Read books on your phone, create and share your reading list. There are hundreds of cool paracord projects floating around the prepper and survival community. We've gathered 101 of our 550 favorite projects for you to get stuck with. There really is something for everyone in this article. Whether you're looking for cords or belts, survival bracelets or a keychain, we even have paracord dog collars and gun slings! CLICK HERE: FREE DOWNLOAD: GRAB A PDF VERSION OF THIS GUIDEDownload is a list of items you'll need before you start your first project. This list is designed to help you prepare and plan ahead... exactly what the preparers do @Paracord Jig – This is the first thing I suggest you start, see the video below for instructions. – Make sure they are good and sharp, cloth scissors works very well. Lighter – this is used to seal the ends of the cut paracord to prevent you from wearingClips and Buckles – depending on the chosen paracord chosen you will need something to keep the finished product together The cutting mat – this is crucial if you want to avoid destroying your furniture or kitchen counter knife – any sharp blade of some kind will make making a Paracord JigUsing a jig for your paracord designs is a very good idea. mostly it will save you a ton of time and if you're like me when it comes to fiddly stuff I'm all fingers and thumbs up. This video shows you how to make your own paracord feedback. How To Found ParacordShendo how to merge paracord ends together will save a ton of time later on your projects. This video shows the best way to do this. Be sure to check the Permalok Thread Needles later. SO let's start this marathon of 101 Paracord Projects with take a look at some Knots, Weavings and Braids. Later, we see:Section 3 - We, Weavings & BraidsSection 4 – Pet ProjectsSection 5 – Just For FunSection 6 – Survival ProjectsSection 7 – Homelife ProjectsSection 8 – Tools & Gear ProjectsSection 9 – Weapon ProjectsSection 10 – Clothing ProjectsSection 11 – ReferencesParacord FAQFirst off let's take a look at some of the frequently asked questions above. Specifically what it is, why it is used and where it comes from. What is Paracord? The main type of paracord used is known as 550 paracord, which means it has been tested to hold a load weight of up to 500 lbs. Your inner makeup consists of 5 or 7 strands along with an outer nylon, this is what gives you its strength and durability. Its typical use is for the suspension lines of for tats. However, today it is also used as an all-purpose provision in many prepper and survival packages. Different types of Paracord When buying cable for your projects, you should be aware that you you Looking to make sure you buy the right things. Since the paracord boom, there are many cheaper versions of China that have flooded the market. They are of lower quality and often have not had their load voltage tested properly. Therefore, they can break under tension and when you need it most. To avoid making these mistakes, here are some useful tips you can use to buy by:Rule 1 – Make sure you have at least 7 wires, some even have 8. The 5-wire material is generally of lower quality and obviously not so strong. Rule 2 - Where does it come from? I'm all about buying Made in the US products, the reality is that most of our goods come from China due to labor rates. Check out the seller and see their feedbacks if using auction sites or Amazon.Rule 3 – Do they offer entire reels? If they offer only short lengths and you can't buy a full reel of 100 feet or more, chances are that they are an intermediary and increasing their price by providing shorter lengths of a full reel that they bought wholesale. If you follow these simple rules, you should be very well and happy with your purchase. Which brings us to... Where to Buy ParacordThere are several options to buy the right type of paracord. You can try eBay – however, this is more of a potluck option sometimes you can go to Amazon – better results and less chance of buying the wrong cordage You can use a well-known supplier that we use personally. Here are our recommended suppliers:ParacordGalaxy.comParacordPlanet.comTheParacordstore.comParacord.comUses for ParacordBoth Military and civilians have taken paracord due to their unlimited strength and uses. For example, threading beads into a paracord length to make a pacer or ranger beads is a great way to count your steps and navigate in low visibility. Some more uses include replacing the watch strap with a paracord watch band, there are numerous paracord bracelet designs, including this one that includes a fire match. Then there's the less tactical and more fun design you can do, like paracord dog toys, seat swings and phone boxes. Then we go to the meaty end of paracord designs. Weapons, these