be able to download the app as usual. The final thoughts are few VPN providers are doing online privacy better than NordVPN, and their server obfuscation technology is a big part of this puzzle. If you are in a country where VPN use is prohibited, or in one of the schools or workplaces where overzealous network administrators block VPNs, the tangled NordVPN servers can give you the access you want. They're Them A great tool in our arsenal that ensures that we always have unlimited and private access to the internet we all deserve.
