Many times, you will receive a discount due to the arrangements made for our visitors. I will never promote something I personally do not use or recommend. Buying through my links is directly compatible with TROYPOINT which keeps the content and tools coming. Thank you! This guide will show you how to install Mouse Toggle for Fire TV, Firestick and Fire TV Cube. If you side-loading apps on your Fire TV Stick, Fire TV, or Fire TV Cube, you've probably noticed that some of them don't work well with your remote control. The reason for this problem is because most Android apps are not developed for TV. They are intended to be used on a phone or tablet where the user is using their finest to navigate instead of a remote control. You can install Mouse Toggle on your Fire TV or Fire TV Stick which will allow you to browse these apps. Once you double-click the play button on the remote control, a mouse pointer appears on the screen. You can then use that pointer to click multiple items within the applications you are using. Most Android TV Box owners do not need a utility like this due to the fact that their remote control has a mouse option on it. How to install Mouse Toggle For Fire TV or Fire TV Stick Guide Step 1 – Enable Apps from Unknown Sources Step 2 – Enable ADB Debugging Step 3 – Install Downloader Step 4 – Enable JavaScript under the Download Settings step 5 tab – Type the following shortcut to download Mouse Toggle depending on what Fire TV device you are using – some Fire TV devices require Mouse Toggle 1.06 to work properly. Toggle Mouse 1.11 for Fire TV 1, Fire TV 2, Fire TV Stick 1, Fire TV Stick 2, Fire TV Cube: troypoint.com/mouse Mouse Toggle 1.06 for Fire TV 3, Fire TV Edition: troypoint.com/mouse106 Step 6 – Install Mouse Toggle when prompted Important Note: The Fire TV 3rd generation and Fire TV Cube has an error that affects the mouse position unless the display settings are set to 1080p 50Hz. This issue also occurs with a real hardware mouse. So a workaround until this is resolved is to adjust the display settings through the Fire TV settings (Settings – Display & Sounds – Display – Resolution – 1080p 50Hz). TROYPOINT TIP: Mouse Toggle and dozens of other applications are available within the TROYPOINT Rapid application installer. This app allows you to install the best streaming apps and tools in minutes instead of installing each APK one by one. Use the link below to access this free app. TROYPOINT Rapid App Installer troubleshooting tips: If Mouse Toggle doesn't start once you start it, go back to Fire TV Settings / Device / Developer Options turn off ADB debugging and then turn it back on. If the pointer does not appear after double-clicking the playback of the remote control, try again, but do it faster. Get your free TROYPOINT Supercharge Fire TV/Stick Guide and learn how to install Kodi and the best add-ons with one click. You'll enjoy thousands of movies, TV shows, sports and more! IMPORTANT: If you're trying to install unverified apps on your Firestick or Fire TV from the Amazon App Store, you can only complete it by downloading sideways or anything on your device without using the official app distribution method. I recommend using a VPN to install such applications. Click this link to learn how to install a VPN for Firestick, Fire TV, Fire TV Cube. Most cable cutters use a VPN and, rightly so, yes. The free streaming apps, add-ons, and paid IPTV services you use are often hosted on insecure servers. Without a VPN, your IP address is registering. Your IP address points to your location and identity, which compromises both your privacy and your security. Your current IP address is 2601:2c1:4080:a750:38c8:c6e0:e8db:2eb2 – When you use a VPN, your actual IP address will become a new anonymous one. A VPN will provide you with an anonymous Internet connection. This will prevent your Internet service provider, application/add-on developers, government agencies, and any 3rd party from recording what you are accessing online. The most popular VPN among power cutters is IPVanish due to its fast and dead-end speeds. It is important to use a VPN that is fast as we are transmitting large HD files. It's also crucial to find one that doesn't keep records of what your subscribers access while they're online. Setting up IPVanish VPN on your streaming device is simple! Step 1 Sign up for an IPVanish VPN account by clicking on the link below. This exclusive link offers you a great discount, only available to TROYPOINT visitors like you. Sign up for IPVanish Account & Save 73% Step 2 – Hover over the search icon on your Firestick, Fire TV or Fire TV Cube and type Ipvanih You can also find the IPVanish app in the Google Play Store for those of you who are using Android TV Boxes, phones and tablets. Step 3 – Click on the IPVanish VPN option that appears. Step 4 – Click the IPVanish icon in Apps & Games. Step 5 – Click Download. Step 6 – Click Open. Step 7 – Enter your username and password to log in. Your username is the email you used to register for the IPVanish service with and your password is automatically generated and emailed to you. Step 8 – Click the Connect button. Step 9 – Click OK for the connection request if it appears. Step 10 – You will notice that your IP address changes along with the location of the connection. You are now operating anonymously through your device. Click the home button on the remote control and the VPN will continue to run in the background. Congratulations! Now you're protected by a VPN, which means that everything you stream or access through your Firestick or Android TV Box is hidden from the of the world. If you ever need to stop the VPN service, simply restart the application and click the DISCONNECT button. Button. Button.