include monkey fists, kubotan's, rock slings, and survival bows. First, let's take a look at some of the various knots, wefts and braids. Before you start, click here: FREE DOWNLOAD: GRAB A PDF VERSION OF THIS GUIDEDownload is a list of items you'll need before you start your first project. This list is designed to help you prepare and plan ahead... exactly what the preparers do @Paracord Jig – This is the first thing I suggest you start, see the video below for instructions. – Make sure they are good and sharp, cloth scissors works very well. Lighter – this is used to seal the ends of the cut paracord to prevent you from wearingClips and Buckles – depending on the chosen paracord chosen you will need something to keep the finished product together The cutting mat – this is crucial if you want to avoid destroying your furniture or kitchen counter knife – any sharp blade of some kind will make making a Paracord JigUsing a jig for your paracord designs is a very good idea. mostly it will save you a ton of time and if you're like me when it comes to fiddly stuff I'm all fingers and thumbs up. SO let's start this marathon of 101 Paracord Projects with take a look at some Knots, Weavings and Braids. Later, we see:Section 3 - We, Weavings & BraidsSection 4 – Pet ProjectsSection 5 – Just For FunSection 6 – Survival ProjectsSection 7 – Homelife ProjectsSection 8 – Tools & Gear ProjectsSection 9 – Weapon ProjectsSection 10 – Clothing ProjectsSection 11 – ReferencesParacord We, Weaves, and BraidsThere are many different types of knots and wefts used in paracord designs, new designs are revealed every week by those heavily involved in the hobby of doing things using paracord. The list below offers some of the most used knots, wefts and braids:(these are more to show than practical use!) 1) Centered Stitch Weave I really like this stitch design as it is different from all the other survival bracelets you see out there. Now the red cord is obviously not to cord buy you could use a strong dyneema or thin kevlar paracord to give the same effect.2) Dragon Tongue This certainly has teeth, in fact I would have called Dragon Teeth weave if I had the choice! Using a mix of 2 paracords of different colors can give some good results.3) Zipper Weave Probably one of the cleanest paracord bracelets you'll see. This design is well woven with a clean fastener/buckle that does not take away the aesthetics. I would recommend that you make a paracord feedback to do this. It really recommends that you dip yours to allow it shrinks, which makes measuring the correct length more accurate.4) Nautical Bracelet For all water lovers out there, this design is super easy to make and again looks different from all the other survival bands you can buy. Here's a good video and the instructional link above doesn't do a great job of explaining exactly what's going on... In addition, it tripa the paracord by removing the internal wires, making the cord useless in a survival situation!5) Corkscrew Paracord Survival BraceletThis braid also looks exactly as the name suggests. I different from with the paracord to achieve a different look and feel. Also, I would say that this method would use less In 2012, 62% of U.S. households have a pet. In the same year we spent over \$50 billion on these pets! Since then, these numbers have increased, so there is a good chance you have a pet and you understand how expensive they can be. Making your own products, collars, necklaces and toys can save a lot of time. In addition, they can face the most difficult treatments! Below we have a selection of cool paracord pet paracord designs that you can undertake and a few hours or less. They are practical and you will learn some great skills along the way.6) Dog Slip CollarIn the closet I have a bag, it's my GOOD BAG (Get Out Of Dodge) and I use it for emergencies in the middle of the night, like a house fire etc. Hanging from the outside is one of the paracord dog slip collars. I prefer this type of collar to regular clip collar for a number of reasons, being the main its ease of use and speed to get into the dog. When you're in a hurry, you don't want to be getting in the way of clips and necklaces. 7) The Love of Dog ToysDog for biting and chewing, they also love to play, no matter the age. What better way than to treat man's best friend than to impregnate him from some paracord dog toys? 8) Dog collarFor daily use, my dog has a leash and a clip on the leash. However, once we stay away from the main roads etc I take it out of the rent and it is free to roam. Having one of these quick release collars allows me to take it off and continue without taking off the collar. Plus, it's more of an emergency supply of 550 paracord when you need it. It could even fold like a slip collar if necessary, unraveling. 