## Unlock samsung galaxy s7 without losing data

I recently bought a new Samsung Galaxy S7 for my girlfriend and realized that we both enjoy the gadgets associated with this gadget. Usually I can play nice games on her cell phone, but she decided to stop me from using my games longer. So she used the lock screen password on her mobile phone to stop me from using my mobile phone without her permission. I tried various websites to unlock her phone without losing her mobile data all without success. I took to Google and still no result and then I tried other ways and succeeded. Here I am happy to share my experience with you. Part 1: How to unlock the S7 without losing dataNo Samsung phone without feature marked Find My Phone. You can use this feature to unlock your Samsung Galaxy S7 fingerprint, screen pattern, PIN and password. Follow these steps:Step 1: Sign in with your Samsung account. Step 2: Press the Lock Screen key. Step 3: Enter a new password in the first field. Step 4: Press the Lock button at the bottom. Step 5: Within minutes, it will automatically change your password to a newly created password.2. Using AndroidAndroid Device Manager device manager can also help if you are wondering how to unlock the S7 without losing data, however, it was expected that you enabled android device manager on your phone before taking these steps. Step 1: First, go to [www.google.com/android/devicemanager](http://www.google.com/android/devicemanager) your computer. Step 2: Access your Google Account on your locked phone. Step 3: You can select the device to unlock in the ADM interface. Then tap Lock. Step 4: Enter your password now. There is no need to enter a recovery message. Just click on Lock again. Step 5: When you're done, you'll see a confirmation using the Ring, Lock, and Fry keys. Step 6: Then you can enter this newly generated password on a locked Samsung phone. Step 7: Turn off your temporary password by scrolling to Lock screen settings on your device.3. Remove S7 Screen Lock from iMyFone LockWiper (Android)iMyFone LockWiper Android Lock Screen Removal is a tested program that can help you get rid of screen locks set by android device settings or by third-party lock apps. Please confirm Continuing. Now, after all, set, click on Start to bypass samsung lock screen without password. pic: Start removes screen lock Note: Removing the password on the lock screen will clear all Device. Please confirm before continuing. Pic: Remove the screen lock if you hope to unlock your Samsung Galaxy S7 without losing data, you can try using the find my mobile phone service provided by Samsung itself. Android has the same feature already available as a service called Find My Phone, but it's a Samsung brand that we're concerned about, so using Find My Phone can make your work easier. Here are some requirements you need to meet to use this service. You must have a Samsung account logged in to your Galaxy S7 before losing your screen lock password. The service is only available for Samsung Android phones. Follow these steps for a comprehensive solution: In your browser, go to find my phone.samsung and sign in if you haven't already. You must be logged in with this previously registered Samsung account. Pic: find my mobile phone On the screen you will see the registered phone on the left, along with a few tabs at the bottom left. You have the ability to locate, lock, ring and clean various features ready to work on your phone. Pic: Find my device Select Unlock screen on the left tab and tap Unlock in the middle of the screen. pic: unlock my screen You will witness a pop-up saying that your phone is unlocked. Now set a unique screen lock that you won't forget again. Pic: Phone is successfully unlocked It is important to establish a screen lock on Android phones so as not to allow intruders to access sensitive information. Sometimes you may be able to fix an issue where you no longer have access to your phone because its screen is locked. In such a terrible case, Android Device Manager is useful. Android Device Manager is not able to unlock any Samsung phone; please refer to the requirements in the following sections. You must have Android Device Manager turned on before it is blocked. In addition, GPS must be turned on for Android Device Manager to track your phone. ADM is not compatible with Devices running Android 4.4 or below. To connect to the Google Account you set up on your phone, you need an Internet connection, Wi-Fi, or cellular data. Start this process with the following tips: On Windows or a second mobile phone, go to the Android Device Manager web page. Sign in to the website with the same login information you have on your locked phone. In the Android Device Manager interface, select the specific device you want to unlock. Pic: Android device manager Select Lock. Where you want it, type a temporary password, confirm it, and forward it. You do not need to enter any recovery messages and this is optional. Lock button again. If everything is working correctly, you'll see a confirmation box. Now you are perfect to enter a temporary password to unlock your device. pic: new lock screen Finally, go to Set your Samsung phone's lock screen and turn off the pre-set temporary password. Now set a new password to protect your phone. Now relax! You have successfully unlocked your Samsung Galaxy S7. The above mentioned methods work efficiently as tested by our testers. You need to make sure that possible features are turned on when you use Android Device Manager and Find My Phone services. Tenorshare 4uKey for Android is a great tool if you do not meet all the requirements of Android Device Manager and Find My Mobile Phone. Be sure to delete your personal information while following the guides above. From the next time you make sure that you have all the required PIN, Password and Pattern saved in the drive or written in documents where you can have access at any time necessary. Necessary.