9) Dog HarnessSomem walks better in a harness, smaller dogs that can pull and damage the neck are suitable for this style of harness. It would be a good idea to add some fillers under the leg areas to avoid rubbing too much when they walk.10) Halti Dog CollarEsis is my favorite of all pet designs. This Halti is similar to what I used when training my Spaniel (which looks exactly like the one in the photo!) to ride in the lead to the heel. Who says paracord projects have to be about survival and preparation? What about the practical side of these little DIY exercises? The skills you can learn and the everyday items you can do when you simply have no other option is vital. Prevent boredom when SHTF will be a vital skill if you have children (or you're just a big kid)! Check out some of these designs for a mix of household, cool and practical items.11) Granada Paracord KeychainThey look cool and pack a good amount of cordage for when you need them. that won't help you knock down a stone face, but can tie a wound, replace broken boot shoelaces or but used to whip. 12) Paracord WalletI really like this and it never occurred to me that you could make a paracord wallet. I like the use of the 2 colors that really makes the portfolio stand out. De De you could just use all the black cable and make an uber tacticalool looking © 13) Plastic Disposable Lighter A little gimmicky, but it still has its uses. I love the karabiner accessory too, which means you can hook this into your pants or belt. Wrapping it in the paracord you add grip and increase the width so it is no longer so difficult. 14) Keychain with Secret CompartmentThis is a cool project for your keychain and really is part of my EDC kit (Every Day Carry). Curled tight, you can put a couple of notes there for emergencies and also side a couple of fishing hooks and weights in the middle for if things really go south. 15) The Use of LaptopEss is practical for today's office worker and student. This harness laptop paracord packs in a lot of cordage and is a good project started as you will learn some of the skills and we needed for bigger projects. 16) Paracord Army MenAnother fun and something cool to add to your desk are these army figures made of... You guessed it, PARACORD! 17) Steering Wheel WrapI got my everyday vehicle which is quite new and great, BUT I love my old truck. It's a beast of a machine and it never let me down. The problem is it's getting tatty around the edges, ok more than tatty. This steering wheel wrap will do the job to hide this and add a grip element back to the steering wheel. 18) Crochet Pen HolderA practical household utensil that can sit at your desk out of the way unless it is necessary. I would put this in the do this category to avoid boredom at a shft event. 19) Paracord HeadbandA great if you are a woman or have girls yourself. You can use all the colors you want and the simple thread in the middle makes it look less military and more feminine. 20) Pocket Phone is always dropping my phone or leaving it on my lap and then standing for it to fall to the ground. I've broken countless phones, and now I've got a pretty robust case. Adding a paracord phone pocket is another level. Heck, you could even add this to a Molle setting and have it on your strap or shoulder straps. 21) iPhone Sleeve3)Again as above just this time a tight weaving is used to create a blanket effect, perfect for your smartphone or even to use as a possible bag. I love the karabiner accessory too, which means you can hook this into your pants or belt. CLICK HERE: FREE DOWNLOAD: GET A PDF VERSION OF THIS GUIDE Where would any paracord roundup be without a section on paracord survival projects? These projects were what initially attracted me to paracord, it didn't take long for me to understand how practical some of these items can be. If you are always in need of cordage, this paracord or keychain bracelet does not one more fashion accessory, but a survival item.22) Adjustable Survival BraceletThis is a simple design that is within reach of beginners. Does not require special buckles or it's because he wears a snake weaving bracelet. You can see the very detailed instruction of IntenseAngler on youtube below. This is a great project for scouts. Survival bracelet with fire initiation Having the ability to make fire in a survival situation can be the difference between life and death. This smart guy came up with a way to carry this medium of fire inside a paracord23 survival bracelet) Survival Bracelet With Fire Starter #2This one follows from the above really, to give you some different ideas so you can create your own design that works for you and your situation. I really like the use of the buckle and the fire material here. Also, he even added a mini compass!24) Quick Deploy Parafobl has these Parafobs in all my backpacks, especially on the zippers. The other place is in some of my Nalgene. Check out the video below the MeZilch YouTube channel. MeZilch states this about its design:My design is made to be a utility supply of EDC cordage, not a permanent ornament of keychain, and because it is SUPER fast to use and then re-store when done, I think it is a much more convenient way to carry and store paracord, compared to a typical, survival bracelet fabric that takes much longer. Although I carry it primarily for fast, everyday tasks, it's also available for emergency/survival situations, and since it's not necessary to weave or unravel in your construction or deployment, it's super easy to learn, use and teach others, as spectators who often seem impressed with how quickly you've gone from tob to rope.25) Survival Tin PouchDo you have a survival can (like a Altoids can) to maintain survival speed? If not, then you should think about it, since they can fit almost anywhere. Once you do that, then you can do it. Or, if you just want a cool way to store your bullets. 26) Trap TrapThis is a quick setup for a trap and will probably take less than 30 minutes to set up. Now, once you get the hang of it, you can set a trap in about 15 minutes. This speed is important because you will need to mount several of these traps. Look for areas that are travel paths for your prey and put the traps there for the greatest chance of success.27) Survival Fishing BraceletIprobably one of the best videos I've ever seen. It leans very strongly to the fishing side in your videos, but this is an ideal survival tool when you need to feed in the desert.28) Paracord Climbing HarnessThis climb can definitely be used if you are in a pinch... However, it seems to be very If you need a harness and you have about 15 feet of paracord, then this fits the bill. 29) Survival Fishing Kit BraceletTry adaptable fishing equipment is a great addition to any survival situation. If you don't have room to load the kit outlined here, then then it's a good compromise. Brought to you by Intenseangler and his youtube channel... This plan requires 550 cables, 7 wires that you should be familiar with right now. You also need 25 feet of fishing line, weights and hooks. So technically, you don't need to have the fishing line and can use the internal wires of the paracord, you should have the fishing line if possible.30) Paracord SlingYou can use this sling for a rifle and that's what Dale K. does in his explanatory video below. It's a bit confusing at first, but quite simple when you get.31) Emergency Firestarter LanyardEveryone knows you need fire whether you're stranded, lost or in any kind of survival scenario. Matt C describes and demonstrates how easy it can be to make a simple rope.32) Quick deployment braceletThis quick deployment bracelet does exactly what it says in the title. It is designed to provide paracord when you need it, with zero cutting, just a few pulls and its done. A perfect EDC item. 33) Pocket paracord dispenserThis dispenser is a great idea for both the projects you are building and to carry with you or in your go-bag. Depending on the size of the container you choose, you can pack a serious amount of cordage into one of these things. And like the quick deployment bracelet above, it provides instant access when you need it most. 34) Paracord tape keychain would risk a guess and say you have some kind of duct tape in your bug bag or even on your EDC? Well, why not combine or the first two loves? Paracord & Duct Tape to make this amazing little support/survival item? 35) USB Paracord BraceletIt's one step above the regular survival bracelet and although it uses less cable (you could do more if you wanted), it is very practical. You should have all your important documents, contact details and treasure memories stored on several of these small USB devices. You can then keep it with you all the time by wrapping it in this survival bracelet. 36) Paracord Fishing LureWhen I first say this I thought Doh... Why didn't I think of that? I mean, it's so simple to do, you could just get them pregnant on time when you need them. In fact, I would include some paracord in your survival fishing kit. 37) Compass BraceletOrsyour good survival bracelet utilities, this time going all over Rambo and adding a small compass. This is great for wild adventures, I mean, I'm not sure you'd need it in an urban environment, but you never know. 38) Firesteel WrapThis design uses a can of coca to demonstrate, however, you could easily expand this design and create a higher Koozie to hold your Nalgene bottles or military canteens. To suit your style and needs or just make a couple of fun for kids. 40) Double monkey handle markThe monkey handle while used a gun can also bend up as a cool legal marker reduced in size. If you are thinking of doing the larger version for self-protection, this would be a good place to start and learn the necessary knots. 41) Network in a Nalgene BottleI love camping network, my first network was a simple network setup that was actually very comfortable despite being very cheap. I've always thought about making my own network, and what could be easier than using paracord? This tutorial looks like a hammock and also the bottle used to hold it. So not only can you carry water, but also keep your sleeping arrangements, combines with a few climbing clips and a roll of duct tape. Talk about multipurpose items. 42) Paracord iPhone Cable WrapI don't know why you'd like to do this, but at least one of team PrepperZine likes this idea! I think it's a good way to practice for other larger projects and makes your cables look cool. 43) Drawstring bag This type of bags are great if you are traveling long walking distances. They allow you to load any equipment you need, however I prefer to add my wet equipment to it. Towels, clothes and my shelter etc. The design allows for a lot of airflow that will help dry your kit ready for your next use. 44) Permalok Threading Needles Some of the designs you'll find in this article require some nifty manual work and thread. Well, these needles will make this a lot easier and they are also super easy to do. 45) Paracord TrivetsWhy not bring a color but to your dining table with these paracord trivets? They are a great rainy Sunday project and are fun to do, so involve the kids. 46) Hammer HolderI terrible to put a tool down and forget where I put it. Making any repairs after the SHTF will be difficult enough without losing your tools. These little paracord hooks will put an end to it and allow you to always have your tools handy by attaching them to your belt. 47) Pot Holder/WrapOuter home design which is also practical. Pan supports made of paracord allow you to remove pans without using oven gloves or a towel. 48) Beer bottle carrierS are great for camping fire. This beer bottle carrier offers a quick release buckle for when you're really seated! 49) Paracord CrossE you are religious, this is a good addition to your keychain and servers two purposes. It shows your faith and is also practical in an emergency. (use colors to your liking!) 50) Id Badge lanyardAnd you have a survival group/prepper and have plans to come together when tsht so it might be a good idea to have each member carrying an ID badge contains vital information. Name, skills, blood type, passwords etc. These paracord strings are exactly what is needed these badges. Of course, you could use it for daily office use too! 51) Paracord Camera StrapAnother other practical design for a everyday item. This camera strap adds a little more stability to fragile straps that come with the camera. CLICK HERE: FREE DOWNLOAD: GRAB A PDF VERSION OF THIS GUIDENow we find ourselves in the section that combines weapons and tools with amazing paracord designs that are fully practical. There's something in this section for everyone from old ladies to coasters, compression straps to snow shoes! If it is a tool and can be improved with paracord is here.52) Paracord Bull WhipThis design is for a massive whip. It is more than 2 feet long, plus another foot for the biscuit at the end. That said, the bull whip will make Indiana Jones jealous. It is not a good project for a beginner as it will take a long time compared to some of the simplest projects. If you assume this, take your time. And also let me know in the comments! Time: More than 4 hours depending on your skills.54) Paracord Rifle SlingThe driver to design this sling was the price of paracord straps that are for sale online. They're a little expensive, and you can make one for the cost of about 100 feet (or less) of paracord. Don't forget that you need some spins to attach to your rifle. 55) Backpack StrapsConsidering this is the first paracord project that this guy did, he did a great job on his alic package. The straps are thinner and will lighten the load of your package while providing some cordage in case you need them.56) Paracord Bottle NetThis is another great project for a beginner. It's basically a Nalgene bottle holder and you can get us into anything about that size. I have one for a SIGG bottle too. Anyway, this should be a fairly quick paracording session. 57) Lanyard NeckAs the cord presented in the previous section, this is done with a break-free buckle, which means that if you were caught in something or someone was going to pull it, it will fall apart and you can break free. Unlimited uses, I like this for a neck-sized knife. 58) LanyardI sunglasses lost count of how many pairs of sunglasses I broke sitting on them or smashing them in my pocket! This rope is designed to keep them around your neck so you never miss or break them. 59) Bundle Compression Strap & HandleThis image reminds you to be of an old army mattress, when all you need for a decent night's sleep outdoors is wrapped in a long roll of thing. This paracord compression bracelet is ideal for such a configuration and also has a strap to facilitate the I vet they would like them to have it back in the past! 60) Paracord Snow ShoesDepending on where you live, heavy snowfall may be likely for many many You. Even if you are backpacking and getting stuck in a snowblizzard, being able to walk any kind of distance over the snow will require snow shoes. Of course, you do not need to buy pieces of wood purchased as in this tutorial, you can always use tree branches or whatever is at hand. A cool ability to learn how to get you out of a complicated situation. 61) Leatherman PouchThe Leatherman tool is one of the most popular pocket tools on the market. There are so many of them that you will need to adjust the size of your bag to suit, which is as simple as creating a cardboard model. If you follow this tutorial, be sure to include the strap on the back to cut the belt or web. 62) Bow SlingE you do any kind of bow hunting, so you will know loading your bow over a long distance can be tiring... Although we don't© esso sling of paracord wrist will help you load your bow with ease. It also looks pretty cool too even though the creator uses wood stain to dye his leather??? 63) Water bottle harnesses is a simple but effective design, which can facilitate the transport of a water bottle. There is also another use that I thought of for this and that is to use the harness to suspend the bottle under running water or a rain catchment system if you are stranded or in need of water quickly. 64) Multitool PouchI always carries my little multitool on my car keys, and it stands out as a sore thumb being stainless steel and shiny. This little bag will help hide the tool and also looks really cool! 65) Paracord BandoilerWhy buy a store bought a product when you can make your own? This paracord bandit will carry your bullets (how many is up to you) for any weapon. It's super simple to do too. 66) Wrap the knife handle If you like to make knives and have party ing bullets out there, this is a great design to practice making your own knife handle wraps. The reason I love wrapping my tools in paracord is for 2 reasons.1) It adds extra grip when cutting, swinging and loading.2) It's multipurpose in that I can remove it at any time to use on another item. 67) Axe Handle WrapS up, this time for an axe handle that looks even better than the knife I should say. If you leave some extra yarn at the end, you can also loop to tie the axe on your wrist and also tie it out of your insect bag. 68) EDC BagThis is a slined bag for your EDC items. Depending on the size you make, you can sote all kinds of items here. From fire start equipment to a small fishing kit, to a torch and your money home. 69) Flashlight WrapI did this project myself on my Mini Maglite and it looks great. It's a weaving to build once you start and there are a number of ways you can finish it depending on your personal use, 70) Nalgene Cap Paracord FixEsis is a cool paracord trick to ensure you lose your nalgene bottle cap again. It makes it easier to drink and faster to have a drink on the go as you're not fumbling around with a cap in your hands. 71) Shotgun SlingPersonally I would have done this sling in black or camouflage color, but that's just my taste. That looks like a very well done shotgun sling and I can certainly see the benefits of it. Although not very opsec, you can choose your own color based on your environment. 72) Flashlight carrying beltThis is a little novelty, but can be useful if you are carrying many items and need a quick handle for your torch. When investigating dark places it is easier to load and rotate with the handle than just holding the torch by hand. 73) Quick release paracord holder If you pack a paracord package in your insect exit bag (if not you should be!) then keeping it clean and preventing it from getting tangled is important. This quick release paracord belt/compression bracelet will do exactly the job. 74) Paracord Snow GripsIn icy conditions, you can whip a set of snow grips with ease using only paracord. I myself have not experienced this, but I think I will come this winter, because the rubber and metal ones I have are terrible! 75) Paracord DonutThis is my preferred method for storing paracord in my packaging. It does not pick up and it is easy to store inside the top pocket reach when you need. I always take it with me when I go hiking and also keep a paracord donut in the truck. Simple
